

THESIS
ON
MULTIPLE HYPERGEOMETRIC FUNCTIONS AND THEIR
APPLICATIONS IN STATISTICS
PRESENTED

FOR THE DEGREE OF
DOCTOR OF PHILOSOPHY
IN MATHEMATICS
OF

BUNDELKHAND UNIVERSITY, JHANSI (U.P.)
INDIA

BY

Dramod Kumar Vishwakarma
M. Sc.

RESEARCH ASSISTANT

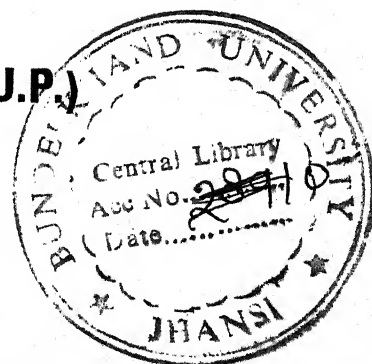

D. V. POST GRADUATE COLLEGE, ORAI-285001, U.P.

SUPERVISOR

Dr. R. C. Singh Chandel

D. V. POST GRADUATE COLLEGE, ORAI-285001, U.P.

1992

C E R T I F I C A T E

This is to certify that Mr. Pramod Kumar Vishwakarma actually carried out the work described in this thesis under my supervision at D.V. Postgraduate College, Orai (Jalaun). He has put the required attendance in the department during the period of his investigations.

Dated : 15/11/92 (Dr. R.C. Singh Chandel)

PREFACE

The present work is the out come of the further developments and extensions of researches done in the field of Multiple Hypergeometric Functions by me , under the research project " Multiple Hypergeometric Functions and their applications in Statistics " sponsored by Council of Science and Technology, U.P. Lucknow . , India. at D.V. Postgraduate College, Orai, U.P. India.

The thesis includes nine chapters. Every chapter is divided into several sections (Progressively numbered as 1.1, 1.2 , ... ,) , The formulae are numbered progressively within each section, e.g. , 6.3.9 refers to equation (9) of section 3 in chapter VI . References of the research works of other mathematicians are given in an alphabetical order at the end of every chapter.

First, I wish to express my deepest and sincerest feelings of graditude to Dr. R.C. Singh Chandel, M.Sc. Ph.D., Department of Mathematics, D.V. Postgraduate College Orai, U.P. , under whose kind supervision this thesis is being submitted , but for whose worthy guidance and encouragement it would not have been possible for me to accomplish my purpose.

I like to express my sincere thanks to Council of Science and Technology, Uttar Pradesh, Lucknow , and the authorities of Postgraduate College Orai for providing the necessary facilities to me during my present research work.

INTRODUCTION

CHAPTER I

I N T R O D U C T I O N

In the present chapter, we give a brief historical account of the work done so far in the field of " Multiple Hypergeometric Functions and Their Applications in Statistics ". No effort has been made to reproduce the complete and up-to-date history of the subject but only those points which have a direct connection with our work have been dealt with in some detail .

1.1 Hypergeometric Functions of One Variable.

The Gaussian Hypergeometric Series. In the study of second order linear differential equations with three regular singular points, there arises the function

$$(1.1.1) \quad {}_2F_1[a, b; c; z] = \sum_{n=0}^{\infty} \frac{(a)_n (b)_n}{(c)_n} \frac{z^n}{n!}, \quad c \neq 0, -1, -2, \dots$$

The above infinite series obviously reduces to the elementary geometric series

$$(1.1.2) \quad \sum_{n=0}^{\infty} z^n = 1 + z + z^2 + \dots$$

in the special cases when

$$(1.1.3) \quad (i) \quad a = c \quad \text{and} \quad b = 1 ; \quad (ii) \quad a = 1 , \quad \text{and} \quad b = c .$$

Hence it is called the hypergeometric series or more precisely, Gauss's hypergeometric series after the famous German mathematician Carl Friedrich Gauss (1777 - 1855) , who in the year 1812 introduced this series into analysis and gave the F - notation for it .

By D' Alembert ratio test, it is easily seen that the hypergeometric series in (1.1.1) converges absolutely within the unit circle, that is, when $|z| < 1$, provided that the denominator parameter c is neither zero nor negative integer. If either or both of the numerator parameters a and b in (1.1.1) is zero or negative integer , the hypergeometric series terminates and therefore, the series is automatically convergent.

Also series ${}_2F_1$ in (1.1.1) , when $|z| = 1$ (i.e. on the unit circle) is

- (i) absolutely convergent if $\operatorname{Re}(c-a-b) > 0$,
- (ii) conditionally convergent if $-1 < \operatorname{Re}(c-a-b) \leq 0$, $z \neq 1$
- (iii) divergent if $\operatorname{Re}(c-a-b) \leq -1$.

In case (i) we are led to the well known Gauss's summation theorem :

$$(1.1.4) \quad {}_2F_1 \left[\begin{matrix} a, b \\ c \end{matrix} ; 1 \right] = \frac{\Gamma(c) \Gamma(c-a-b)}{\Gamma(c-a) \Gamma(c-b)} , \quad \operatorname{Re}(c-a-b) > 0 ,$$

$c = 0, -1, -2, \dots$

As an its special case we have the summation formula

$$(1.1.5) \quad {}_2F_1 \left[\begin{matrix} -n, b; c; 1 \end{matrix} \right] = \frac{(c-b)_n}{(c)_n}, \quad n = 0, 1, \dots, \\ c \neq 0, -1, -2, \dots,$$

which is identically equivalent to Vandermode's convolution theorem :

$$(1.1.6) \quad \sum_{k=0}^n \binom{\lambda}{k} \binom{\mu}{n-k} = \binom{\lambda+\mu}{n}, \quad n \geq 0,$$

λ, μ being any complex numbers .

For a number of summation theorems for the hypergeometric series (1.1.1) , when z takes on other special values one can refer to Bailey [3, pp. 9 - 11] , Erdélyi et al. [19, pp. 104 - 105] , Slater [86, p. 243] and Luke [48, pp 271 - 273] .

Generalized Hypergeometric Series . The natural generalization of above Gaussian hypergeometric series ${}_2F_1$ is given by the series

$$(1.1.7) \quad {}_pF_q \left[\begin{matrix} a_1, \dots, a_p; \\ b_1, \dots, b_q; \end{matrix} z \right] = \sum_{n=0}^{\infty} \frac{(a_1)_n \dots (a_p)_n}{(b_1)_n \dots (b_q)_n} \frac{z^n}{n!} \\ = {}_pF_q \left[a_1, \dots, a_p; b_1, \dots, b_q; z \right],$$

which is called generalized Gauss series, or simply, the generalized hypergeometric series . Here p, q are positive integers or

zero (interpreting an empty product as 1) , and we assume that the variable z , and parameters a_1, \dots, a_p and b_1, \dots, b_q take on complex values , provided that

$$(1.1.8) \quad b_j \neq 0, -1, -2, \dots; j = 1, \dots, q.$$

If any parameter of numerator is zero or negative integer then ${}_pF_q$ will be terminating series i.e. it will be automatically convergent, if no parameter of numerator is neither zero nor negative integer and (1.1.8) holds, then the series ${}_pF_q$ in (1.1.7)

- (i) converges for $|z| < \infty$ if $p \leq q$
- (ii) converges for $|z| < 1$ if $p = q+1$ and
- (iii) diverges for all z , $z \neq 0$, if $p > q+1$

Further more , if we take

$$(1.1.9) \quad w = \sum_{j=1}^q b_j - \sum_{j=1}^p a_j$$

then the series ${}_pF_q$, for $p = q+1$, is

- (I) absolutely convergent for $|z| = 1$ if $\operatorname{Re}(w) > 0$,
- (II) conditionally convergent for $|z|=1$, $z \neq 1$, if $-1 < \operatorname{Re}(w) \leq 0$ and
- (III) divergent for $|z| = 1$ if $\operatorname{Re}(w) \leq -1$.

An interesting further generalization of the series ${}_pF_q$ was given by Fox [29] and Wright ([110], [111]), who studied asymptotic expansion of the generalized hypergeometric function ${}_p\Psi_q$.

1.2 Hypergeometric Series in two Variables. The success

of the theory of hypergeometric series in one variable has stimulated the development of a corresponding theory in two or more variables.

Appell [1, p. 296] has defined the four double hypergeometric series F_1 , F_2 , F_3 and F_4 (known as Appell series) analogous to Gauss's ${}_2F_1[a, b; c; z]$.

The standard work on the theory of Appell series is the monograph by Appell and Kampé de Fériet [2], which contains an extensive bibliography of all relevant papers upto 1926 (by, for example, L. Pochhammer, J. Horn, É. Picard, É. Goursat). See Erdélyi et al. [19, pp. 222 - 245] for a review of a subsequent work on the subject; see also Bailey [3, chapter 9], Slater [86, chapter 8] and Exton [27, pp. 23 - 28].

Horn puts

$$f(m, n) = \frac{F(m, n)}{F'(m, n)}, \quad g(m, n) = \frac{G(m, n)}{G'(m, n)},$$

where F, F', G, G' are polynomials in m, n of respective degree p, p', q, q' . F' is assumed to have a factor $m+1$, and G' a factor $n+1$; F and F' have no common factor except possibly $n+1$. The greatest of the four numbers p, p', q, q' , is the order of the hypergeometric series of order two and found that, apart from certain series which are either expressible in terms of one variable or ^{are} products of two hypergeometric series, each in one variable, there are essentially thirty four convergent series of order two (Horn [32] corrections in Brorngässer [5]).

Horn Series . Horn [32] defined ten hypergeometric series in two variables and denoted them by $G_1, G_2, G_3, H_1, \dots, H_7$; he thus completed the set of all possible second order (complete) hypergeometric series in two variables of Appell and Kampé de Fériet [2] (see also Erdélyi et al. [19, pp. 224 - 228]).

Confluent Hypergeometric Series in Two Variables.

Seven confluent forms of the four Appell series were defined by Humbert [33] and denoted by. $\Phi_1, \Phi_2, \Phi_3, \Psi_1, \Psi_2,$

$$\Xi_1, \Xi_2$$

In addition to above, there exist ~~thirteen~~ more confluent forms of the Horn series denoted by (Horn [32] and Borngässer [5]) :

$$\Gamma_1, \Gamma_2, H_1, \dots, H_{11}.$$

The work of Humbert has been described reasonable fully by Appell and Kampé de Fériet [2, pp. 124 - 135], and the definitions and convergence conditions of all of these twenty confluent hypergeometric series in two variables are given also in Erdélyi et al. [19, pp 225 - 223]. The definitions of Φ_1, Φ_2 and Ξ_2 , given in Erdélyi et al. [op. cit. p. 225, equations (20), (21), and p. 226 equation (26)] are in error,

Here we recall the corrected definition of Φ_1 and Φ_2 (the confluent forms of Appell function F_1) and for the sake of brevity, we delete the definitions of similar confluent forms $\Phi_3, \Psi_1, \Psi_2, \Xi_1, \Xi_2$, of the remaining Appell series F_2, F_3 and F_4 :

$$(1.2.1) \quad \Phi_1 [a, b; c; x, y] = \sum_{m, n=0}^{\infty} \frac{(a)_{m+n} (b)_n}{(c)_{m+n}} \frac{x^m}{m!} \frac{y^n}{n!}, \quad |x| < 1, \quad |y| < \infty;$$

$$(1.2.2) \quad \Phi_2 [b, b'; c; x, y] = \sum_{m, n=0}^{\infty} \frac{(b)_m (b')_n}{(c)_{m+n}} \frac{x^m}{m!} \frac{y^n}{n!}, \quad |x| < \infty, \quad |y| < \infty;$$

In addition to above confluent forms of Appell series all thirteen confluent forms viz. $\Gamma_1, \Gamma_2, H_1, H_2, H_3, H_4, H_5, H_6, H_7, H_8, H_9, H_{10}, H_{11}$ of the Horn series are also appeared in the literature due to Erdélyi [19]

Kampé de Fériet Series and its Generalization

Just as the Gaussian Series ${}_2F_1$ was generalized to ${}_pF_q$ by increasing the numbers of parameters in denominator and numerator, the four Appell series were unified and generalized by Kampé de Fériet [35], who defined a general hypergeometric series in two variables (see also Appell and Kampé de Fériet [2, p. 150, eq. (29)]).

The notation introduced by Kampé de Fériet [loc. Cit] for his double hypergeometric series of superior order was subsequently abbreviated by Burchnall and Chaundy [6]. For more general double hypergeometric series (than the one defined by Kampé de Fériet) in a slightly modified notation, one may refer to, Srivastava and Panda [97, p. 423, eq. (26)]. A further generalization of the modified Kampé de Fériet series was given by Srivastava and Daoust [94], who indeed defined the extension of the ${}_p\Psi_q$ series of Fox [29] and Wright ([110] and [111]), in two variables.

1.3 Triple Hypergeometric Series. Lauricella [43, p.114]

introduced fourteen complete hypergeometric series in three variables of the second order denoted by the symbols $F_1, F_2, F_3, \dots, F_{14}$ of which four series F_1, F_2, F_5 and F_9 correspond respectively to the three variables Lauricella series $F_A^{(3)}, F_B^{(3)}, F_C^{(3)}$ and $F_D^{(3)}$ defined by

$$(1.3.1) \quad F_A^{(3)} [a, b_1, b_2, b_3; c_1, c_2, c_3; x, y, z] \\ = \sum_{m,n,p=0}^{\infty} \frac{(a)_{m+n+p}}{(c_1)_m} \frac{(b_1)_m}{(c_2)_n} \frac{(b_2)_n}{(c_3)_p} \frac{x^m}{m!} \frac{y^n}{n!} \frac{z^p}{p!}, \\ |x| + |y| + |z| < 1;$$

$$(1.3.2) \quad F_B^{(3)} [a_1, a_2, a_3, b_1, b_2, b_3; c; x, y, z] \\ = \sum_{m,n,p=0}^{\infty} \frac{(a_1)_m (a_2)_n (a_3)_p}{(c)_{m+n+p}} \frac{(b_1)_m}{m!} \frac{(b_2)_n}{n!} \frac{(b_3)_p}{p!} \frac{x^m}{m!} \frac{y^n}{n!} \frac{z^p}{p!}, \\ |x| < 1, |y| < 1, |z| < 1;$$

$$(1.3.3) \quad F_C^{(3)} [a, b; c_1, c_2, c_3; x, y, z] \\ = \sum_{m,n,p=0}^{\infty} \frac{(a)_{m+n+p}}{(c_1)_m (c_2)_n (c_3)_p} \frac{x^m}{m!} \frac{y^n}{n!} \frac{z^p}{p!}, \\ |x|^{\frac{1}{2}} + |y|^{\frac{1}{2}} + |z|^{\frac{1}{2}} < 1;$$

$$(1.3.4) \quad F_D^{(3)} [a, b_1, b_2, b_3; c; x, y, z] \\ = \sum_{m,n,p=0}^{\infty} \frac{(a)_{m+n+p}}{(c)_{m+n+p}} \frac{(b_1)_m}{m!} \frac{(b_2)_n}{n!} \frac{(b_3)_p}{p!} \frac{x^m}{m!} \frac{y^n}{n!} \frac{z^p}{p!}, \\ |x| < 1, |y| < 1, |z| < 1.$$

The set of remaining ten triple series F_3 , F_4 , F_6 , F_7 , F_8 , F_{10} , ..., F_{14} apparently fell into oblivion, except that is an isolated appearance of F_8 in Mayr [49] who came across this triple series while evaluating certain infinite integrals. Saran [85] initiated a systematic study of these ten triple Gaussian series of Lauricella's set and his notations F_E , F_F , ..., F_T defined below now prevail in the literature:

$$(1.3.5) \quad F_4 \quad \text{or} \quad F_E [a_1, a_1, a_1, b_1, b_2, b_2; c_1, c_2, c_3; x, y, z]$$

$$= \sum_{m,n,p=0}^{\infty} \frac{(a_1)_{m+n+p} (b_1)_m (b_2)_{n+p}}{(c_1)_m (c_2)_n (c_3)_p} \frac{x^m}{m!} \frac{y^n}{n!} \frac{z^p}{p!},$$

if $|x| < r$, $|y| = s$, $|z| = t$ then the region of convergence is defined as $r + (\sqrt{s} + \sqrt{t})^2 = 1$.

$$(1.3.6) \quad F_{14} \quad \text{or} \quad F_F [a_1, a_1, a_1, b_1, b_2, b_1; c_1, c_2, c_2; x, y, z]$$

$$= \sum_{m,n,p=0}^{\infty} \frac{(a_1)_{m+n+p} (b_1)_{m+p} (b_2)_n}{(c_1)_m (c_2)_{n+p}} \frac{x^m}{m!} \frac{y^n}{n!} \frac{z^p}{p!},$$

$$(1 - s)(s - t) = rs;$$

$$(1.3.7) \quad F_8 \quad \text{or} \quad F_G [a_1, a_1, a_1, b_1, b_2, b_3; c_1, c_2, c_2; x, y, z]$$

$$= \sum_{m,n,p=0}^{\infty} \frac{(a_1)_{m+n+p} (b_1)_m (b_2)_n (b_3)_p}{(c_1)_m (c_2)_{n+p}} \frac{x^m}{m!} \frac{y^n}{n!} \frac{z^p}{p!},$$

$$r + s = 1, \quad r + t = 1;$$

$$(1.3.8) \quad F_3 \quad \text{or} \quad F_K \left[a_1, a_2, a_2, b_1, b_2, b_1; c_1, c_2, c_3; x, y, z \right]$$

$$= \sum_{m,n,p=0}^{\infty} \frac{(a_1)_m (a_2)_{n+p} (b_1)_{m+p} (b_2)_n}{(c_1)_m (c_2)_n (c_3)_p} \frac{x^m}{m!} \frac{y^n}{n!} \frac{z^p}{p!},$$

$$(1-r)(1-s) = t;$$

$$(1.3.9) \quad F_{11} \quad \text{or} \quad F_M \left[a_1, a_2, a_2, b_1, b_2, b_1; c_1, c_2, c_2; x, y, z \right]$$

$$= \sum_{m,n,p=0}^{\infty} \frac{(a_1)_m (a_2)_{n+p} (b_1)_{m+p} (b_2)_n}{(c_1)_m (c_2)_{n+p}} \frac{x^m}{m!} \frac{y^n}{n!} \frac{z^p}{p!},$$

$$r + t = 1 = s;$$

$$(1.3.10) \quad F_6 \quad \text{or} \quad F_N \left[a_1, a_2, a_3, b_1, b_2, b_1; c_1, c_2, c_2; x, y, z \right]$$

$$= \sum_{m,n,p=0}^{\infty} \frac{(a_1)_m (a_2)_n (a_3)_p (b_1)_{m+p} (b_2)_n}{(c_1)_m (c_2)_{n+p}} \frac{x^m}{m!} \frac{y^n}{n!} \frac{z^p}{p!},$$

$$(1-r)s + (1-s)t = 0,$$

$$(1.3.11) \quad F_{12} \quad \text{or} \quad F_P \left[a_1, a_2, a_1, b_1, b_1, b_2; c_1, c_2, c_2; x, y, z \right]$$

$$= \sum_{m,n,p=0}^{\infty} \frac{(a_1)_{m+n} (a_2)_n (b_1)_{m+n} (b_2)_p}{(c_1)_m (c_2)_{n+p}} \frac{x^m}{m!} \frac{y^n}{n!} \frac{z^p}{p!},$$

$$(st - s - t)^2 = 4rst;$$

$$(1.3.12) \quad F_{10} \quad \text{or} \quad F_R \left[a_1, a_2, a_1, b_1, b_2, b_1; c_1, c_2, c_2; x, y, z \right]$$

$$= \sum_{m,n,p=0}^{\infty} \frac{(a_1)_{m+p} (a_2)_n (b_1)_{m+p} (b_2)_n}{(c_1)_m (c_2)_{n+p}} \frac{x^m}{m!} \frac{y^n}{n!} \frac{z^p}{p!},$$

$$s(1 - \sqrt{r})^2 + t(1 - s) = 0,$$

$$(1.3.13) \quad F_7 \text{ or } F_S \left[a_1, a_2, a_2, b_1, b_2, b_3; c_1, c_1, c_1; x, y, z \right]$$

$$= \sum_{m,n,p=0}^{\infty} \frac{(a_1)_m (a_2)_{n+p} (b_1)_m (b_2)_n (b_3)_p}{(c_1)_{m+n+p}} \frac{x^m}{m!} \frac{y^n}{n!} \frac{z^p}{p!},$$

$$r + s = rs, \quad s = t,$$

$$(1.3.14) \quad F_{13} \text{ or } F_T \left[a_1, a_2, a_2, b_1, b_2, b_1; c_1, c_1, c_1; x, y, z \right]$$

$$= \sum_{m,n,p=0}^{\infty} \frac{(a_1)_m (a_2)_{n+p} (b_1)_{m+p} (b_2)_n}{(c_1)_{m+n+p}} \frac{x^m}{m!} \frac{y^n}{n!} \frac{z^p}{p!},$$

$$r + s = rs + t.$$

Srivastava's Triple Series H_A, H_B, H_C . During the

further investigation of Lauricella's fourteen hypergeometric series in three variables, Srivastava ($[90]$, $[92]$) introduced three new complete hypergeometric series in three variables viz. H_A , H_B and H_C . Here H_C is generalization of Appell's series F_1 , H_B is generalization of Appell's series F_2 while H_A is generalization of both F_1 and F_2 . While transforming Pochhammer's double-loop contour integrals associated with the series F_C and F_F , the following two interesting triple hypergeometric series, viz. G_A and G_B of Horn's type were also introduced by Pandey $[78]$, where G_A is generalization of Appell's series F_1 and Horn's series G_1 and G_2 ; and G_B is generalization of the Appell series F_1 and the Horn series G_2 .

Motivated by above work further in an investigation of the system of partial differential equations associated with the

triple hypergeometric series H_C , Srivastava [93] introduced a new triple hypergeometric series G_C , which evidently gives the generalization of Appell's series F_1 and Horn's series G_2 and H_1 . Other triple hypergeometric series are introduced in the literature by Dhawan [17], Samar [84] and Exton ([26], [28]).

An unification of Lauricella's fourteen hypergeometric series F_1, F_2, \dots, F_{14} and the additional series $H_A, H_B : H_C$ was introduced by Srivastava [91],

1.4 Quadruple Hypergeometric Series. Until Exton [24] defined and examined a few of their properties, no specific study was made of any hypergeometric functions of four variables apart from the four Lauricella's functions $F_A^{(4)}, F_B^{(4)}, F_C^{(4)}$ and $F_D^{(4)}$ and certain of their limiting cases. On account of the large number of such functions which arises from a systematic study of all the possibilities, he restricted himself to those functions which are complete and of the second order and which involve at least one product of the type $(a, k+m+n+p)$ in series representation; k, m, n, p are indices of quadruple summation. Exton [24] defined 21 quadruple hypergeometric series in the following way:

$$(1.4.1) \quad K_1 [a, a, a, a, b, b, b, c; d, e_1, e_2, d; x, y, z, u] \\ = \sum \frac{(a, k+m+n+p) (b, k+m+n) (c, p)}{(d, k+p) (e_1, m) (e_2, n)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.2) \quad K_2 [a, a, a, a; b, b, b, c; d_1, d_2, d_3, d_4; x, y, z, u]$$

$$= \sum \frac{(a, k+m+n+p) (b, k+m+n) (c, p)}{(d_1, k) (d_2, m) (d_3, n) (d_4, p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.3) \quad K_3 \left[a, a, a, a; b_1, b_1, b_2, b_2; c_1, c_2, c_2, c_1; x, y, z, u \right] \\ = \sum \frac{(a, k+m+n+p) (b_1, k+m) (b_2, n+p)}{(c_1, k+p) (c_2, m+n)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.4) \quad K_4 \left[a, a, a, a; b_1, b_1, b_2, b_2; c, d_1, d_2, c; x, y, z, u \right] \\ = \sum \frac{(a, k+m+n+p) (b_1, k+m) (b_2, n+p)}{(c, k+p) (d_1, m) (d_2, n)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.5) \quad K_5 \left[a, a, a, a; b_1, b_1, b_2, b_2; c_1, c_2, c_3, c_4; x, y, z, u \right] \\ = \sum \frac{(a, k+m+n+p) (b_1, p+m) (b_2, n+p)}{(c_1, k) (c_2, m) (c_3, n) (c_4, p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.6) \quad K_6 \left[a, a, a, a; b, b, c_1, c_2; e, d, d, d; x, y, z, u \right] \\ = \sum \frac{(a, k+m+n+p) (b, k+m) (c_1, n) (c_2, p)}{(e, k) (d, m+n+p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.7) \quad K_7 \left[a, a, a, a, b, b, c_1, c_2; d_1, d_2, d_1, d_2; x, y, z, u \right] \\ = \sum \frac{(a, k+m+n+p) (b, k+m) (c_1, n) (c_2, p)}{(d_1, k+n) (d_2, m+p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.8) \quad K_8 \left[a, a, a, a; b, b, c_1, c_2; d, e_1, d, e_2; x, y, z, u \right] \\ = \sum \frac{(a, k+m+n+p) (b, k+m) (c_1, n) (c_2, p)}{(d, k+n) (e_1, m) (e_2, p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$= \sum \frac{(a, k+m+n+p) (b, k+m+n) (c, p)}{(d_1, k) (d_2, m) (d_3, n) (d_4, p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.3) \quad K_3 \left[a, a, a, a; b_1, b_1, b_2, b_2; c_1, c_2, c_2, c_1; x, y, z, u \right] \\ = \sum \frac{(a, k+m+n+p) (b_1, k+m) (b_2, n+p)}{(c_1, k+p) (c_2, m+n)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.4) \quad K_4 \left[a, a, a, a; b_1, b_1, b_2, b_2; c, d_1, d_2, c; x, y, z, u \right] \\ = \sum \frac{(a, k+m+n+p) (b_1, k+m) (b_2, n+p)}{(c, k+p) (d_1, m) (d_2, n)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.5) \quad K_5 \left[a, a, a, a; b_1, b_1, b_2, b_2; c_1, c_2, c_3, c_4; x, y, z, u \right] \\ = \sum \frac{(a, k+m+n+p) (b_1, p+m) (b_2, n+p)}{(c_1, k) (c_2, m) (c_3, n) (c_4, p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.6) \quad K_6 \left[a, a, a, a; b, b, c_1, c_2; e, d, d, d; x, y, z, u \right] \\ = \sum \frac{(a, k+m+n+p) (b, k+m) (c_1, n) (c_2, p)}{(e, k) (d, m+n+p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.7) \quad K_7 \left[a, a, a, a, b, b, c_1, c_2; d_1, d_2, d_1, d_2; x, y, z, u \right] \\ = \sum \frac{(a, k+m+n+p) (b, k+m) (c_1, n) (c_2, p)}{(d_1, k+n) (d_2, m+p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.9) \quad K_9 \left[a, a, a, a, b, b, c_1, c_2; e_1, e_2, d, d; x, y, z, u \right]$$

$$= \sum \frac{(a, k+m+n+p) (b, k+m) (c_1, n) (c_2, p)}{(e_1, k) (e_2, m) (d, n+p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.10) \quad K_{10} \left[a, a, a, a; b, b, c_1, c_2; d_1, d_2, d_3, d_4; x, y, z, u \right]$$

$$= \sum \frac{(a, k+m+n+p) (b, k+m) (c_1, n) (c_2, p)}{(d_1, k) (d_2, m) (d_3, n) (d_4, p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.11) \quad K_{11} \left[a, a, a, a; b_1, b_2, b_3, b_4; c, c, c, d; x, y, z, u \right]$$

$$= \sum \frac{(a, k+m+n+p) (b_1, k) (b_2, m) (b_3, n) (b_4, p)}{(c, k+m+n) (d, p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.12) \quad K_{12} \left[a, a, a, a; b_1, b_2, b_3, b_4; c_1, c_1, c_2, c_2; x, y, z, u \right]$$

$$= \sum \frac{(a, k+m+n+p) (b_1, k) (b_2, m) (b_3, n) (b_4, p)}{(c_1, k+m) (c_2, n+p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.13) \quad K_{13} \left[a, a, a, a; b_1, b_2, b_3, b_4; c, c, d_1, d_2; x, y, z, u \right]$$

$$= \sum \frac{(a, k+m+n+p) (b_1, k) (b_2, m) (b_3, n) (b_4, p)}{(c, k+m) (d_1, n) (d_2, p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.14) \quad K_{14} \left[a, a, a, c_3; b, c_1, c_2, b; d, d, d, d; x, y, z, u \right]$$

$$= \sum \frac{(a, k+m+n) (c_3, p) (b, k+p) (c_1, m) (c_2, n)}{(d, k+m+n+p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.15) \quad K_{15} \left[a, a, a, b_5; b_1, b_2, b_3, b_4; c, c, c, c; x, y, z, u \right]$$

$$= \sum \frac{(a, k+m+n) (b_5, p) (b_1, k) (b_2, m) (b_3, n) (b_4, p)}{(c, k+m+n+p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.16) \quad K_{16} \left[a_1, a_2, a_3, a_4; b; x, y, z, u \right]$$

$$= \sum \frac{(a_1, k+m) (a_2, k+n) (a_3, m+p) (a_4, n+p)}{(b, k+m+n+p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.17) \quad K_{17} \left[a_1, a_2, a_3, b_1, b_2; c; x, y, z, u \right]$$

$$= \sum \frac{(a_1, k+m) (a_2, k+n) (a_3, m+n) (b_1, p) (b_2, p)}{(c, k+m+n+p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.18) \quad K_{18} \left[a_1, a_2, a_3, b_1, b_2; c; x, y, z, u \right]$$

$$= \sum \frac{(a_1, k+m) (a_2, k+p) (a_3, m+n) (b_1, n) (b_2, p)}{(c, k+m+n+p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.19) \quad K_{19} \left[a_1, a_2, b_1, b_2, b_3, b_4; c; x, y, z, u \right]$$

$$= \sum \frac{(a_1, k+m) (a_2, k+n) (b_1, m) (b_2, n) (b_3, p) (b_4, p)}{(c, k+m+n+p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.20) \quad K_{20} \left[a_1, a_1, b_3, b_4; b_1, b_2, a_2, a_2; c, c, c, c; x, y, z, u \right]$$

$$= \sum \frac{(a_1, k+m) (b_3, n) (b_4, p) (b_1, k) (b_2, m) (a_2, n+p)}{(c, k+m+n+p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!},$$

$$(1.4.21) \quad K_{21} \left[a, a, b_6, b_5; b_1, b_2, b_3, b_4; c, c, c, c; x, y, z, u \right]$$

$$= \sum \frac{(a, k+m) (b_6, n) (b_5, p) (b_1, k) (b_2, m) (b_3, n) (b_4, p)}{(c, k+m+n+p)} \frac{x^k}{k!} \frac{y^m}{m!} \frac{z^n}{n!} \frac{u^p}{p!}.$$

Recently, Sharma and Parihar [89] further introduced 83 hypergeometric functions of four variables $F_1^{(4)}, \dots, F_{83}^{(4)}$. It is worthy to note that out of these eighty three functions following ^enineteen functions had already been introduced by Exton ([24], [27]) in different notations (see also Chandel and Kumar [12]) :

$$F_9^{(4)} = K_1, \quad F_1^{(4)} = K_2, \quad F_{38}^{(4)} = K_3, \quad F_{10}^{(4)} = K_4,$$

$$F_2^{(4)} = K_5, \quad F_{59}^{(4)} = K_6, \quad F_{39}^{(4)} = K_7, \quad F_{11}^{(4)} = K_8,$$

$$F_{12}^{(4)} = K_9, \quad F_3^{(4)} = K_{10}, \quad F_{60}^{(4)} = K_{11}, \quad F_{40}^{(4)} = K_{12},$$

$$F_{13}^{(4)} = K_{13}, \quad F_{77}^{(4)} = K_{14}, \quad F_{78}^{(4)} = K_{15}, \quad F_{79}^{(4)} = K_{16},$$

$$F_{82}^{(4)} = K_{19}, \quad F_{81}^{(4)} = K_{20}, \quad F_{83}^{(4)} = K_{21}.$$

Very recently, Chandel, Agrawal and Kumar [13] have also introduced seven more possible hypergeometric functions of four variables $F_{A_1}^{(4)}, F_{A_2}^{(4)}, F_{A_3}^{(4)}, F_{B_1}^{(4)}, F_{B_2}^{(4)}, F_{C_1}^{(4)}, F_{C_2}^{(4)}$.

1.5 Multiple Hypergeometric Functions of Several Variables

Several authors like Green [30], Hermite [31] and Didon [18] have discussed certain specialized hypergeometric

functions. Lauricella [43] approached this topic systematically, and starting with the Appell functions, he proceeded to define and study the following four important functions which bear his name :

$$\begin{aligned}
 (1.5.1) \quad F_A^{(n)} [a, b_1, \dots, b_n; c_1, \dots, c_n; x_1, \dots, x_n] \\
 = \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a, m_1 + \dots + m_n) (b_1, m_1) \dots (b_n, m_n)}{(c_1, m_1) \dots (c_n, m_n)} \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!}, \\
 |x_1| + \dots + |x_n| < 1.
 \end{aligned}$$

$$\begin{aligned}
 (1.5.2) \quad F_B^{(n)} [a_1, \dots, a_n, b_1, \dots, b_n; c; x_1, \dots, x_n] \\
 = \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a_1, m_1) \dots (a_n, m_n) (b_1, m_1) \dots (b_n, m_n)}{(c, m_1 + \dots + m_n)} \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!}, \\
 |x_1| < 1, \dots, |x_n| < 1.
 \end{aligned}$$

$$\begin{aligned}
 (1.5.3) \quad F_C^{(n)} [a, b; c_1, \dots, c_n; x_1, \dots, x_n] \\
 = \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a, m_1 + \dots + m_n) (b, m_1 + \dots + m_n)}{(c_1, m_1) \dots (c_n, m_n)} \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!}, \\
 |x_1|^{\frac{1}{2}} + \dots + |x_n|^{\frac{1}{2}} < 1.
 \end{aligned}$$

$$\begin{aligned}
 (1.5.4) \quad F_D^{(n)} [a, b_1, \dots, b_n; c; x_1, \dots, x_n] \\
 = \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a, m_1 + \dots + m_n) (b_1, m_1) \dots (b_n, m_n)}{(c, m_1 + \dots + m_n)} \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!},
 \end{aligned}$$

It is clear that

$$F_A^{(2)} = F_2, \quad F_B^{(2)} = F_3, \quad F_C^{(2)} = F_4, \quad F_D^{(2)} = F_1,$$

where F_1, F_2, F_3, F_4 are the Appell series [1, p. 296].

The confluent forms of the Lauricella's functions are defined as

$$(1.5.5) \quad \Psi_2^{(n)} [a; c_1, \dots, c_n; x_1, \dots, x_n] \\ = \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a, m_1 + \dots + m_n)}{(c_1, m_1) \dots (c_n, m_n)} \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!},$$

(cf. Erdélyi [21, p. 446, eq. (7.2)]);

$$(1.5.6) \quad \Phi_2^{(n)} [b_1, \dots, b_n; c; x_1, \dots, x_n] \\ = \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(b_1, m_1) \dots (b_n, m_n)}{(c, m_1 + \dots + m_n)} \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!},$$

(cf. Humbert [34, p. 429]; also see Appell and Kampé de Fériet [2, p. 134, eq. (34)]).

It is clear that $\Phi_2^{(2)} = \Phi_2$, $\Psi_2^{(2)} = \Psi_2$,

where Φ_2 and Ψ_2 are confluent hypergeometric series of two variables Erdélyi et al. [19, pp. 225 - 228].

Further, Srivastava and Extón [96, p. 373, eq. (12)] introduced confluent series $\Phi_D^{(n)}$.

while Exton [27, p. 43, eq. (2.1.1.4) and (2.1.1.5)] also introduced the confluent series $\Xi_1^{(n)}$ and $\Phi_3^{(n)}$ which are generalizations of Ξ_1 and Φ_3 in two variables.

Generalization of Lauricella Series. An interesting generalization of Lauricella's multiple hypergeometric series $F_A^{(n)}$ and $F_B^{(n)}$ and Horn's double hypergeometric series H_2 was given by Erdelyi [21, p. 13, eq. (28)].

Srivastava and Daoust ([95, p. 494]) Also see Srivastava and Manocha [102, p. 64, (18), (19), (20)] introduced a most generalized multiple hypergeometric series which is defined as

$$\begin{aligned}
 (1.5.7) \quad & S_{\substack{A:B'; \dots; B^{(n)} \\ C:D'; \dots; D^{(n)}}} \left[\begin{matrix} x_1 \\ \vdots \\ x_n \end{matrix} \right] \\
 = & S_{\substack{A:B'; \dots; B^{(n)} \\ C:D'; \dots; D^{(n)}}} \left[\begin{matrix} \Gamma(a): \theta', \dots, \theta^{(n)} : \Gamma(b'): \phi', \dots, \phi^{(n)} : \Gamma(b^{(n)}): \phi^{(n)}; \\ \Gamma(c): \psi', \dots, \psi^{(n)} : \Gamma(d'): \delta', \dots, \delta^{(n)} : \Gamma(d^{(n)}): \delta^{(n)}; \\ x_1, \dots, x_n \end{matrix} \right] \\
 = & \sum_{m_1, \dots, m_n=0}^{\infty} \frac{\prod_{j=1}^A \Gamma(a_j + \sum_{i=1}^n m_i \theta_j^{(i)}) \prod_{j=1}^{B'} \Gamma(b'_j + m_1 \phi'_j) \dots \prod_{j=1}^{B^{(n)}} \Gamma(b_j^{(n)} + m_n \phi_j^{(n)})}{\prod_{j=1}^C \Gamma(c_j + \sum_{i=1}^n m_i \psi_j^{(i)}) \prod_{j=1}^{D'} \Gamma(d'_j + m_1 \delta'_j) \dots \prod_{j=1}^{D^{(n)}} \Gamma(d_j^{(n)} + m_n \delta_j^{(n)})} \\
 & \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!},
 \end{aligned}$$

or alternatively by

$$\begin{aligned}
 (1.5.8) \quad F^{A:B'; \dots; B^{(n)}; C:D'; \dots; D^{(n)}} & \left[\begin{array}{l} \bigwedge(a): \theta', \dots, \theta^{(n)} \bigwedge(b'): \phi' \bigwedge \dots \bigwedge(b^{(n)}): \phi^{(n)} \bigwedge; \\ \bigwedge(c): \psi', \dots, \psi^{(n)} \bigwedge(d'): \delta' \bigwedge \dots \bigwedge(d^{(n)}): \delta^{(n)} \bigwedge; \\ x_1, \dots, x_n \end{array} \right] \\
 = \sum_{m_1, \dots, m_n=0}^{\infty} & \frac{\prod_{j=1}^A (a_j, m_1 \theta'_j + \dots + m_n \theta_j^{(n)}) \prod_{j=1}^{B'} (b_j, m_1 \phi'_j) \dots \prod_{j=1}^{B^{(n)}} (b_j^{(n)}, m_n \phi_j^{(n)})}{\prod_{j=1}^C (c_j, m_1 \psi'_j + \dots + m_n \psi_j^{(n)}) \prod_{j=1}^{D'} (d_j, m_1 \delta'_j) \dots \prod_{j=1}^{D^{(n)}} (d_j^{(n)}, m_n \delta_j^{(n)})} \\
 & \frac{x_1^{m_1}}{m_1!}, \dots, \frac{x_n^{m_n}}{m_n!},
 \end{aligned}$$

where

$$\begin{aligned}
 (1.5.9) \quad \theta_j^{(i)}, \quad j=1, \dots, A; \quad \phi_j^{(i)}, \quad j=1, \dots, B^{(i)}; \quad \psi_j^{(i)}, \quad j=1, \dots, C; \\
 \delta_j^{(i)}, \quad j=1, \dots, D^{(i)}; \quad 1 \leq i \leq n;
 \end{aligned}$$

and real and positive and (a) is taken to abbreviate the sequence of A parameters a_1, \dots, a_A ; $(b^{(i)})$ abbreviates the sequence of $B^{(i)}$ parameters $b_1^{(i)}, \dots, b_{B^{(i)}}^{(i)}$, $i=1, \dots, n$; with similar interpretations for (c) and $(d^{(i)})$, $i=1, \dots, n$; etc. For $n=2$ the above series reduces to the series in two variables defined by Srivastava and Daoust [94] For more study one may refer to Srivastava and Karlsson [101].

Other Generalizations of Lauricella's Series. . . Exton([25], also see [27]) introduced following multiple hypergeometric series related to Lauricella's $F_D^{(n)}$:

$$(1.5.10) \quad \begin{matrix} (k) \\ (1) \end{matrix} E_D^{(n)} [a, b_1, \dots, b_n; c, c'; x_1, \dots, x_n] \\ = \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a, m_1 + \dots + m_n) (b_1, m_1) \dots (b_n, m_n)}{(c, m_1 + \dots + m_k) (c', m_{k+1} + \dots + m_n)} \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!},$$

$$(1.5.11) \quad \begin{matrix} (k) \\ (2) \end{matrix} E_D^{(n)} [a, a', b_1, \dots, b_n; c; x_1, \dots, x_n] \\ = \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a, m_1 + \dots + m_k) (a', m_{k+1} + \dots + m_n) (b_1, m_1) \dots (b_n, m_n)}{(c, m_1 + \dots + m_n)} \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!}$$

Motivated by Exton's work Chandel [8] introduced following multiple hypergeometric function closely related to Lauricella's $F_C^{(n)}$:

$$(1.5.12) \quad \begin{matrix} (k) \\ (1) \end{matrix} E_C^{(n)} [a, a', b; c_1, \dots, c_n; x_1, \dots, x_n] \\ = \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a, m_1 + \dots + m_k) (a', m_{k+1} + \dots + m_n)}{(c_1, m_1) \dots (c_n, m_n)} \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!}$$

Exton [26], p. 193, eq. (1.5)] also introduced the multiple hypergeometric series ${}_n D^{(p,q)}$ related to Lauricella's $F_D^{(n)}$.

For $q = p$, it reduces to Exton [23], p. 86] (Also see Exton

[27, p. 104, eq. (3.6.1)] , which is multivariable generalization of the Horn series G_2 .

Exton [27] also considered three other generalizations of the Horn series denoted by $(p)H_j^{(n)}$, $j = 2, 3, 4$. His series $(p)H_2^{(n)}$ is simply Erdélyi's series $H_{n,p}$ [21, p. 13, eq. (28)] while for other two remaining generalizations one may refer to Exton [27, p. 97, (3.5.1), (3.5.2)] .

Intermediate Lauricella's Functions. By making an appeal to a commendable idea of interpolation between Lauricella's functions Chandel and Gupta [9] introduced the following three multiple hypergeometric functions related to Lauricella's functions :

$$(1.5.13) \quad (k)F_{AC}^{(n)} [a, b, b_{k+1}, \dots, b_n; c_1, \dots, c_n; x_1, \dots, x_n] \\ = \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a, m_1 + \dots + m_n) (b, m_1 + \dots + m_k) (b_{k+1}, m_{k+1}) \dots (b_n, m_n)}{(c_1, m_1) \dots (c_n, m_n)} \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!},$$

$$(1.5.14) \quad (k)F_{AD}^{(n)} [a, b_1, \dots, b_n; c; c_{k+1}, \dots, c_n; x_1, \dots, x_n] \\ = \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a, m_1 + \dots + m_n) (b_1, m_1) \dots (b_n, m_n)}{(c, m_1 + \dots + m_k) (c_{k+1}, m_{k+1}) \dots (c_n, m_n)} \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!}$$

$$(1.5.15) \quad (k)F_{BD}^{(n)} [a, a_{k+1}, \dots, a_n, b_1, \dots, b_n; c; x_1, \dots, x_n]$$

$$= \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a, m_1 + \dots + m_k) (a_{k+1}, m_{k+1}) \dots (a_n, m_n) (b_1, m_1) \dots (b_n, m_n)}{(c, m_1 + \dots + m_n)} \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!}.$$

It is clear that

$$(1.5.16) \quad {}^{(0)}F_{AC}^{(n)} = F_A^{(n)}, \quad {}^{(1)}F_{AC}^{(n)} = F_A^{(n)}, \quad {}^{(n)}F_{AC}^{(n)} = F_C^{(n)}$$

$$(1.5.17) \quad {}^{(0)}F_{AD}^{(n)} = F_A^{(n)}, \quad {}^{(1)}F_{AD}^{(n)} = F_A^{(n)}, \quad {}^{(n)}F_{AD}^{(n)} = F_D^{(n)}$$

$$(1.5.18) \quad {}^{(0)}F_{BD}^{(n)} = F_B^{(n)}, \quad {}^{(1)}F_{BD}^{(n)} = F_B^{(n)}, \quad {}^{(n)}F_{BD}^{(n)} = F_D^{(n)}$$

Chandel and Gupta [9] also introduced the following confluent forms of the above series

$$(1.5.19) \quad \begin{matrix} (k) \\ (1) \end{matrix} \Phi_{AC}^{(n)} [a, b; c_1, \dots, c_n; x_1, \dots, x_n] \\ = \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a, m_1 + \dots + m_n) (b, m_1 + \dots + m_k)}{(c_1, m_1) \dots (c_n, m_n)} \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!}, \quad k \neq n.$$

$$(1.5.20) \quad \begin{matrix} (k) \\ (2) \end{matrix} \Phi_{AC}^{(n)} [a, b_{k+1}, \dots, b_n; c_1, \dots, c_n; x_1, \dots, x_n] \\ = \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a, m_1 + \dots + m_n) (b_{k+1}, m_{k+1}) \dots (b_n, m_n)}{(c_1, m_1) \dots (c_n, m_n)} \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!}, \quad k \neq 0.$$

$$(1.5.21) \quad \begin{matrix} (k) \\ (1) \end{matrix} \Phi_{AD}^{(n)} [a, b_1, \dots, b_n; c; x_1, \dots, x_n]$$

$$= \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a, m_1 + \dots + m_n) (b_1, m_1) \dots (b_n, m_n)}{(c, m_1 + \dots + m_k)} \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!}, \quad k \neq n.$$

$$(1.5.22) \quad {}^{(k)}\phi_{BD}^{(n)} \left[a, b_1, \dots, b_n; c; x_1, \dots, x_n \right]$$

$$= \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a, m_1 + \dots + m_k) (b_1, m_1) \dots (b_n, m_n)}{(c, m_1 + \dots + m_n)} \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!}, \quad k \neq n.$$

$$(1.5.23) \quad {}^{(k)}\phi_{BD}^{(n)} \left[a_{k+1}, \dots, a_n, b_1, \dots, b_n; c; x_1, \dots, x_n \right]$$

$$= \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a_{k+1}, m_{k+1}) \dots (a_n, m_n) (b_1, m_1) \dots (b_n, m_n)}{(c, m_1 + \dots + m_n)} \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!},$$

$$k \neq 0.$$

Motivated by this work, Karlsson [36] also introduced fourth possible intermediate Lauricella's function defined by

$$(1.5.24) \quad {}^{(k)}F_{CD}^{(n)} \left[a, b, b_1, \dots, b_k; c, c_{k+1}, \dots, c_n; x_1, \dots, x_n \right]$$

$$= \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a, m_1 + \dots + m_n) (b, m_{k+1} + \dots + m_n) (b_1, m_1) \dots (b_k, m_k)}{(c, m_1 + \dots + m_k) (c_{k+1}, m_{k+1}) \dots (c_n, m_n)} \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!},$$

It is clear that

$${}^{(0)}F_{CD}^{(n)} = F_C^{(n)} \quad \text{and} \quad {}^{(n)}F_{CD}^{(n)} = F_D^{(n)}.$$

For a natural further generalization of the (Srivastava-Daoust) generalized Lauricella functions of several complex variables

defined by (1.5.11) or (1.5.12), one may refer to Srivastava and Panda ([97], p. 271, eq. (4.1), [98], p. 121, eq. (1.10))

In the present thesis, we introduce and study several confluent hypergeometric functions of multiple hypergeometric functions of several variables (see also Chandel and Vishwakarma [10] and [11]) .

1.6 Applications of Fractional Calculus. The theory and applications of fractional calculus are based largely upon the familiar differential operator ${}_x D_x^\mu$ defined by (cf. e.g., Oldham and Spanier [77], p. 49, Lavoie et al. [44] and Ross [83]; see also Srivastava and Owa [103], p. 356)

$$(1.6.1) \quad {}_x D_x^\mu \{ f(x) \} = \frac{1}{\Gamma(-\mu)} \int_x^x (x-t)^{\mu-1} f(t) dt \quad (\operatorname{Re}(\mu) < 0),$$

$$\frac{d^m}{dx^m} {}_x D_x^{\mu-m} \{ f(x) \} \quad 0 \leq \operatorname{Re}(\mu) < m ;$$

$m \in \mathbb{N}_0$

where $\mathbb{N}_0 = \mathbb{N} \cup \{0\}$ ($\mathbb{N} = \{1, 2, \dots\}$) .

For $\alpha = 0$, (1.6.1) defines the classical Riemann-Liouville fractional derivative (or integral) of order μ (or $-\mu$) . On the other hand, when $\alpha \rightarrow w$, (1.6.1) may be identified with the definition of the familiar Weyl fractional derivative (or integral of order μ (or $-\mu$)) (see, for details, Erdélyi et al. [20], chapter 13 and Samko et al. [87]) , For the sake of simplicity, the special case of fractional calculus operator ${}_x D_x^\mu$ for $\alpha = 0$, will be written

as D_x^μ , i.e. $D_x^\mu \equiv 0 D_x^\mu$ ($\mu \in \mathbb{C}$) .

The computation of fractional derivatives (and fractional integrals) of special functions of one and more variables is important from the point of view of the usefulness of these results in (for example) the evaluation of series and integrals (cf. ,e.g. , Nishimoto [75] and Srivastava [105] , the derivation of generating functions (Srivastava and Manocha [102 , chapter 5]) and the solution of differential and integral equations (cf. Nishimoto [75], and Srivastava and Buschman [99 , chapter 3] ; see also Mc Bride and Roach [50], Nishimoto [76] , and Srivastava and Saigo [104]) . Motivated by these and avenues of applications, a number of workers have made use of the fractional calculus operator D_x^μ in the theory of special functions of one and more variables (see for example [88], [100], [15] etc.) .

In the present thesis, we obtain several fractional derivative formulas involving multiple hypergeometric functions of several variables discussed in this chapter .

1.7 Applications of Multiple Hypergeometric Functions in Statistics

Different distributions have been discussed by various authors, Block and Rao [4] , Carlson [7] , Daley [15], Datt [16] , Kabe [37], Kaufman, Mathai and Saxena [38], Kendall [39] , Khatri and Pillai ([40] , [41]) , Khatri and Srivastava [41] , Littler and Fackerell [45] , Lukacs and Naha [46] , Lukacs [47] , Mathai ([51] to [61]) , Mathai and Rathie ([62] to [66]) , Mathai and Saxena ([67] to [73]) , Miller [74] , Pillai, Al - Ani and Jouris [79] , Pillai and Jouris [80] , Pillai and Nagarsenker [81]

The chapter 11 deals with the fractional derivatives involving hypergeometric functions of four variables

Robbins and Pitman [82] , Strawderman [107] , Thaung [108] , and Wilks [109] .

Srivastava and Singhal [106] studied , many of the classical statistical distributions , which were associated with the beta and gamma distributions . Further Exton [27] discussed generalized beta and gamma distributions with other special multivariate distributions. He also discussed the expectations of some functions involving Lauricella's multiple hypergeometric functions [43] .

In the last part of the thesis , we extend the above work and obtain some probability density functions associated with the multivariate beta and gamma distributions and make their applications to obtain some expectations involving the most generalized multiple hypergeometric function of Srivastava and Daoust [94] defined by (1.5.7) or (1.5.8) (also see Srivastava and Manocha [102] , p. 64) .

Finally, we also derive the moments for these multivariate beta and gamma distributions and discuss their special cases to obtain the results involving other multiple hypergeometric functions of several variables .

1.9. Brief Survey of the Chapters

In the chapter II , we establish relations between hypergeometric functions of three and four variables .

The chapter III deals with the fractional derivatives involving hypergeometric functions of four variables .

In the chapter IV , we derive generating relations for generalized multiple hypergeometric functions of Srivastava and Daoust [95] and discuss their special cases to obtain new generating relations for other multiple hypergeometric functions

In the chapter V , we study Karlsson's multiple hypergeometric function [36] and introduce eleven confluent forms of multiple hypergeometric functions with their applications in obtaining their recurrence relations .

Chapter VI deals with the use of theory of fractional integration to derive Eulerian integral representations for Karlsson's multiple hypergeometric function [36] and for various confluent forms of multiple hypergeometric functions introduced in the chapter V .

In the chapter VII , we evaluate fractional derivatives involving multiple hypergeometric functions of several variables .

In the chapter VIII and IX on Applications of Multiple hypergeometric functions in Statistics , we establish various probability density functions associated with the multivariate beta and gamma distributions and make their applications to obtain various expectations involving the multiple hypergeometric functions of several variables. We also derive moments for these multivariate beta and gamma distributions and discuss their special cases .

**SOME RELATIONS
BETWEEN
HYPERGEOMETRIC
FUNCTIONS OF
THREE AND
FOUR
VARIABLES**

SOME RELATIONS BETWEEN HYPERGEOMETRIC
FUNCTIONS OF THREE AND FOUR VARIABLES

2.1 INTRODUCTION : Lauricella [4, p. 114] introduced fourteen complete hypergeometric series in three variables of the second order. He denoted his triple hypergeometric series by the symbols F_1, F_2, \dots, F_{14} of which F_1, F_2, F_5 and F_9 correspond respectively to the three variables Lauricella series $F_A^{(3)}, F_B^{(3)}, F_C^{(3)}$ and $F_D^{(3)}$ respectively.

After a gap of long time, Saran [5] initiated a systemic study of remaining ten series with the notations $F_E, F_F, F_G, F_K, F_M, F_N, F_P, F_R, F_S$ and F_T for $F_4, F_{14}, F_8, F_3, F_{11}, F_6, F_{12}, F_{10}, F_7$, and F_{13} respectively.

Exton [1,2,3] introduced 21 complete hypergeometric series K_1, K_2, \dots, K_{21} of four variables, Sharma and Parihar [6] introduced 83 complete hypergeometric series F_1, F_2, \dots, F_{83} of four variables. It is remarkable that out of these 83 series, the following 19 series had already been appeared in the literature due to Exton [1,2,3] in the different notations;

$$F_9^{(4)} = K_1, F_1^{(4)} = K_2, F_{38}^{(4)} = K_3, F_{10}^{(4)} = K_4, F_2^{(4)} = K_5$$

$$F_{59}^{(4)} = K_6, F_{39}^{(4)} = K_7, F_{11}^{(4)} = K_8, F_{12}^{(4)} = K_9,$$

$$F_3^{(4)} = K_{10}, \quad F_{60}^{(4)} = K_{11}, \quad F_{40}^{(4)} = K_{12}, \quad F_{13}^{(4)} = K_{13},$$

$$F_{77}^{(4)} = K_{14}, \quad F_{78}^{(4)} = K_{15}, \quad F_{79}^{(4)} = K_{16}, \quad F_{82}^{(4)} = K_{19},$$

$$F_{81}^{(4)} = K_{20}, \quad F_{83}^{(4)} = K_{21}.$$

In this chapter, we shall establish certain relations involving above hypergeometric functions of three and four variables:

2.2 RELATIONS

Consider

$$\begin{aligned} & (1-u)^{-b_1} F_A^{(3)}(a, b_1, b_2, b_3; c_1, c_2, c_3; \frac{x}{1-u}, y, z) \\ &= \sum_{q=0}^{\infty} \frac{u^q}{q!} (b_1)_q F_A^{(3)}(a, b_1+q, b_2, b_3; c_1, c_2, c_3; x, y, z) \\ &= \sum_{m, n, p, q=0}^{\infty} \frac{(a)_{m+n+p} (b_1)_{m+q} (b_2)_n (b_3)_p (c_4)_q}{(c)_m (c_2)_n (c_3)_p (c_4)_q} \cdot \frac{x^m}{m!} \cdot \frac{y^n}{n!} \cdot \frac{z^p}{p!} \cdot \frac{u^q}{q!} \end{aligned}$$

Therefore

$$\begin{aligned} (2.21) \quad & (1-u)^{-b_1} F_A^{(3)}(a, b_1, b_2, b_3; c_1, c_2, c_3; \frac{x}{1-u}, y, z) \\ &= F_6^{(4)}(a, a, a, c_4, b_1, b_2, b_3, b_1; c_1, c_2, c_3, c_4; x, y, z, u), \end{aligned}$$

where $|u| < 1$, $|\frac{x}{1-u}| + |y| + |z| < 1$.

Applying the same techniques and make slight adjustment in interchanging of variables, we derive the following relationships :

$$(2.2.2) \quad (1-u)^{-a} F_A^{(3)}(a, b_1, b_2, b_3; c_1, c_2, c_3; \frac{x}{1-u}, \frac{y}{1-u}, \frac{z}{1-u})$$

$$= F_A^{(4)}(a, b_1, b_2, b_3, b_4; c_1, c_2, c_3, b_4; x, y, z, u),$$

$$|x| + |y| + |z| + |u| < 1, \quad |u| < 1.$$

$$(2.2.3) \quad (1-u)^{-a_1} F_B^{(3)}(a_1, a_2, a_3, b_1, b_2, b_3; c; \frac{x}{1-u}, y, z)$$

$$= F_{76}^{(4)}(a_1, a_1, a_3, a_2, b_1, b_4, b_3, b_2; c, b_4, c, c; x, u, z, y),$$

$$|u| < 1, \quad \left| \frac{x}{1-u} \right| < 1, \quad |y| < 1, \quad |z| < 1.$$

$$(2.2.4) \quad (1-u)^{-a} F_C^{(3)}(a, b; c_1, c_2, c_3; \frac{x}{1-u}, \frac{y}{1-u}, \frac{z}{1-u})$$

$$= K_2(a, a, a, a; b, b, b, c_4; c_1, c_2, c_3, c_4; x, y, z, u),$$

$$|u| < 1, \quad \left| \frac{x}{1-u} \right|^{\frac{1}{2}} + \left| \frac{y}{1-u} \right|^{\frac{1}{2}} + \left| \frac{z}{1-u} \right|^{\frac{1}{2}} < 1.$$

$$(2.2.5) \quad (1-u)^{-a} F_D^{(3)}(a, b_1, b_2, b_3; c; \frac{x}{1-u}, \frac{y}{1-u}, \frac{z}{1-u})$$

$$= K_{11}(a, a, a, a; b_1, b_2, b_3, b_4; c, c, c, b_4; x, y, z, u),$$

$$|u| < 1, \quad \left| \frac{x}{1-u} \right| < 1, \quad \left| \frac{y}{1-u} \right| < 1, \quad \left| \frac{z}{1-u} \right| < 1.$$

$$(2.2.6) \quad (1-u)^{-b_1} F_D^{(3)}(a, b_1, b_2, b_3; c; \frac{x}{1-u}, y, z)$$

$$= F_{64}^{(4)}(a, a, a, c', b_1, b_2, b_3, b_1; c, c, c, c'; x, y, z, u),$$

$$|u| < 1, \quad \left| \frac{x}{1-u} \right| < 1, \quad |y| < 1, \quad |z| < 1.$$

$$(2.2.7) \quad (1-u)^{-a_1} F_E (a_1, a_1, a_1, b_1, b_2, b_2; c_1, c_2, c_3; \frac{x}{1-u}, \frac{y}{1-u}, \frac{z}{1-u})$$

$$= K_{10} (a_1, a_1, a_1, a_1; b_2, b_2, b_1, c_4; c_3, c_2, c_1, c_4; z, y, x, u) ,$$

$$|u| < 1 , \quad \text{if} \quad \left| \frac{x}{1-u} \right| < r , \quad \left| \frac{y}{1-u} \right| < s , \quad \left| \frac{z}{1-u} \right| < t$$

$$\text{then} \quad r + (\sqrt{s} + \sqrt{t})^2 = 1 .$$

$$(2.2.8) \quad (1-u)^{-b_2} F_E (a_1, a_1, a_1, b_1, b_2, b_2; c_1, c_2, c_3; x, \frac{y}{1-u}, \frac{z}{1-u})$$

$$= F_4^{(4)} (a_1, a_1, a_1, c_4, b_2, b_2, b_1, b_2; c_3, c_2, c_1, c_4; z, x, y, u) ,$$

$$|u| < 1 , \quad \text{if} \quad |x| < r , \quad \left| \frac{y}{1-u} \right| < s , \quad \left| \frac{z}{1-u} \right| < t ,$$

$$\text{then} \quad r + (\sqrt{s} + \sqrt{t})^2 = 1 .$$

$$(2.2.9) \quad (1-u)^{-b_1} F_E (a_1, a_1, a_1, b_1, b_2, b_2; c_1, c_2, c_3; \frac{x}{1-u}, y, z)$$

$$= F_5^{(4)} (a_1, a_1, a_1, c_4, b_2, b_2, b_1, b_1; c_3, c_2, c_1, c_4; z, y, x, u) ,$$

$$|u| < 1 , \quad \text{if} \quad \left| \frac{x}{1-u} \right| < r , \quad |y| < s , \quad |z| < t , \quad \text{then} \quad r + (\sqrt{s} + \sqrt{t})^2 = 1 .$$

$$(2.2.10) \quad (1-u)^{-a_1} F_F (a_1, a_1, a_1, b_1, b_2, b_1; c_1, c_2, c_2; \frac{x}{1-u}, \frac{y}{1-u}, \frac{z}{1-u})$$

$$= K_8 (a_1, a_1, a_1, a_1, b_1, b_1, b_2, c_3; c_2, c_1, c_2, c_3; y, x, z, u) ,$$

$$|u| < 1 , \quad \text{if} \quad \left| \frac{x}{1-u} \right| < r , \quad \left| \frac{y}{1-u} \right| < s , \quad \left| \frac{z}{1-u} \right| < t ,$$

$$\text{then} \quad (1-s)(s-t) = rs .$$

$$(2.2.11) \quad (1-u)^{-b_1} F_F (a_1, a_1, a_1, b_1, b_2, b_1; c_1, c_2, c_2; \frac{x}{1-u}, y, \frac{z}{1-u})$$

$$= F_{15}^{(4)} (a_1, a_1, a_1, c_3, b_1, b_1, b_2, b_1; c_2, c_1, c_2, c_3; z, x, y, u) ,$$

$$|u| < 1 , \text{ if } \left| \frac{x}{1-u} \right| < r , \quad |y| < s , \quad \left| \frac{z}{1-u} \right| < t ,$$

$$\text{then } (1-s)(s-t) = rs .$$

$$(2.2.12) \quad (1-u)^{-b_2} F_F (a, a, a, h_1, b_2, b_1; c_1, c_2, c_2; x, \frac{y}{1-u}, z)$$

$$= F_{17}^{(4)} (a, a, a, c_3, h_1, b_1, b_2, b_2; c_2, c_1, c_2, c_3; z, x, y, u) ,$$

$$|u| < 1 , \text{ if } \left| \frac{y}{1-u} \right| < s , \quad |x| < r , \quad |z| < t ,$$

$$\text{then } (1-s)(s-t) = rs .$$

$$(2.2.13) \quad (1-u)^{-a} F_G (a, a, a, b_1, b_2, b_3; c_1, c_2, c_2; \frac{x}{1-u}, \frac{y}{1-u}, \frac{z}{1-u})$$

$$= K_{13} (a, a, a, a; b_3, b_2, b_1, c_3; c_2, c_2, c_1, c_3; z, y, x, u) ,$$

$$|u| < 1 , \text{ if } \left| \frac{x}{1-u} \right| < r , \quad \left| \frac{y}{1-u} \right| < s , \quad \left| \frac{z}{1-u} \right| < t ,$$

$$\text{then } r + s = 1 , \quad r + t = 1 .$$

$$(2.2.14) \quad (1-u)^{-b_1} F_G (a, a, a, h_1, b_2, b_3; c_1, c_2, c_2; \frac{x}{1-u}, y, z)$$

$$= F_{23}^{(4)} (a, a, a, c_3, b_1, b_2, b_3, b_1; c_1, c_2, c_2, c_3; x, y, z, u) ,$$

$$|u| < 1 , \text{ if } \left| \frac{x}{1-u} \right| < r , \quad |y| < s , \quad |z| < t ,$$

$$\text{then } r + s = 1 , \quad r + t = 1 .$$

$$(2.2.15) \quad (1-u)^{-h_2} F_G(a, a, a, b_1, b_2, b_3; c_1, c_2, c_2; x, \frac{v}{1-u}, z)$$

$$= F_{22}^{(4)}(a, a, a, c_3, b_2, b_3, b_1, b_2; c_2, c_2, c_1, c_3; y, z, x, u),$$

$$|u| < 1, \text{ if } |x| < r, \quad \left| \frac{v}{1-u} \right| < s, \quad |z| < t,$$

$$\text{then } r + s = 1, \quad r + t = 1.$$

$$(2.2.16) \quad (1-u)^{-a_1} F_K(a_1, a_2, a_2, b_1, b_2, b_1; c_1, c_2, c_3; \frac{x}{1-u}, y, z)$$

$$= F_8^{(4)}(a, a_1, a_2, a_2, b_1, c_4, b_1, b_2; c_1, c_4, c_3, c_2; x, u, z, y),$$

$$|u| < 1, \text{ if } \left| \frac{x}{1-u} \right| < r, \quad |y| < s, \quad |z| < t,$$

$$\text{then } (1-r)(1-s) = t.$$

$$(2.2.17) \quad (1-u)^{-a_2} F_K(a_1, a_2, a_2, b_1, b_2, b_1; c_1, c_2, c_3; x, \frac{v}{1-u}, \frac{z}{1-u})$$

$$= F_6^{(4)}(a_2, a_2, a_2, a_1, b_1, b_2, c_4, b_1; c_3, c_2, c_4, c_1; z, y, u, x),$$

$$|u| < 1, \text{ if } |x| < r, \quad \left| \frac{y}{1-u} \right| < s, \quad \left| \frac{z}{1-u} \right| < t,$$

$$\text{then } (1-s)(1-r) = t.$$

$$(2.2.18) \quad (1-u)^{-a_1} F_M(a_1, a_2, a_2, b_1, b_2, b_1; c_1, c_2, c_2; \frac{x}{1-u}, y, z)$$

$$= F_{31}^{(4)}(a_2, a_2, a_1, a_1, b_1, b_2, b_1, c_3; c_2, c_2, c_1, c_3; x, y, z, u),$$

$$|u| < 1, \text{ if } \left| \frac{x}{1-u} \right| < r, \quad |y| < s, \quad |z| < t,$$

then $r + t = 1 - s$.

47

$$(2.2.19) \quad (1-u)^{-a_2} F_M (a_1, a_2, a_2, b_1, b_2, h_1; c_1, c_2, c_2; x, \frac{v}{1-u}, \frac{z}{1-u})$$

$$= F_{22}^{(4)} (a_2, a_2, a_2, a_1, b_1, b_2, c_3, b_1; c_2, c_2, c_3, c_1; z, y, x, u) ,$$

$$|u| < 1 \quad \text{if} \quad |x| < r , \quad \left| \frac{v}{1-u} \right| < s , \quad \left| \frac{z}{1-u} \right| < t ,$$

then $r + t = 1 - s$.

$$(2.2.20) \quad (1-u)^{-h_1} F_M (a_1, a_2, a_2, h_1, h_2, b_1; c_1, c_2, c_2; \frac{x}{1-u}, y, \frac{z}{1-u})$$

$$= F_{25}^{(4)} (h_1, b_1, b_1, h_2, a_2, c_3, a_1, a_2; c_2, c_3, c_1, c_2; z, u, x, y) ,$$

$$|u| < 1 , \quad \text{if} \quad \left| \frac{x}{1-u} \right| < r , \quad |y| < s , \quad \left| \frac{z}{1-u} \right| < t ,$$

then $r + t = 1 - s$.

$$(2.2.21) \quad (1-u)^{-a_1} F_N (a_1, a_2, a_3, b_1, b_2, h_1; c_1, c_2, c_2; \frac{x}{1-u}, y, z)$$

$$= F_{37}^{(4)} (h_1, b_1, c_3, a_2, a_1, a_3, a_1, b_2; c_1, c_2, c_3, c_2; x, z, u, y) ,$$

$$|u| < 1 , \quad \text{if} \quad \left| \frac{x}{1-u} \right| < r , \quad |y| < s , \quad |z| < t ,$$

then $(1-r)s + (1-s)t = 0$,

$$(2.2.22) \quad (1-u)^{-a_2} F_N (a_1, a_2, a_3, b_1, b_2, b_1; c_1, c_2, c_2; x, \frac{v}{1-u}, z)$$

$$= F_{35}^{(4)} (a_2, a_2, h_1, h_1, b_2, c_3, a_3, a_1; c_2, c_3, c_2, c_1; y, u, z, x) ,$$

$$|u| < 1 , \quad |x| < r , \quad \left| \frac{v}{1-u} \right| < s , \quad |z| < t ,$$

then $(1-r)s + (1-s)t = 0$.

$$(2.2.23) \quad (1-u)^{-b_1} F_N (a_1, a_2, a_3, b_1, b_2, b_1; c_1, c_2, c_2; \frac{x}{1-u}, y, \frac{z}{1-u})$$

$$= F_{26}^{(4)} (b_1, b_1, b_1, b_2, a_3, c_3, a_1, a_2; c_2, c_3, c_1, c_2; z, u, x, y),$$

$$|u| < 1, \quad \text{if} \quad \left| \frac{x}{1-u} \right| < r, \quad |y| < s, \quad \left| \frac{z}{1-u} \right| < t,$$

$$\text{then} \quad (1-r)s + (1-s)t = 0.$$

$$(2.2.24) \quad (1-u)^{-a_1} F_P (a_1, a_2, a_1, b_1, b_1, b_2; c_1, c_2, c_2; \frac{x}{1-u}, y, \frac{z}{1-u})$$

$$= F_{24}^{(4)} (a_1, a_1, a_1, a_2, b_1, b_2, c_3, b_1; c_1, c_2, c_3, c_2; x, z, u, y),$$

$$|u| < 1, \quad \text{if} \quad \left| \frac{x}{1-u} \right| < r, \quad |y| < s, \quad \left| \frac{z}{1-u} \right| < t,$$

$$\text{then} \quad (st - s - t)^2 = 4rst.$$

FRACTIONAL DERIVATIVES OF CERTAIN
HYPERGEOMETRIC FUNCTIONS OF FOUR VARIABLES

3.1 Introduction In the previous chapter II , we established some relations between hypergeometric functions of three and four variables .

Recently, Srivastava and Goyal [14] have derived several fractional derivatives formulae involving the multivariable H - function defined by Srivastava and Panda [15, p. 271, eq. (4.1) et seq.] and studied by them see ([16-19]; see also [12]) .

In the present chapter, for special interest, we apply same techniques in order to derive fractional derivatives involving certain hypergeometric functions of four variables K_1, \dots, K_{21} of Exton [4,5,6] and those functions of Sharma and Parihar [10], which are not included in Exton's functions [4,5] .

3.2 Fractional Derivatives involving OneFractional Derivative Operator

Making an appeal to the formula [9, p. 67]

$$(3.2.1) \quad D_x^\mu \{ x^\lambda \} = \frac{\Gamma(\lambda + 1)}{\Gamma(\lambda - \mu + 1)} \cdot x^{\lambda - \mu}, \quad \operatorname{Re}(\lambda) > -1.$$

we have

$$D_t^{\lambda_4 - \mu_4} \left\{ t^{\lambda_4 - 1} K_2(a_1, a_1, a_1, \mu_4, b_1, b_1, b_1, b_1; c_1, c_2, c_3, c_4; x, y, z, t) \right\} \\ = \sum_{m, n, p, q=0}^{\infty} D_t^{\lambda_4 - \mu_4} \left\{ t^{\lambda_4 - 1} \frac{(a_1)_{m+n+p} (\mu_4)_q (b_1)_{m+n+p+q}}{(c_1)_m (c_2)_m (c_3)_p (c_4)_q} \cdot \frac{x^m}{m!} \cdot \frac{y^n}{n!} \cdot \frac{z^p}{p!} \cdot \frac{t^q}{q!} \right\}$$

Therefore

$$(3.2.2) \quad D_t^{\lambda_4 - \mu_4} \left\{ t^{\lambda_4 - 1} K_2(a_1, a_1, a_1, \mu_4, b_1, b_1, b_1, b_1; c_1, c_2, c_3, c_4; x, y, z, t) \right\} \\ = \frac{\Gamma(\lambda_4)}{\Gamma(\mu_4)} t^{\mu_4 - 1} K_2(a_1, a_1, a_1, \lambda_4, b_1, b_1, b_1, b_1; c_1, c_2, c_3, c_4; x, y, z, t),$$

$$\operatorname{Re}(\lambda_4) > 0.$$

Applying the same technique, we derive the following fractional derivatives :

$$(3.2.3) \quad D_t^{\lambda_4 - \mu_4} \left\{ t^{\lambda_4 - 1} K_{11}(a_1, a_2, a_3, a_4, b_1, b_1, b_1, b_1; c_1, c_1, c_1, \lambda_4; x, y, z, t) \right\} \\ = \frac{\Gamma(\lambda_4)}{\Gamma(\mu_4)} t^{\mu_4 - 1} K_{11}(a_1, a_2, a_3, a_4, b_1, b_1, b_1, b_1; c_1, c_1, c_1, \mu_4; x, y, z, t),$$

$$\operatorname{Re}(\lambda_4) > 0.$$

$$(3.2.4) \quad D_t^{\lambda_4 - \mu_4} \left\{ t^{\lambda_4 - 1} K_{15}(a_1, a_1, a_1, \mu_4, b_1, b_2, b_3, b_4; c_1, c_1, c_1, c_1; x, y, z, t) \right\} \\ = \frac{\Gamma(\lambda_4)}{\Gamma(\mu_4)} t^{\mu_4 - 1} K_{15}(a_1, a_1, a_1, \lambda_4, b_1, b_2, b_3, b_4; c_1, c_1, c_1, c_1; x, y, z, t),$$

$$\operatorname{Re}(\lambda_4) > 0.$$

$$\begin{aligned}
 (3.2.5) \quad & D_t^{\lambda_4 - \mu_4} \left\{ t^{\lambda_4 - 1} F_5^{(4)}(a_1, a_1, a_1, \mu_4, b_1, b_1, b_2, b_2; c_1, c_2, c_3, c_4; x, y, z, t) \right\} \\
 &= \frac{\Gamma(\lambda_4)}{\Gamma(\mu_4)} t^{\mu_4 - 1} F_5^{(4)}(a_1, a_1, a_1, \lambda_4, b_1, b_1, b_2, b_2; c_1, c_2, c_3, c_4; x, y, z, t), \\
 &\text{Re}(\lambda_4) > 0.
 \end{aligned}$$

$$\begin{aligned}
 (3.2.6) \quad & D_t^{\lambda_4 - \mu_4} \left\{ t^{\lambda_4 - 1} F_{42}^{(4)}(a_1, a_1, a_1, \mu_4; b_1, b_1, b_2, b_2; c_1, c_2, c_1, c_2; x, y, z, t) \right\} \\
 &= \frac{\Gamma(\lambda_4)}{\Gamma(\mu_4)} t^{\mu_4 - 1} F_{42}^{(4)}(a_1, a_1, a_1, \lambda_4; b_1, b_1, b_2, b_2; c_1, c_2, c_1, c_2; x, y, z, t), \\
 &\text{Re}(\lambda_4) > 0.
 \end{aligned}$$

$$\begin{aligned}
 (3.2.7) \quad & D_t^{\lambda_4 - \mu_4} \left\{ t^{\lambda_4 - 1} F_{68}^{(4)}(a_1, a_1, a_2, a_2, b_1, b_2, b_1, b_2; c_1, c_1, c_1, \lambda_4; x, y, z, t) \right\} \\
 &= \frac{\Gamma(\lambda_4)}{\Gamma(\mu_4)} t^{\mu_4 - 1} F_{68}^{(4)}(a_1, a_1, a_2, a_2, b_1, b_2, b_1, b_2; c_1, c_1, c_1, \mu_4; x, y, z, t), \\
 &\text{Re}(\lambda_4) > 0.
 \end{aligned}$$

3.3 Use of two Fractional Derivative Operators

In this section, we derive the following relations :

$$\begin{aligned}
 (3.3.1) \quad & D_y^{\lambda_2 - \mu_2} D_t^{\lambda_4 - \mu_4} \left\{ y^{\lambda_2 - 1} t^{\lambda_4 - 1} K_4(a_1, a_1, a_2, a_2, b_1, b_1, b_1, b_1; c_1, \lambda_2, \right. \\
 &\quad \left. c_1, \lambda_4; x, y, z, t) \right\} \\
 &= \frac{\Gamma(\lambda_2) \Gamma(\lambda_4)}{\Gamma(\mu_2) \Gamma(\mu_4)} y^{\mu_2 - 1} t^{\mu_4 - 1} K_4(a_1, a_1, a_2, a_2, b_1, b_1, b_1, b_1; c_1, \mu_2, c_1, \mu_4; x, y, z, t), \\
 &\text{Re}(\lambda_2) > 0, \quad \text{Re}(\lambda_4) > 0.
 \end{aligned}$$

$$\begin{aligned}
 (3.3.2) \quad & D_z^{\lambda_3 - \mu_3} D_t^{\lambda_4 - \mu_4} \left\{ z^{\lambda_3 - 1} t^{\lambda_4 - 1} K_7(a_1, a_1, \mu_3, \mu_4, b_1, b_1, b_1, b_1; \right. \\
 & \left. c_1, c_2, c_1, c_2; x, y, z, t) \right\} \\
 = & \frac{\Gamma(\lambda_3) \Gamma(\lambda_4)}{\Gamma(\mu_3) \Gamma(\mu_4)} z^{\mu_3 - 1} t^{\mu_4 - 1} K_7(a_1, a_1, \lambda_3, \lambda_4, b_1, b_1, b_1, b_1; c_1, c_2, c_1, c_2; \\
 & x, y, z, t),
 \end{aligned}$$

$$\operatorname{Re}(\lambda_3) > 0, \operatorname{Re}(\lambda_4) > 0.$$

$$\begin{aligned}
 (3.3.3) \quad & D_y^{\lambda_2 - \mu_2} D_t^{\lambda_4 - \mu_4} \left\{ y^{\lambda_2 - 1} t^{\lambda_4 - 1} K_8(a_1, a_1, a_2, a_3, b_1, b_1, b_1, b_1; \right. \\
 & \left. c_1, \lambda_2, c_1, \lambda_4; x, y, z, t) \right\} \\
 = & \frac{\Gamma(\lambda_2) \Gamma(\lambda_4)}{\Gamma(\mu_2) \Gamma(\mu_4)} y^{\mu_2 - 1} t^{\mu_4 - 1} K_8(a_1, a_1, a_2, a_3, b_1, b_1, b_1, b_1; c_1, \mu_2, c_1, \mu_4; \\
 & x, y, z, t),
 \end{aligned}$$

$$\operatorname{Re}(\lambda_2) > 0, \operatorname{Re}(\lambda_4) > 0.$$

$$\begin{aligned}
 (3.3.4) \quad & D_z^{\lambda_3 - \mu_3} D_t^{\lambda_4 - \mu_4} \left\{ z^{\lambda_3 - 1} t^{\lambda_4 - 1} K_{13}(a_1, a_2, a_3, a_4, b_1, b_1, b_1, b_1; c_1, c_1, \right. \\
 & \left. \lambda_3, \lambda_4; x, y, z, t) \right\} \\
 = & \frac{\Gamma(\lambda_3) \Gamma(\lambda_4)}{\Gamma(\mu_3) \Gamma(\mu_4)} z^{\mu_3 - 1} t^{\mu_4 - 1} K_{13}(a_1, a_2, a_3, a_4, b_1, b_1, b_1, b_1; c_1, c_1, \mu_3, \\
 & \mu_4; x, y, z, t),
 \end{aligned}$$

$$\operatorname{Re}(\lambda_3) > 0, \operatorname{Re}(\lambda_4) > 0.$$

$$\begin{aligned}
 (3.3.5) \quad & D_z^{\lambda_3 - \mu_3} D_t^{\lambda_4 - \mu_4} \left\{ z^{\lambda_3 - 1} t^{\lambda_4 - 1} K_{19}(a_1, a_1, \mu_3, \mu_4, b_1, b_2, b_1, b_3; \right. \\
 & \left. c_1, c_1, c_1, c_1; x, y, z, t) \right\} \\
 = & \frac{\Gamma(\lambda_3) \Gamma(\lambda_4)}{\Gamma(\mu_3) \Gamma(\mu_4)} z^{\mu_3 - 1} t^{\mu_4 - 1} K_{19}(a_1, a_1, \lambda_3, \lambda_4, b_1, b_2, b_1, b_3; c_1, c_1, \\
 & c_1, c_1; x, y, z, t),
 \end{aligned}$$

$$\operatorname{Re}(\lambda_4) > 0, \operatorname{Re}(\lambda_3) > 0.$$

$$(3.3.6) \quad D_z^{\lambda_3-\mu_3} D_t^{\lambda_4-\mu_4} \left\{ z^{\lambda_3-1} t^{\lambda_4-1} K_{21}(a_1, a_1, \mu_3, \mu_4, b_1, b_2, b_3, b_4; c_1, c_1, c_1, c_1; x, y, z, t) \right\}$$

$$= \frac{\Gamma(\lambda_3) \Gamma(\lambda_4)}{\Gamma(\mu_3) \Gamma(\mu_4)} z^{\mu_3-1} t^{\mu_4-1} K_{21}(a_1, a_1, \lambda_3, \lambda_4, b_1, b_2, b_3, b_4; c_1, c_1, c_1, c_1; x, y, z, t),$$

$$\operatorname{Re}(\lambda_3) > 0, \quad \operatorname{Re}(\lambda_4) > 0.$$

$$(3.3.7) \quad D_z^{\lambda_3-\mu_3} D_t^{\lambda_4-\mu_4} \left\{ z^{\lambda_3-1} t^{\lambda_4-1} F_4^{(4)}(a_1, a_1, a_1, \mu_4, b_1, b_1, \mu_3, b_1; c_1, c_2, c_3, c_4; x, y, z, t) \right\}$$

$$= \frac{\Gamma(\lambda_3) \Gamma(\lambda_4)}{\Gamma(\mu_3) \Gamma(\mu_4)} z^{\mu_3-1} t^{\mu_4-1} F_4^{(4)}(a_1, a_1, a_1, \lambda_4, b_1, b_1, \lambda_3, b_1; c_1, c_2, c_3, c_4; x, y, z, t),$$

$$\operatorname{Re}(\lambda_3) > 0, \quad \operatorname{Re}(\lambda_4) > 0.$$

$$(3.3.8) \quad D_y^{\lambda_2-\mu_2} D_t^{\lambda_4-\mu_4} \left\{ y^{\lambda_2-1} t^{\lambda_4-1} F_8^{(4)}(a_1, a_1, a_2, a_2, b_1, \mu_2, b_1, \mu_4; c_1, c_2, c_3, c_4; x, y, z, t) \right\}$$

$$= \frac{\Gamma(\lambda_2) \Gamma(\lambda_4)}{\Gamma(\mu_2) \Gamma(\mu_4)} y^{\mu_2-1} t^{\mu_4-1} F_8^{(4)}(a_1, a_1, a_2, a_2, b_1, \lambda_2, b_1, \lambda_4; c_1, c_2, c_3, c_4; x, y, z, t),$$

FUNCTIONS OF
SEVERAL
VARIABLES**

CHAPTER IV

GENERATING RELATIONS FOR MULTIPLE
HYPERGEOMETRIC FUNCTIONS OF SEVERAL VARIABLES

4.1 INTRODUCTION: Chandel [1] established

generating relations for his multiple hypergeometric function ${}_{(1)C}^{(k)E(n)}$ related to Lauricella's $F_C^{(n)}$ [7] and for Exton's multiple hypergeometric function ${}_{(1)D}^{(k)E(n)}$ [4] related to Lauricella's $F_D^{(n)}$ [7]. Chandel and Gupta [2] introduced three intermediate Lauricella's ${}_{AC}^{(k)F(n)}$, ${}_{AD}^{(k)F(n)}$, ${}_{BD}^{(k)F(n)}$ and obtained generating relations involving them.

In this chapter, we obtain generating relations for generalized multiple hypergeometric function of Srivastava and Daoust [8,9] (Also see Srivastava and Karlsson [10, p 37, (21)], Exton [5, p, 107]) and discuss their special cases to derive new generating relations for ${}_{(1)C}^{(k)E(n)}$ of Chandel [1], ${}_{(1)D}^{(k)E(n)}$, ${}_{(2)D}^{(k)E(n)}$ of Exton [4], ${}_{AC}^{(k)F(n)}$, ${}_{AD}^{(k)F(n)}$ and ${}_{BD}^{(k)F(n)}$ of Chandel and Gupta [2] (For ${}_{(1)D}^{(k)E(n)}$, ${}_{(2)D}^{(k)E(n)}$, ${}_{(1)C}^{(k)E(n)}$ also see Exton [5, pp, 89 - 90, (3.4.1), (3.4.2), (3.4.3)]).

4.2. GENERATING RELATIONS

In this section, we derive the following generating relations for generalized multiple hypergeometric function of Srivastava and Daoust $\left[8, 9, 10 \right]$:

$$\begin{aligned}
 (4.2.1) \quad & (1-u)^{-a_i} \left[\begin{matrix} A: B^1; \dots; B^{(n)} \\ C: D^1; \dots; D^{(n)} \end{matrix} \right] \left(\begin{matrix} \left[(a): \theta^1, \dots, \theta^{(n)} \right]; \\ \left[(c): \Phi^1, \dots, \Phi^{(n)} \right]; \\ \left[(b^1): \Phi^1 \right]; \dots; \left[(b^{(n)}): \Phi^{(n)} \right]; \\ \left[(d^1): \delta^1 \right]; \dots; \left[(d^{(n)}): \delta^{(n)} \right]; \frac{x_1}{(1-u)\theta_i^1}, \dots, \frac{x_n}{(1-u)\theta_i^{(n)}} \end{matrix} \right) \\
 = & \sum_{k=0}^{\infty} \frac{u^k (a_i)_k}{k!} \left[\begin{matrix} A: B^1; \dots; B^{(n)} \\ C: D^1; \dots; D^{(n)} \end{matrix} \right] \left(\begin{matrix} \left[(a): \theta^1, \dots, \theta^{(n)} \right]_i, \\ \left[(c): \Phi^1, \dots, \Phi^{(n)} \right]; \\ \left[a_i + k; \theta_i^1, \dots, \theta_i^{(n)} \right]; \left[(b^1): \Phi^1 \right]; \dots; \left[(b^{(n)}): \Phi^{(n)} \right]; \\ \left[(c^1): \Phi^1 \right]; \dots; \left[(c^{(n)}): \Phi^{(n)} \right]; x_1, \dots, x_n \end{matrix} \right),
 \end{aligned}$$

where $\left[(a): \theta^1, \dots, \theta^{(n)} \right]_i$ denotes $\left[(a): \theta^1, \dots, \theta^{(n)} \right]$ excluding $\left[a_i: \theta_i^1, \dots, \theta_i^{(n)} \right]$ and $|u| < 1$,

$$1 + \sum_{j=1}^C \Phi_j^{(r)} + \sum_{j=1}^{D^{(r)}} \delta_j^{(r)} - \prod_{j=1}^A \theta_j^{(r)} - \prod_{j=1}^{B^{(r)}} \Phi_j^{(r)} > 0,$$

$r = 1, \dots, n, i = 1, \dots, A$.

$$(4.2.2) \quad (1-u)^{-h_j^{(i)}} \prod_{C:D'; \dots; D^{(n)}}^{A:B'; \dots; B^{(n)}} \left(\begin{array}{l} \neg(a): \theta', \dots, \theta^{(n)} \neg; \\ \neg(c): \phi', \dots, \phi^{(n)} \neg; \end{array} \right.$$

$$\left. \begin{array}{l} \neg(b'): \phi' \neg; \dots; \neg(b^{(n)}): \phi^{(n)} \neg; \\ \neg(d'): s' \neg; \dots; \neg(d^{(n)}): s^{(n)} \neg; \end{array} \right) x_1, \dots, \frac{x_i}{(1-u)^{h_j^{(i)}}}, \dots, x_n$$

$$= \sum_{k=0}^{\infty} \frac{u^k}{k!} h_j^{(i)} \prod_{C:D'; \dots; D^{(n)}}^{A:B'; \dots; B^{(n)}} \left(\begin{array}{l} \neg(a): \theta', \dots, \theta^{(n)} \neg; \neg(b'): \phi' \neg; \\ \neg(c): \phi', \dots, \phi^{(n)} \neg; \neg(d'): s' \neg; \end{array} \right.$$

$$\dots; \neg(b^{(i)}): \phi^{(i)} \neg_j, \neg_{b_j^{(j)}+k} \phi_j^{(i)} \neg; \dots; \neg(b^{(n)}): \phi^{(n)} \neg;$$

$$\dots; \neg(d^{(n)}): s^{(n)} \neg; \left. \right) x_1, \dots, x_n,$$

where $\neg_{b^{(i)}} \phi^{(i)} \neg_j$ denotes $\neg(b^{(i)}): \phi^{(i)} \neg$

excluding $\neg_{b_j^{(i)}} \phi_j^{(i)} \neg$, $j = 1, \dots, B^{(i)}$, and

$$|u| < 1,$$

$$1 + \sum_{r=1}^C \tau_r^{(i)} + \sum_{r=1}^{D^{(i)}} s_r^{(i)} - \prod_{r=1}^A \theta_r^{(i)} - \prod_{r=1}^{B^{(i)}} \phi_r^{(i)} > 0,$$

$$i = 1, \dots, n.$$

4.3 REDUCTION FORMULAE

An appeal to (4.2.1) and (4.2.2) gives following reduction formulae respectively :

$$\begin{aligned}
 (4.3.1) \quad & (1-u)^{-a_i} F_{C:D^1; \dots; D^{(n)}}^{A:B^1; \dots; B^{(n)}} \left(\begin{array}{l} \neg(a): \theta^1, \dots, \theta^{(n)} \neg; \\ \neg(c): \phi^1, \dots, \phi^{(n)} \neg; \\ \neg(b^1): \phi^1 \neg; \dots; \neg(b^{(n)}): \phi^{(n)} \neg; \\ \neg(d^1): \delta^1 \neg; \dots; \neg(d^{(n)}): \delta^{(n)} \neg; \end{array} \frac{x_1}{(1-u)^{\theta_i^1}}, \dots, \frac{x_n}{(1-u)^{\theta_i^{(n)}}} \right) \\
 & = F_{C:D^1; \dots; D^{(n)}, 0}^{A:B^1; \dots; B^{(n)}, 0} \left(\begin{array}{l} \neg(a): \theta^1, \dots, \theta^{(n)}, \Delta^i \neg; \\ \neg(c): \phi^1, \dots, \phi^{(n)}, 0 \neg; \\ \neg(b^1): \phi^1 \neg; \dots; \neg(b^{(n)}): \phi^{(n)} \neg; -; \\ \neg(d^1): \delta^1 \neg; \dots; \neg(d^{(n)}): \delta^{(n)} \neg; -; \end{array} x_1, \dots, x_n, u \right)
 \end{aligned}$$

where Δ^i stands for Kronecker delta Δ_j^i ; $i, j \in \{1, \dots, A\}$

$|u| < 1$,

$$1 + \sum_{j=1}^C \phi_j^{(r)} + \sum_{j=1}^{D^{(r)}} \delta_j^{(r)} - \prod_{j=1}^A \theta_j^{(r)} - \prod_{j=1}^{B^{(r)}} \phi_j^{(r)} > 0 ,$$

$r=1, \dots, n$.

following those generating relations which have not been traced

out yet now for $(k)_{E(n)}^{(1) C}$ of Chandel [1] $(k)_{E(n)}^{(2) D}$ of Exton [4]
 and $(k)_{F(n)}^{AC}$, $(k)_{F(n)}^{AD}$, $(k)_{F(n)}^{BD}$ of Chandel and
 Gupta [2].

$$(4.4.1) \quad (1-t)^{-a} (k)_{E(n)}^{(1) C} [a, a', b; c_1, \dots, c_n; \frac{x_1}{1-t}, \dots, \frac{x_k}{1-t}, x_{k+1}, \dots, x_n] \\
= \sum_{r=0}^{\infty} \frac{t^r}{r!} (a)_r (k)_{E(n)}^{(1) C} [a+r, a', b; c_1, \dots, c_n; x_1, \dots, x_n]$$

$$|t| < 1, \text{ if } \left| \frac{x_i}{1-t} \right| < r_i, \quad i = 1, \dots, k, \quad |x_j| < r_j,$$

$$j = k+1, \dots, n, \text{ then } (\sqrt{r_1} + \dots + \sqrt{r_k})^2 + (\sqrt{r_{k+1}} + \dots + \sqrt{r_n})^2 = 1.$$

$$(4.4.2) \quad (1-t)^{-a'} (k)_{E(n)}^{(1) C} [a, a', b; c_1, \dots, c_n; x_1, \dots, x_k, \frac{x_{k+1}}{1-t}, \dots, \frac{x_n}{1-t}] \\
= \sum_{r=0}^{\infty} \frac{t^r}{r!} (b)_r (k)_{E(n)}^{(1) C} [a, a'+r, b; c_1, \dots, c_n; x_1, \dots, x_n]$$

$$|t| < 1, \text{ if } |x_i| < r_i, \quad i = 1, \dots, k; \quad \left| \frac{x_j}{1-t} \right| < r_j, \quad j = k+1, \dots, n$$

**KARLSSON'S MULTIPLE
HYPERGEOMETRIC
FUNCTION
AND CONFLUENT
FORMS OF CERTAIN
GENERALIZED
HYPERGEOMETRIC
FUNCTIONS
OF SEVERAL
VARIABLES**

CHAPTER V

KARLSSON'S MULTIPLE HYPERGEOMETRIC FUNCTION AND
CONFLUENT FORMS OF CERTAIN GENERALIZED HYPERGEOMETRIC
FUNCTIONS OF SEVERAL VARIABLES

5.1 Introduction Exton [4,6] introduced two multiple

hypergeometric functions $(k)_{E(n)}^{(1)D}$, $(k)_{E(n)}^{(2)D}$ related to Lauricella's $F_D^{(n)}$ [8]. Prompted by this work Chandel [1] introduced multiple hypergeometric function $(k)_{E(n)}^{(1)C}$ related to Lauricella's $F_C^{(n)}$

[8]. Further Chandel and Gupta [2] introduced three intermediate Lauricella's functions $(k)_{F(n)}^{AD}$, $(k)_{F(n)}^{BD}$, $(k)_{F(n)}^{AC}$ and derived

some of their confluent forms $(k)_{\phi(n)}^{(1)AC}$, $(k)_{\phi(n)}^{(2)AC}$, $(k)_{\phi(n)}^{(1)AD}$,

$(k)_{\phi(n)}^{(1)BD}$, $(k)_{\phi(n)}^{(2)BD}$. Following Chandel and Gupta [2],

Karlsson [7] introduced one more intermediate Lauricella function $(k)_{F(n)}^{CD}$.

A paper from this chapter entitled "Karlsson's multiple hypergeometric function and its confluent forms" has been published in Jñānābha, 19(1989), 173 - 185.

In the present chapter, we study Karlsson's multiple hypergeometric function ${}^{(k)}F_{CD}^{(n)}$ and introduce some confluent forms of above multiple hypergeometric functions of several variables and derive their generating relations and integral representations with their applications in obtaining their recurrence relations .

5.2 DEFINITIONS OF CONFLUENT FORMS . For confluent forms, we consider

$$\begin{aligned}
 (5.2.1) \quad & \lim_{b_1, \dots, b_k \rightarrow \infty} {}^{(k)}F_{CD}^{(n)} \left[a, b, b_1, \dots, b_k; c, c_{k+1}, \dots, c_n; \frac{x_1}{b_1} \dots \frac{x_k}{b_k}, x_{k+1}, \dots, x_n \right] \\
 &= \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a)_{m_1+\dots+m_n} (b)_{m_{k+1}+\dots+m_n}}{(c)_{m_1+\dots+m_k} (c_{k+1})_{m_{k+1}} \dots (c_n)_{m_n}} \cdot \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!} \\
 &= {}^{(k)}\phi_{(1)-CD}^{(n)} \left[a, b; c, c_{k+1}, \dots, c_n; x_1, \dots, x_n \right], \quad k \neq 0.
 \end{aligned}$$

For $k = 0$, it reduces to Lauricella' $F_C^{(n)}$.

$$(5.2.2) \quad \lim_{b \rightarrow \infty} {}^{(k)}F_{CD}^{(n)} \left[a, b, b_1, \dots, b_k; c, c_{k+1}, \dots, c_n; x_1, \dots, x_k, \frac{x_{k+1}}{b} \dots \frac{x_n}{b} \right]$$

$$\begin{aligned}
&= \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a)_{m_1+\dots+m_n} (b_1)_{m_1} \dots (b_k)_{m_k}}{(c)_{m_1+\dots+m_k} (c_{k+1})_{m_{k+1}} \dots (c_n)_{m_n}} \cdot \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!} \\
&= \frac{(k) \phi^{(n)}_{CD}}{(2) \phi_{CD}} \left[a, b_1, \dots, b_k; c, c_{k+1}, \dots, c_n; x_1, \dots, x_n \right], \quad k \neq n.
\end{aligned}$$

For $k = n$, it reduces to Lauricella's $F_D^{(n)}$.

$$(5.2.3) \lim_{a \rightarrow \infty} \frac{(k) \phi^{(n)}_{CD}}{(2) \phi_{CD}} \left[a, b, b_1, \dots, b_k; c, c_{k+1}, \dots, c_n; \frac{x_1}{a}, \dots, \frac{x_n}{a} \right]$$

$$\begin{aligned}
&= \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(b)_{m_{k+1}+\dots+m_n} (b_1)_{m_1} \dots (b_k)_{m_k}}{(c)_{m_1+\dots+m_k} (c_{k+1})_{m_{k+1}} \dots (c_n)_{m_n}} \cdot \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!}
\end{aligned}$$

$$= \frac{(k) \phi^{(n)}_{CD}}{(3) \phi_{CD}} \left[b, b_1, \dots, b_k; c, c_{k+1}, \dots, c_n; x_1, \dots, x_n \right], \quad k \neq 0, \quad k \neq n.$$

For $k = n$, it reduces to $\phi_2^{(n)}$ while for $k = 0$, it reduces to $\phi_2^{(n)}$.

$$(5.2.4) \lim_{c_{k+1}, \dots, c_n \rightarrow 0} \frac{(k) \phi^{(n)}_{CD}}{(2) \phi_{CD}} \left[a, b, b_1, \dots, b_k; c, c_{k+1}, \dots, c_n; x_1, \dots, x_k, c_{k+1} x_{k+1}, \dots, x_n c_n \right]$$

$$= \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a)_{m_1+\dots+m_n} (b)_{m_{k+1}+\dots+m_n} (b_1)_{m_1} \dots (b_k)_{m_k}}{(c)_{m_1+\dots+m_k}} \cdot \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!}$$

$$= {}^{(k)}\phi_{(4)}^{(n)} \left[\begin{matrix} a, b, b_1, \dots, b_k; c; x_1, \dots, x_n \\ \end{matrix} \right], \quad k \neq n.$$

For $k = n$, it reduces to Lauricella's $F_D^{(n)}$.

$$(5.2.5) \lim_{c \rightarrow \infty} {}^{(k)}\phi_{CD}^{(n)} \left[\begin{matrix} a, b, b_1, \dots, b_k; c, c_{k+1}, \dots, c_n; cx_1, \dots, x_k, c, x_{k+1}, \dots, x_n \\ \end{matrix} \right]$$

$$= \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a)_{m_1+\dots+m_n} (b)_{m_{k+1}+\dots+m_n} (b_1)_{m_1} \dots (b_k)_{m_k}}{(c_{k+1})_{m_{k+1}} \dots (c_n)_{m_n}} \cdot \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!}$$

$$= {}^{(k)}\phi_{(5)}^{(n)} \left[\begin{matrix} a, b, b_1, \dots, b_k; c_{k+1}, \dots, c_n; x_1, \dots, x_n \\ \end{matrix} \right], \quad k \neq 0.$$

For $k = 0$, it reduces to $F_C^{(n)}$.

$$(5.2.6) \lim_{b, c \rightarrow \infty} {}^{(k)}\phi_{CD}^{(n)} \left[\begin{matrix} a, b, b_1, \dots, b_k; c, c_{k+1}, \dots, c_n; cx_1, \dots, cx_k, \frac{x_{k+1}}{b}, \dots, \frac{x_n}{b} \\ \end{matrix} \right]$$

$$\begin{aligned}
&= \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(a)_{m_1+\dots+m_n} (b_1)_{m_1} \dots (b_k)_{m_k}}{(c_{k+1})_{m_{k+1}} \dots (c_n)_{m_n}} \cdot \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!} \\

5.3 INTEGRAL REPRESENTATIONS

Making an appeal to Srivastava [10, p. 101]

$$(5.3.1) \quad (\lambda, m) = \frac{1}{\Gamma(\lambda)} \int_0^{\infty} e^{-t} \cdot t^{\lambda+m-1} dt$$

and Erdélyi [3, p.13]

$$(5.3.2) \quad \frac{1}{(\lambda, m)} = \frac{\Gamma(\lambda)}{2\pi i} \int_{-\infty}^{(0+)} e^t, t^{-\lambda-m} dt,$$

$\operatorname{Re}(\lambda) > 0$, $m = 0, 1, 2, \dots$,

we derive the following integral representations :

$$(5.3.3) \quad \begin{aligned} & {}^{(k)}F_{CD}^{(n)} [a, b, b_1, \dots, b_k; c, c_{k+1}, \dots, c_n; x_1, \dots, x_n] \\ &= \frac{\Gamma(c)}{2\pi i \Gamma(a) \Gamma(b)} \int_0^\infty \int_0^\infty \int_{-\infty}^{(0+)} e^{-(s+t-u)} s^{a-1} t^{b-1} u^{-c} \cdot {}_1F_0 [b_1; -; \frac{sx_1}{u}] \\ & \dots {}_1F_0 [b_k; -; \frac{sx_k}{u}] {}_0F_1 [-; c_{k+1}; stx_{k+1}] \dots {}_0F_1 [-; c_n; stx_n] ds dt du, \end{aligned}$$

where $\operatorname{Re}(a) > 0$, $\operatorname{Re}(b) > 0$.

$$(5.3.4) \quad \begin{aligned} & {}^{(k)}F_{(1)CD}^{(n)} [a, b; c, c_{k+1}, \dots, c_n; x_1, \dots, x_n] \\ &= \frac{\Gamma(c)}{2\pi i \Gamma(a) \Gamma(b)} \int_0^\infty \int_0^\infty \int_{-\infty}^{(0+)} e^{-(s+t-u)} \cdot e^{\frac{s}{u}(x_1 + \dots + x_k)} s^{a-1} t^{b-1} u^{-c} \\ & {}_0F_1 [-; c_{k+1}; stx_{k+1}] \dots {}_0F_1 [-; c_n; stx_n] ds dt du, \end{aligned}$$

where $\operatorname{Re}(a) > 0$, $\operatorname{Re}(b) > 0$.

$$(5.3.5) \quad \frac{(k) \Phi^{(n)}(2)}{(2) \Gamma_{CD}} \left[a, b_1, \dots, b_k; c, c_{k+1}, \dots, c_n; x_1, \dots, x_n \right]$$

$$= \frac{\Gamma(c)}{2\pi i \Gamma(a)} \int_0^\infty \int_{-\infty}^{(0+)} e^{-(s-u)} s^{a-1} u^{-c} {}_1F_0 \left[b_1; -; \frac{sx_1}{u} \right] \dots$$

$${}_1F_0 \left[b_k; -; \frac{sx_k}{u} \right] \cdot {}_0F_1 \left[-; c_{k+1}; sx_{k+1} \right] \dots {}_0F_1 \left[-; c_n; sx_n \right] ds du,$$

where $\operatorname{Re}(a) > 0$.

$$(5.3.6) \quad \frac{(k) \Phi^{(n)}(3)}{(3) \Gamma_{CD}} \left[b, b_1, \dots, b_k; c, c_{k+1}, \dots, c_n; x_1, \dots, x_n \right]$$

$$= \frac{\Gamma(c)}{2\pi i \Gamma(b)} \int_0^\infty \int_{-\infty}^{(0+)} e^{-(t-u)} t^{b-1} u^{-c} {}_1F_0 \left[b_1; -; \frac{x_1}{u} \right]$$

$$\dots {}_1F_0 \left[b_k; -; \frac{x_k}{u} \right] {}_0F_1 \left[-; c_{k+1}; tx_{k+1} \right] \dots {}_0F_1 \left[-; c_n; tx_n \right] dt du,$$

$\operatorname{Re}(b) > 0$.

$$(5.3.7) \quad \frac{(k) \Phi^{(n)}(4)}{(4) \Gamma_{CD}} \left[a, b, b_1, \dots, b_k; c; x_1, \dots, x_n \right]$$

 & {}_0F_1 \left[-; c; st_1 x_1 + \dots + st_k x_k + t_{k+1} x_{k+1} + \dots + t_n x_n \right] ds dt_1 \dots dt_n,
 \end{aligned}$$

$$\operatorname{Re}(a) > 0, \quad \operatorname{Re}(b_j) > 0, \quad j=1, \dots, n.$$

5.4 RECURRENCE RELATIONS

Making an appeal to Exton [5, p.115(3.5)]

$$(5.4.1) \quad {}_0F_1[-; c-1; x] - {}_0F_1[-; c; x] - \frac{x}{c(c-1)} {}_0F_1[-; c+1; x] = 0$$

and Slater [9, p.19]

$$(5.4.2) \quad c {}_1F_1[a; c; x] - c {}_1F_1[a-1; c; x] - x {}_1F_1[a; c+1; x] = 0$$

$$(5.4.3) \quad (1+a-c) {}_1F_1[a; c; x] - a {}_1F_1[a+1; c; x] + (c-1) {}_1F_1[a; c-1; x] = 0,$$

we derive following recurrence relations from results of section 5.3 :

$$\begin{aligned} (5.4.4) \quad & {}^{(k)}F_{CD}^{(n)}[a, b, b_1, \dots, b_k; c, c_{k+1}, \dots, c_n; x_1, \dots, x_n] \\ &= {}^{(k)}F_{CD}^{(n)}[a, b, b_1, \dots, b_k; c, c_{k+1}, \dots, c_{k+j-1}, c_{k+j}^{-1}, c_{k+j+1}, \dots, c_n; x_1, \dots, x_n] \\ &- \frac{x_{k+j}}{c_{k+j}(c_{k+j}^{-1})} {}^{(k)}F_{CD}^{(n)}[a, b, b_1, \dots, b_k; c, c_{k+1}, \dots, c_{k+j-1}, c_{k+j}^{+1}, \\ &\quad c_{k+j+1}, \dots, c_n; x_1, \dots, x_n], \end{aligned}$$

where $j = 1, \dots, n-k$.

$$(5.4.5) \quad {}^{(k)}\phi_{(1)CD}^{(n)}[a, b; c, c_{k+1}, \dots, c_n; x_1, \dots, x_n]$$

$$= \frac{(k) \phi^{(n)}_{(1)CD} \left[a, b; c, c_{k+1}, \dots, c_{k+j-1}, c_{k+j}^{-1}, c_{k+j+1}, \dots, c_n; x_1, \dots, x_n \right]}{c_{k+j}^{x_{k+j}} (c_{k+j}^{-1})} \frac{(k) \phi^{(n)}_{(1)CD} \left[a, b; c, c_{k+1}, \dots, c_{k+j-1}, c_{k+j}^{+1}, c_{k+j+1}, \dots, c_n; x_1, \dots, x_n \right]}{c_{k+j}^{x_{k+j}} (c_{k+j}^{-1})},$$

where $j = 1, \dots, n-k$.

$$(5.4.6) \quad \frac{(k) \phi^{(n)}_{(2)CD} \left[a, b_1, \dots, b_k; c, c_{k+1}, \dots, c_n; x_1, \dots, x_n \right]}{(2) \phi^{(n)}_{(2)CD} \left[a, b_1, \dots, b_k; c, c_{k+1}, \dots, c_{k+j-1}, c_{k+j}^{-1}, c_{k+j+1}, \dots, c_n; x_1, \dots, x_n \right]} \\ = \frac{(k) \phi^{(n)}_{(2)CD} \left[a, b_1, \dots, b_k; c, c_{k+1}, \dots, c_{k+j-1}, c_{k+j}^{-1}, c_{k+j+1}, \dots, c_n; x_1, \dots, x_n \right]}{(2) \phi^{(n)}_{(2)CD} \left[a, b_1, \dots, b_k; c, c_{k+1}, \dots, c_{k+j-1}, c_{k+j}^{+1}, c_{k+j+1}, \dots, c_n; x_1, \dots, x_n \right]},$$

where $j = 1, \dots, n-k$.

$$(5.4.7) \quad \frac{(k) \phi^{(n)}_{(3)CD} \left[h, b_1, \dots, b_k; c, c_{k+1}, \dots, c_n; x_1, \dots, x_n \right]}{(3) \phi^{(n)}_{(3)CD} \left[h, b_1, \dots, b_k; c, c_{k+1}, \dots, c_{k+j-1}, c_{k+j}^{-1}, c_{k+j+1}, \dots, c_n; x_1, \dots, x_n \right]} \\ = \frac{(k) \phi^{(n)}_{(3)CD} \left[h, b_1, \dots, b_k; c, c_{k+1}, \dots, c_{k+j-1}, c_{k+j}^{-1}, c_{k+j+1}, \dots, c_n; x_1, \dots, x_n \right]}{(3) \phi^{(n)}_{(3)CD} \left[h, b_1, \dots, b_k; c, c_{k+1}, \dots, c_{k+j-1}, c_{k+j}^{+1}, c_{k+j+1}, \dots, c_n; x_1, \dots, x_n \right]},$$

$j = k+1, \dots, n-k$.

$$(5.4.8) \quad \frac{(k) \phi^{(n)}_{(5)CD} \left[a, b, b_1, \dots, b_k; c_{k+1}, \dots, c_n; x_1, \dots, x_n \right]}{(5) \phi^{(n)}_{(5)CD} \left[a, b, b_1, \dots, b_k; c_{k+1}, \dots, c_n; x_1, \dots, x_n \right]}$$

CHAPTER VI

FRACTIONAL INTEGRATION AND INTEGRAL REPRESENTATIONS
OF KARLSSON'S MULTIPLE HYPERGEOMETRIC FUNCTION AND
CONFLUENT FORMS OF CERTAIN GENERALIZED HYPERGEOMETRIC
FUNCTIONS OF SEVERAL VARIABLES

6.1 Introduction Joshi [6] made use of the theory of fractional integral in order to deduce Eulerian Integral representations of hypergeometric functions of three variables, viz. H_A , H_B and H_C defined and studied by Srivastava (cf [10] to [14] see also [7] and [15]). In subsequent paper, Chandel [1] obtained similar integral representations for the multiple hypergeometric functions $F_A^{(n)}$, $F_B^{(n)}$, $F_C^{(n)}$ and $F_D^{(n)}$ of Lauricella [9] and also for their confluent forms $\Phi_2^{(n)}$ and $\Psi_2^{(n)}$. Further in another paper, Chandel [2] deduced similar integral representations for Exton's multiple hypergeometric functions $(k)_E^{(n)}$, $(1)_D^{(n)}$ and $(k)_E^{(n)}$, $(2)_D^{(n)}$ [5] related to Lauricella's $F_D^{(n)}$ and also for his own introduced multiple hypergeometric functions related to Lauricella $F_A^{(n)}$, $F_B^{(n)}$ and $F_C^{(n)}$ multiple hypergeometric functions

From this chapter a paper entitled "Fractional integration and integral representations of Karlsson's multiple hypergeometric function and its Confluent forms" has been published in JÑĀNĀBHĀ, 20(1990), 101-110.

Recently, Chandel and Gupta [3] have defined and studied multiple hypergeometric functions $(k)_{F(n)}^{AC}$, $(k)_{F(n)}^{AD}$ and $(k)_{F(n)}^{BD}$ related to Lauricella's functions [9]. Motivated by this paper Karlsson [2], also introduced fourth possible Lauricella function $F_{CD}^{(n)}$. Very recently, Chandel and Vishwakarma [4] have studied confluent forms $(k)_{\phi(n)}^{(1)CD}$, $(k)_{\phi(n)}^{(2)CD}$, $(k)_{\phi(n)}^{(3)CD}$, $(k)_{\phi(n)}^{(4)CD}$, $(k)_{\phi(n)}^{(5)CD}$ and $(k)_{\phi(n)}^{(6)CD}$ of Karlsson's $(k)_{F(n)}^{CD}$. Also in previous chapter 'V', we have introduced various confluent forms of certain generalized hypergeometric functions of several variables.

In the present chapter, we shall make use of the theory of fractional integration to derive Eulerian integral representations for multiple hypergeometric function $(k)_{F(n)}^{CD}$ of Karlsson [8] and for various confluent forms of multiple hypergeometric functions of several variables introduced in chapter V.

We recall that the rule for fractional integration by parts is given by

$$(6.1.1) \quad \int_a^b U \frac{\partial^\nu V}{\partial(b-x)^\nu} dx = \int_a^b V \frac{\partial^\nu U}{\partial(x-a)^\nu} dx.$$

If $\operatorname{Re}(\nu) > 0$, the fractional derivatives occurring in (6.1.1) defined by the following integrals :

$$(6.1.2) \quad \frac{\partial^\nu U}{\partial (x-a)^\nu} = \frac{1}{\Gamma(-\nu)} \int_a^x (x-y)^{-\nu-1} U(y) dy ,$$

$$(6.1.3) \quad \frac{\partial^\nu V}{\partial (b-x)^\nu} = \frac{1}{\Gamma(-\nu)} \int_x^b (y-x)^{-\nu-1} V(y) dy .$$

If $\operatorname{Re}(\nu) > 0$ and U, V are expressible in terms of the series

$$U = \sum A_r (x-a)^{r+\nu-1} , \quad V = \sum B_s (b-x)^{s+\nu-1} ,$$

then the fractional derivatives are obtained by differentiating the above series term by term, with the help of the formula

$$(6.1.4) \quad \frac{\partial^\nu W^{\mu-1}}{\partial W^\nu} = \frac{\Gamma(\mu)}{\Gamma(\mu-\nu)} W^{\mu-\nu-1} ,$$

Provided $\mu \neq \nu$.

6.2 THE INTEGRAL REPRESENTATIONS

In this section, we derive the Eulerian integral representations for the functions $(k)_{F(n)}^{(n)}$, $(k)_{(2)CD}^{(n)}$, $(k)_{(3)CD}^{(n)}$,

$$(k)_{(4)CD}^{(n)}, (k)_{(5)CD}^{(n)}, (k)_{(6)CD}^{(n)}, (k)_{(2)AD}^{(n)}, (k)_{(3)BD}^{(n)}, (k)_{(1)D}^{(n)},$$

$$(k)_{(2)D}^{(n)} \text{ and } (k)_{(1)C}^{(n)} .$$

Consider

$$\frac{\partial^{\beta_1-\nu_1+\dots+\beta_k-\nu_k}}{\partial x_1^{\beta_1-\nu_1} \dots \partial x_k^{\beta_k-\nu_k}} \left\{ x_1^{\beta_1-1} \dots x_k^{\beta_k-1} (k)_{F(n)}^{(n)} \right\} \left[\alpha, \nu, \nu_1, \dots, \nu_k; \gamma, \gamma_{k+1}, \dots, \gamma_n; x_1, \dots, x_n \right]$$

$$= \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(\alpha)_{m_1+\dots+m_k} (\nu_1)_{m_1} \dots (\nu_k)_{m_k} (\nu)_{m_{k+1}+\dots+m_n}}{(\gamma)_{m_1+\dots+m_k} (\gamma_{k+1})_{m_{k+1}} \dots (\gamma_n)_{m_n}} \frac{1}{m_1! \dots m_n!}$$

$$\frac{\partial^{\beta_1-\nu_1+\dots+\beta_k-\nu_k}}{\partial x_1^{\beta_1-\nu_1} \dots \partial x_k^{\beta_k-\nu_k}} \left\{ x_1^{\beta_1+m_1-1} \dots x_k^{\beta_k+m_k-1} x_{k+1}^{m_{k+1}} \dots x_n^{m_n} \right\}$$

$$= \prod_{j=1}^k \frac{\Gamma(\beta_j)}{\Gamma(\nu_j)} (x_j)^{\nu_j-1} (k)_{F(n)}^{(n)} \left[\alpha, \nu, \beta_1, \dots, \beta_k; \gamma, \gamma_{k+1}, \dots, \gamma_n; x_1, \dots, x_n \right]$$

Hence by using the relation (6.1.2), we have

$$(k)_{F(n)}^{(n)} \left[\alpha, \nu, \beta_1, \dots, \beta_k; \gamma, \gamma_{k+1}, \dots, \gamma_n; x_1, \dots, x_n \right]$$

$$= \prod_{j=1}^k \frac{\Gamma(\nu_j)}{\Gamma(\beta_j)} x_j^{1-\nu_j} \frac{\partial^{\beta_1-\nu_1+\dots+\beta_k-\nu_k}}{\partial x_1^{\beta_1-\nu_1} \dots \partial x_k^{\beta_k-\nu_k}} \left\{ x_1^{\beta_1-1} \dots x_k^{\beta_k-1} \right\}$$

$$(k)_{F(n)}^{(n)} \left[\alpha, \nu, \beta_1, \dots, \beta_k; \gamma, \gamma_{k+1}, \dots, \gamma_n; x_1, \dots, x_n \right]$$

$$= \prod_{j=1}^k \frac{\Gamma(\nu_j)}{\Gamma(\beta_j)} \frac{(x_j)^{-\nu_j+1}}{\Gamma(\nu_j-\beta_j)} \int_0^{x_1} \dots \int_0^{x_k} (x_1-y_1)^{\nu_1-\beta_1-1} y_1^{\beta_1-1} \dots (x_k-y_k)^{\nu_k-\beta_k-1}$$

$$y_k^{\beta_k-1} (k)_{F(n)}^{(n)} \left[\alpha, \nu, \nu_1, \dots, \nu_k; \gamma, \gamma_{k+1}, \dots, \gamma_n; y_1, \dots, y_k, x_{k+1}, \dots, x_n \right] dy_1 \dots dy_k$$

Now putting every $y_j = x_j t_j$ where $j = 1, \dots, k$

we establish

$$(6.2.1) \quad (k)_{F(n)}^{(n)} \int_{CD} \alpha, \nu, \beta_1, \dots, \beta_k; \gamma, \gamma_{k+1}, \dots, \gamma_n; x_1, \dots, x_n \int$$

$$= \prod_{j=1}^k \frac{\Gamma(\nu_j)}{\Gamma(\beta_j) \Gamma(\nu_j - \beta_j)} \int_0^1 \dots \int_0^1 \prod_{i=1}^k (1-t_i)^{\nu_i - \beta_i - 1} (t_i)^{\beta_i - 1}$$

$$(k)_{F(n)}^{(n)} \int_{CD} \alpha, \nu, \nu_1, \dots, \nu_k; \gamma, \gamma_{k+1}, \dots, \gamma_n; x_1 t_1, \dots, x_k t_k, x_{k+1}, \dots, x_n \int dt_1 \dots dt_k,$$

provided $0 < \operatorname{Re}(\beta_i) < \operatorname{Re}(\nu_i)$, $i = 1, \dots, k$.

For brevity, we use the following operator Ω defined by

Chandel $\int_{1, (2.2)} \int$:

$$(6.2.2) \quad \int_{\substack{\beta_1, \dots, \beta_k \\ \nu_1, \dots, \nu_k}} \Omega$$

$$= \prod_{j=1}^k \frac{\Gamma(\nu_j)}{\Gamma(\beta_j) \Gamma(\nu_j - \beta_j)} \int_0^1 \dots \int_0^1 \prod_{i=1}^k (t_i)^{\beta_i - 1} (1-t_i)^{\nu_i - \beta_i - 1} \left\{ \right\} dt_1 \dots dt_k,$$

where $0 < \operatorname{Re}(\beta_i) < \operatorname{Re}(\nu_i)$, $i = 1, \dots, k$.

Hence the relation (6.2.1) can be written as

$$(6.2.3) \quad \Omega \left\{ (k)_{F(n)}^{(n)} \int_{CD} \alpha, \nu, \nu_1, \dots, \nu_k; \gamma, \gamma_{k+1}, \dots, \gamma_n; x_1 t_1, \dots, x_k t_k, x_{k+1}, \dots, x_n \int \right\}$$

$$= (k)_{F(n)}^{(n)} \int_{CD} \alpha, \nu, \beta_1, \dots, \beta_k; \gamma, \gamma_{k+1}, \dots, \gamma_n; x_1, \dots, x_n \int,$$

provided $0 < \operatorname{Re}(\beta_i) < \operatorname{Re}(\nu_i)$, $i = 1, \dots, k$.

Applying the same techniques, we also obtain the following operational relationships:

$$(6.2.4) \int \left\{ \begin{matrix} (k) \bar{\Phi}^{(n)} \\ (1) I_{CD} \end{matrix} \int \alpha, \nu_1, \dots, \nu_k; \gamma, \gamma_{k+1}, \dots, \gamma_n; x_1 t_1, \dots, x_k t_k, x_{k+1}, \dots, x_n \right\} \\ = \begin{matrix} (k) \bar{\Phi}^{(n)} \\ (2) I_{CD} \end{matrix} \int \alpha, \beta_1, \dots, \beta_k; \gamma, \gamma_{k+1}, \dots, \gamma_n; x_1, \dots, x_n \int ,$$

provided $0 < \operatorname{Re}(\beta_i) < \operatorname{Re}(\nu_i)$, where $i = 1, \dots, k$.

$$(6.2.5) \int \left\{ \begin{matrix} (k) \bar{\Phi}^{(n)} \\ (3) I_{CD} \end{matrix} \int \nu, \nu_1, \dots, \nu_k; \gamma, \gamma_{k+1}, \dots, \gamma_n; x_1 t_1, \dots, x_k t_k, x_{k+1}, \dots, x_n \right\} \\ = \begin{matrix} (k) \bar{\Phi}^{(n)} \\ (3) I_{CD} \end{matrix} \int \nu, \beta_1, \dots, \beta_k; \gamma, \gamma_{k+1}, \dots, \gamma_n; x_1, \dots, x_n \int ,$$

provided $0 < \operatorname{Re}(\beta_i) < \operatorname{Re}(\nu_i)$, where $i = 1, \dots, k$.

$$(6.2.6) \int \left\{ \begin{matrix} (k) \bar{\Phi}^{(n)} \\ (4) I_{CD} \end{matrix} \int \alpha, \nu, \nu_1, \dots, \nu_k; \gamma; x_1 t_1, \dots, x_k t_k, x_{k+1}, \dots, x_n \right\} \\ = \begin{matrix} (k) \bar{\Phi}^{(n)} \\ (4) I_{CD} \end{matrix} \int \alpha, \nu, \beta_1, \dots, \beta_k; \gamma; x_1, \dots, x_n \int ,$$

provided $0 < \operatorname{Re}(\beta_i) < \operatorname{Re}(\nu_i)$, $i = 1, \dots, k$.

$$(6.2.7) \int \left\{ \begin{matrix} (k) F^{(n)} \\ CD \end{matrix} \int \alpha, \nu, \gamma_1, \nu_2, \dots, \nu_k; \beta_1, \gamma_{k+1}, \dots, \gamma_n; x_1 t_1, x_1 t_1 x_2 t_2, \dots, \right. \\ \left. x_1 t_1 x_k t_k, x_{k+1}, \dots, x_n \right\} \\ = \begin{matrix} (k) F^{(n)} \\ CD \end{matrix} \int \alpha, \nu, \gamma_1, \beta_2, \dots, \beta_k; \nu_1, \gamma_{k+1}, \dots, \gamma_n; x_1, x_1 x_2, \dots, x_1 x_k, x_{k+1}, \\ \dots, x_n \int ,$$

provided $0 < \operatorname{Re}(\beta_i) < \operatorname{Re}(\nu_i)$, $i = 1, \dots, k$.

$$(6.2.8) \int \left\{ \begin{matrix} (k) \bar{\Phi}^{(n)} \\ (2) I_{CD} \end{matrix} \int \alpha, \gamma_1, \nu_2, \dots, \nu_k; \beta_1, \gamma_{k+1}, \dots, \gamma_n; x_1 t_1, x_1 t_1 x_2 t_2, \dots, \right. \\ \left. x_1 t_1 x_k t_k, x_{k+1}, \dots, x_n \right\}$$

$$= \frac{(k) \Phi^{(n)}}{(2) I_{CD}} \int \alpha, \gamma_1, \beta_2, \dots, \beta_k; \nu_1, \gamma_{k+1}, \dots, \gamma_n; x_1, x_1 x_1, \dots, x_1 x_k, x_{k+1}, \dots, x_n \int,$$

provided $0 < \operatorname{Re}(\beta_i) < \operatorname{Re}(\nu_i)$, $i = 1, \dots, k$.

$$(6.2.9) \int \left\{ \frac{(k) \Phi^{(n)}}{(3) I_{CD}} \int \nu, \gamma_1, \nu_2, \dots, \nu_k; \beta_1, \gamma_{k+1}, \dots, \gamma_n; x_1 t_1, x_1 t_1 x_2 t_2, \dots, \right. \\ \left. x_1 t_1 x_k t_k, x_{k+1}, \dots, x_n \int \right\}$$

$$= \frac{(k) \Phi^{(n)}}{(3) I_{CD}} \int \nu, \gamma_1, \beta_2, \dots, \beta_k; \nu_1, \gamma_{k+1}, \dots, \gamma_n; x_1, x_1 x_2, \dots, x_1 x_k, x_{k+1}, \dots, x_n \int,$$

provided $0 < \operatorname{Re}(\beta_i) < \operatorname{Re}(\nu_i)$, $i = 1, \dots, k$.

$$(6.2.10) \int \left\{ \frac{(k) \Phi^{(n)}}{(4) I_{CD}} \int \alpha, \nu, \gamma_1, \nu_2, \dots, \nu_k; \beta_1; x_1 t_1, x_1 t_1 x_2 t_2, \dots, x_1 t_1 x_k t_k, \right. \\ \left. x_{k+1}, \dots, x_n \int \right\}$$

$$= \frac{(k) \Phi^{(n)}}{(4) I_{CD}} \int \alpha, \nu, \gamma_1, \beta_2, \dots, \beta_k; \nu_1; x_1, x_1 x_2, \dots, x_1 x_k, x_{k+1}, \dots, x_n \int,$$

provided $0 < \operatorname{Re}(\beta_i) < \operatorname{Re}(\nu_i)$, $i = 1, \dots, k$.

$$(6.2.11) \int \left\{ \frac{(k) \Phi^{(n)}}{(5) I_{CD}} \int a, b, \nu_1, \dots, \nu_k; \beta_{k+1}, \dots, \beta_n; x_1 t_1, \dots, x_n t_n \int \right\}$$

\end{aligned}$$

provided $0 < \operatorname{Re}(\beta_j) < \operatorname{Re}(\nu_j)$, $j=1, \dots, k$ and $i=1, \dots, k$.

6.3 FURTHER EXTENSIONS

In this present section, we derive extensions of the results obtained in the previous section 6.2 to hold for multiple hypergeometric function defined by

$$\begin{aligned}
\tilde{F}(x_1, \dots, x_n) &= F \left[\begin{matrix} 1 \\ 1 \\ k \\ 0 \\ 1 \\ n \end{matrix} \middle| \begin{matrix} \alpha \\ (-; \nu) \\ \lambda_1, \nu_1; \dots; \lambda_k, \nu_k \\ \dots \dots \dots \\ (\gamma; -) \\ \mu_1; \dots; \mu_k; \gamma_{k+1}, \dots, \gamma_n \end{matrix} \middle| x_1, \dots, x_n \right] \\
&= \sum_{m_1, \dots, m_n=0}^{\infty} \frac{(\alpha)_{m_1+\dots+m_n} (\nu)_{m_{k+1}+\dots+m_n} (\nu_1)_{m_1} \dots (\nu_k)_{m_k} (\lambda_1)_{m_1} \dots (\lambda_k)_{m_k}}{(\gamma)_{m_1+\dots+m_k} (\mu_1)_{m_1} \dots (\mu_k)_{m_k} (\gamma_{k+1})_{m_{k+1}} \dots (\gamma_n)_{m_n}} \cdot \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!}.
\end{aligned}$$

From the above definition it follows that

$$\frac{\partial^{\mu_1 - \lambda_1 + \dots + \mu_k - \lambda_k}}{\partial t_1^{\mu_1 - \lambda_1} \dots \partial t_k^{\mu_k - \lambda_k}} \left\{ t_1^{\mu_1 - 1} \dots t_k^{\mu_k - 1} \tilde{F}(x_1 t_1, \dots, x_k t_k, x_{k+1}, \dots, x_n) \right\}$$

$$= \prod_{j=1}^k \frac{\Gamma(\mu_j)}{\Gamma(\lambda_j)} t_j^{\lambda_j - 1} (k)_{F(n)}^{(n)}_{CD} [\alpha, \nu, \nu_1, \dots, \nu_k; \gamma, \gamma_{k+1}, \dots, \gamma_n; x_1 t_1, \dots, x_k t_k, x_{k+1}, \dots, x_n]$$

Using the relation (6.2.3) we have

$$(k)_{F(n)}^{(n)}_{CD} [\alpha, \nu, \beta_1, \dots, \beta_k; \gamma, \gamma_{k+1}, \dots, \gamma_n; x_1, \dots, x_n]$$

$$= \prod_{j=1}^k \frac{\Gamma(\nu_j) \Gamma(\lambda_j)}{\Gamma(\beta_j) \Gamma(\nu_j - \beta_j) \Gamma(\mu_j)} \int_0^1 \dots \int_0^1 \prod_{i=1}^k (t_i)^{\beta_i - \lambda_i} (1 - t_i)^{\nu_i - \beta_i - 1} dt_1 \dots dt_k$$

$$\frac{\partial^{\mu_1 - \lambda_1 + \dots + \mu_k - \lambda_k}}{\partial t_1^{\mu_1 - \lambda_1} \dots \partial t_k^{\mu_k - \lambda_k}} \left\{ t_1^{\mu_1 - 1} \dots t_k^{\mu_k - 1} \tilde{F}(x_1 t_1, \dots, x_k t_k, x_{k+1}, \dots, x_n) \right\} dt_1 \dots dt_k$$

Now making an appeal to the result (6.1.1), we derive

$$(6.3.1) \quad (k)_{F(n)}^{(n)}_{CD} [\alpha, \nu, \beta_1, \dots, \beta_k; \gamma, \gamma_{k+1}, \dots, \gamma_n; x_1, \dots, x_n]$$

$$= \prod_{j=1}^k \frac{\Gamma(\nu_j) \Gamma(\lambda_j)}{\Gamma(\beta_j) \Gamma(\mu_j) \Gamma(\nu_j - \beta_j)} \int_0^1 \dots \int_0^1 t_1^{\mu_1 - 1} \dots t_k^{\mu_k - 1} (k)_{F(n)}^{(n)}_{CD} [x_1 t_1, \dots, x_k t_k, x_{k+1}, \dots, x_n]$$

$$\cdot \frac{\partial^{\mu_1 - \lambda_1 + \dots + \mu_k - \lambda_k}}{\partial (1 - t_1)^{\mu_1 - \lambda_1} \dots \partial (1 - t_k)^{\mu_k - \lambda_k}} \left\{ \prod_{i=1}^k (t_i)^{\beta_i - \lambda_i} (1 - t_i)^{\nu_i - \beta_i - 1} \right\} dt_1 \dots dt_k$$

$$= \prod_{j=1}^k \frac{\Gamma(\nu_j) \Gamma(\lambda_j)}{\Gamma(\beta_j) \Gamma(\mu_j) \Gamma(\nu_j + \lambda_j - \mu_j - \beta_j)} \int_0^1 \cdots \int_0^1 \prod_{i=1}^k (t_i)^{\mu_i-1} (1-t_i)^{\nu_i + \lambda_i - \mu_i - \beta_i - 1}$$

$${}_2F_1 \left[\nu_i - \beta_i, \lambda_i - \beta_i; \nu_i + \lambda_i - \mu_i - \beta_i; 1-t_i \right] \tilde{F}(x_1 t_1, \dots, x_k t_k, x_{k+1}, \dots, x_n) dt_1 \cdots dt_k.$$

Here for brevity, we use the following operator R introduced by Chandel [1, (3.1)] :

$$(6.3.2) \quad R \left\{ \right\} = \prod_{j=1}^k \frac{\Gamma(\nu_j) \Gamma(\lambda_j)}{\Gamma(\beta_j) \Gamma(\mu_j) \Gamma(\nu_j + \lambda_j - \beta_j - \mu_j)} \int_0^1 \cdots \int_0^1 \prod_{i=1}^k (t_i)^{\mu_i-1}.$$

$$(1-t_i)^{\nu_i + \lambda_i - \mu_i - \beta_i - 1} {}_2F_1 \left[\nu_i - \beta_i, \lambda_i - \beta_i; \nu_i + \lambda_i - \mu_i - \beta_i; 1-t_i \right] \left\} \right\} dt_1 \cdots dt_k.$$

and establish the result

$$(6.3.3) \quad R \left\{ F \left[\begin{array}{c|c} 1 & \alpha \\ 1 & (-; \nu) \\ k & \lambda_1, \nu_1; \dots; \lambda_k, \nu_k \\ 0 & \dots \dots \dots x_1 t_1, \dots, x_k t_k, x_{k+1}, \dots, x_n \\ 1 & (\gamma; -) \\ n & \mu_1; \dots; \mu_k; \gamma_{k+1}; \dots; \gamma_n \end{array} \right] \right\}$$

$$= {}^{(k)}F_{CD}^{(n)} \left[\alpha, \nu, \beta_1, \beta_2, \dots, \beta_k; \gamma, \gamma_{k+1}, \dots, \gamma_n; x_1, \dots, x_n \right],$$

provided $0 < \operatorname{Re}(\mu_j) < \operatorname{Re}(\nu_j + \lambda_j - \beta_j)$; $0 < \operatorname{Re}(\beta_j) < \operatorname{Re}(\nu_j)$,

$j = 1, \dots, k$.

[Extension of (6.2.3)]

Applying the same techniques, we obtain the following results :

$$(6.3.4) \quad R \left\{ F \left[\begin{array}{c|c} \begin{matrix} 1 \\ 0 \\ k \\ 0 \\ 1 \\ n \end{matrix} & \begin{matrix} \alpha \\ \dots \dots \dots \\ \lambda_1, \nu_1; \dots; \lambda_k, \nu_k \\ \dots \dots \dots \\ (\gamma; -) \\ \mu_1; \dots; \mu_k; \gamma_{k+1}; \dots; \gamma_n \end{matrix} \end{array} \right] \middle| \begin{matrix} x_1 t_1, \dots, x_k t_k, x_{k+1}, \dots, x_n \end{matrix} \right\}$$

$$= \frac{(k)! I^{(n)}_{CD}}{(2)!} \left[\alpha, \beta_1, \dots, \beta_k; \gamma, \gamma_{k+1}, \dots, \gamma_n; x_1, \dots, x_n \right]$$

valid if $0 < \operatorname{Re}(\beta_j) < \operatorname{Re}(\nu_j)$; $0 < \operatorname{Re}(\mu_j) < \operatorname{Re}(\nu_j + \lambda_j - \beta_j)$, $j=1, \dots, k$.

$$(6.3.5) \quad R \left\{ F \left[\begin{array}{c|c} \begin{matrix} 0 \\ 1 \\ k \\ 0 \\ 1 \\ n \end{matrix} & \begin{matrix} \dots \dots \dots \\ (-; \nu) \\ \lambda_1, \nu_1; \dots; \lambda_k, \nu_k \\ \dots \dots \dots \\ (\gamma; -) \\ \mu_1; \dots; \mu_k; \gamma_{k+1}; \dots; \gamma_n \end{matrix} \end{array} \right] \middle| \begin{matrix} x_1 t_1, \dots, x_k t_k, x_{k+1}, \dots, x_n \end{matrix} \right\}$$

$$= \frac{(k)! I^{(n)}_{CD}}{(3)!} \left[\nu, \beta_1, \dots, \beta_k; \gamma; \gamma_{k+1}, \dots, \gamma_n; x_1, \dots, x_n \right]$$

valid if $0 < \operatorname{Re}(\beta_i) < \operatorname{Re}(\nu_i)$; $0 < \operatorname{Re}(\mu_i) < \operatorname{Re}(\nu_i + \lambda_i - \beta_i)$, $i=1, \dots, k$.

[Extension Of (6.2.5)]

$$(6.3.6) \quad R \left\{ F \left[\begin{array}{c|c} \begin{matrix} 1 \\ 1 \\ k \\ 0 \\ 1 \\ k \end{matrix} & \begin{matrix} \alpha \\ (-; \nu) \\ \lambda_1, \nu_1; \dots; \lambda_k, \nu_k \\ \dots \dots \dots \\ (\gamma; -) \\ \mu_1; \dots; \mu_k \end{matrix} \end{array} \right] \middle| \begin{matrix} x_1 t_1, \dots, x_k t_k, x_{k+1}, \dots, x_n \end{matrix} \right\}$$

$$= \frac{(k)_{\Phi}^{(n)}}{(4)_{CD}} \left[\alpha, \nu, \beta_1, \dots, \beta_k; \gamma; x_1, \dots, x_n \right],$$

valid if $0 < \operatorname{Re}(\mu_i) < \operatorname{Re}(\nu_i + \lambda_i - \beta_i)$; $0 < \operatorname{Re}(\beta_i) < \operatorname{Re}(\nu_i)$, $i=1, \dots, k$.

[Extension of (6.2.6)]

$$(6.3.7) R \left\{ F \left[\begin{array}{c|c} 1 & \alpha \\ 1 & (\lambda_1; \nu) \\ k & \gamma_1; \nu_2, \lambda_2; \dots; \nu_k, \lambda_k \\ 0 & \dots \dots \dots \\ 1 & (\nu_1, \mu_1; -) \\ n-1 & \mu_2; \dots; \mu_k; \gamma_{k+1}; \dots; \gamma_n \end{array} \middle| \begin{array}{c} x_1 t_1, x_1 t_1 x_2 t_2, \dots, x_1 t_1 x_k t_k, \\ x_{k+1}, \dots, x_n \end{array} \right] \right\}$$

$$= \frac{(k)_{\Phi}^{(n)}}{(2)_{CD}} \left[\alpha, \nu, \gamma_1, \beta_2, \dots, \beta_k; \nu_1, \gamma_{k+1}, \dots, \gamma_n; x_1, x_1 x_2, \dots, x_1 x_k, x_{k+1}, \dots, x_n \right],$$

provided $0 < \operatorname{Re}(\mu_j) < \operatorname{Re}(\nu_j + \lambda_j - \beta_j)$; $0 < \operatorname{Re}(\beta_j) < \operatorname{Re}(\nu_j)$, $j=1, \dots, k$.

[Extension of (6.2.7)]

$$(6.3.8) R \left\{ F \left[\begin{array}{c|c} 1 & \alpha \\ 1 & (\lambda_1; -) \\ k & \gamma_1; \nu_2, \lambda_2; \dots; \nu_k, \lambda_k \\ 0 & \dots \dots \dots \\ 1 & (\beta_1, \mu_1; -) \\ n-1 & \mu_2; \dots; \mu_k; \gamma_{k+1}; \dots; \gamma_n \end{array} \middle| \begin{array}{c} x_1 t_1, x_1 t_1 x_2 t_2, \dots, x_1 t_1 x_k t_k, \\ x_{k+1}, \dots, x_n \end{array} \right] \right\}$$

$$= \frac{(k)_{\Phi}^{(n)}}{(2)_{CD}} \left[\alpha, \gamma_1, \beta_2, \dots, \beta_k; \nu_1, \gamma_{k+1}, \dots, \gamma_n; x_1, x_1 x_2, \dots, x_1 x_k, x_{k+1}, \dots, x_n \right],$$

provided $0 < \operatorname{Re}(\mu_j) < \operatorname{Re}(\nu_j + \lambda_j - \beta_j)$; $0 < \operatorname{Re}(\beta_j) < \operatorname{Re}(\nu_j)$, $j=1, \dots, k$.

[Extension of (6.2.8)]

$$(6.3.9) R \left\{ F \left[\begin{array}{c|ccc} 0 & \dots & \dots & \dots \\ 1 & & (\lambda_1, \nu) & \\ k & \gamma_1; \nu_2, \lambda_2; \dots; \nu_k, \lambda_k & & \\ 0 & \dots & \dots & \dots \\ 1 & (\beta_1, \mu_1; -) & & \\ n-1 & \mu_2; \dots; \mu_k; \gamma_{k+1}; \dots; \gamma_n & & \end{array} \right| \begin{array}{l} x_1 t_1, x_1 t_1 x_2 t_2, \dots, x_1 t_1 x_k t_k, \\ x_{k+1}, \dots, x_n \end{array} \right\}$$

$$= \frac{(k)! \Gamma(n)}{(3)!_{CD}} \left[\nu, \gamma_1, \beta_2, \dots, \beta_k; \nu_1, \gamma_{k+1}, \dots, \gamma_n; x_1, x_1 x_2, \dots, x_1 x_k, x_{k+1}, \dots, x_n \right]$$

provided $0 < \operatorname{Re}(\beta_i) < \operatorname{Re}(\nu_i)$; $0 < \operatorname{Re}(\mu_i) < \operatorname{Re}(\nu_i + \lambda_i - \beta_i)$ $i=1, \dots, k$.

[Extension of (6.2.9)]

$$(6.3.10) R \left\{ F \left[\begin{array}{c|ccc} 1 & \alpha & & \\ 1 & (\lambda_1; \nu) & & \\ k & \gamma_1; \nu_2, \lambda_2; \dots; \nu_k, \lambda_k & & \\ 0 & \dots & \dots & \dots \\ 1 & (\beta_1, \mu_1; -) & & \\ k-1 & \mu_2; \dots; \mu_k & & \end{array} \right| \begin{array}{l} x_1 t_1, x_1 t_1 x_2 t_2, \dots, x_1 t_1 x_k t_k, \\ x_{k+1}, \dots, x_n \end{array} \right\}$$

$$= \frac{(k)! \Gamma(n)}{(4)!_{CD}} \left[\alpha, \nu, \gamma_1, \beta_2, \dots, \beta_k; \nu_1; x_1, x_1 x_2, \dots, x_1 x_k, x_{k+1}, \dots, x_n \right]$$

provided $0 < \operatorname{Re}(\beta_j) < \operatorname{Re}(\nu_j)$; $0 < \operatorname{Re}(\mu_j) < \operatorname{Re}(\nu_j + \lambda_j - \beta_j)$, $j=1, \dots, k$.

[Extension of (6.2.10)]

$$(6.3.11) R \left\{ F \left[\begin{array}{c|ccc} 1 & a & & \\ 1 & (-; b) & & \\ n & \lambda_1, \nu_1; \dots; \lambda_k, \nu_k; \lambda_{k+1}; \dots; \lambda_n & & \\ 0 & \dots & \dots & \dots \\ 0 & \dots & \dots & \dots \\ n & \mu_1; \dots; \mu_k; \mu_{k+1}, \beta_{k+1}; \dots; \mu_n, \beta_n & & \end{array} \right| \begin{array}{l} x_1 t_1, \dots, x_n t_n \end{array} \right\}$$

$$= \frac{(k)! \Gamma(n)}{(5)!_{CD}} \left[a, b, \beta_1, \dots, \beta_k; \nu_{k+1}, \dots, \nu_n; x_1, \dots, x_n \right]$$

FRACTIONAL DERIVATIVES OF THE MULTIPLE

HYPERGEOMETRIC FUNCTIONS OF SEVERAL VARIABLES

7.1 Introduction The theory and applications of fractional calculus are based largely upon the familiar differintegral operator ${}_a D_x^\mu$ defined by (cf., e.g. , Oldham and Spanier [15, p. 49] , Lavoie et al. [11] , and Ross [16] ; see also Srivastava and Owa [30], p.356)

$$(7.1.1) \quad {}_a D_x^\mu \{ f(x) \} = \left\{ \frac{1}{\Gamma(-\mu)} \int_a^x (x-t)^{-\mu-1} f(t) dt \quad (\operatorname{Re}(\mu) < 0), \right.$$

$$\left. \frac{d^m}{dx^m} {}_a D_x^{\mu-m} \{ f(x) \} \quad (0 \leq \operatorname{Re}(\mu) < m; m \in \mathbb{N}_0) \right\},$$

where $\mathbb{N}_0 = \{0, 1, 2, \dots\}$

For $a=0$, equation (7.1.1) defines the classical Riemann - Liouville fractional derivative(or integral) of order μ (or $-\mu$). On the other hand when $a \rightarrow \infty$, equation (7.1.1) may be identified with the definition of the familiar Weyl fractional derivative (or integral) of order μ (or $-\mu$) (see for details, Erdélyi et al. [5, chapter 13] and Samko et al. [17]). For the sake of simplicity, the special case of the fractional calculus operator ${}_a D_x^\mu$ when $a=0$ will be written D_x^μ . Thus we have

$$(7.1.2) \quad D_x^\mu = {}_0 D_x^\mu \quad (\mu \in \mathbb{C}) .$$

From this chapter a paper entitled "Fractional derivatives of confluent hypergeometric forms of Karlsson's multiple hypergeometric function" ${}^{(k)}_p F^{(n)}$ has been published in Pure Appl. Math. Sci. , 35(1992), 31 - 39 .

The computation of fractional derivatives (and fractional integrals) of special functions of one and more variables is important from the point of view of the usefulness of these results in (for example) the evaluation of series and integrals (cf. , e.g. , Nishimoto [13] and Srivastava [32]) , the derivation of generating functions (Srivastava and Manocha [28, chapter 5]) , and the solutions of differential and integral equations (cf. Nishimoto [13] , and Srivastava and Buschman [31, chapter 3] ; and see also McBride and Roach [12] , Nishimoto [14] , and Srivastava and Saigo [29]) . Motivated by these and other avenues of applications , a number of workers have made use of the fractional calculus operator D_x^μ in the theory of special functions of one and more variables .

Recently, Srivastava and Goyal [19] , have derived several fractional derivative formulae involving the multivariable H- function defined by Srivastava and Panda [20, p. 271, eq.(4.1) et. seq.] and studied systematically by them (see [21 - 24] ; (see also [19]) . Some obvious special cases of the results of Srivastava and Goyal [19] were proved subsequently by Chouksey and Sharma [4] . Sharma and Singh [33] , on the other ^{hand} , have recently considered some straight forward variations of the results of Srivastava and Goyal [19] .

For special interest, in chapter III we have derived fractional derivatives involving hypergeometric functions of four variables.

In the present chapter, we shall derive fractional derivatives involving generalized multiple hypergeometric function of Srivastava and Daoust [18] specially under those conditions which were restricted by Srivastava and Goyal [27], we shall also discuss their special cases to derive the fractional derivatives involving the multiple hypergeometric functions of several variables defined by Lauricella [10], Exton [6.7], Chandel [1], Chandel - Gupta [2] and Karlsson [9]. we shall also derive the results for confluent forms of the above multiple hypergeometric functions. Finally, we shall also derive multidimensional fractional derivatives involving multiple hypergeometric functions of several variables (see also Chandel and Vishwakarma [3]).

7.2. FRACTIONAL DERIVATIVES

Srivastava and Goyal [27] evaluated

$$D_x^\mu \left\{ x^k (x^\nu + \xi) {}_H [z_1 x^{\rho_1} (x + \xi)^{\sigma_1}, \dots, z_r x^{\rho_r} (x + \xi)^{\sigma_r}] \right\}$$

where ${}_H [z_1, \dots, z_r]$ is multivariable H-function of Srivastava and Panda [20] under certain conditions including $\min(\rho_i, \sigma_i) > 0$, $i = 1, \dots, r$.

Here we shall evaluate

$$D_x^\mu \left\{ x^k (x^\nu + \xi)^\lambda {}_F [z_1 x^{\rho_1} (x^\nu + \xi)^{-\sigma_1}, \dots, z_r x^{\rho_r} (x^\nu + \xi)^{-\sigma_r}] \right\}$$

where $\min(\nu, \rho_i, \sigma_i) > 0$, and ${}_F [z_1, \dots, z_r]$ is generalized hypergeometric function of Srivastava and Daoust [18] defined by

$${}_F [z_1, \dots, z_r] = {}_F \left(\begin{matrix} A: B'; \dots; B^{(r)} \\ C: D'; \dots; D^{(r)} \end{matrix} \left(\begin{matrix} [(a): \theta', \dots, \theta^{(r)}] : [(b'): \Phi']; \dots; \\ [(c): \Psi, \dots, \Psi^{(r)}] : [(d'): \delta']; \dots; \\ [(b^{(r)}): \Phi^{(r)}]; \\ [(d^{(r)}): \delta^{(r)}]; \end{matrix} \right. \right. \left. \left. z_1, \dots, z_r \right) \right.$$

which is absolutely convergent if for all x_i

$$1 + \sum_{j=1}^C \Psi_j^{(i)} + \sum_{j=1}^{D^{(i)}} \delta_j^{(i)} - \sum_{j=1}^A \theta_j^{(i)} - \sum_{j=1}^{B^{(i)}} \Phi_j^{(i)} > 0, \quad i=1, \dots, r.$$

The fundamental difference of both the results is that Srivastava and Goyal [27] have specially taken positive powers of $(x + \xi)$ while here we specially consider negative powers of $(x^\nu + \xi)$ otherwise validity of the results of both works will be destroyed.

our main results are

$$(7.2.1) \quad D_x^\mu \left\{ x^k (x^\nu + \xi)^\lambda \cdot F \left[\begin{matrix} z_1 x^{\rho_1} (x^\nu + \xi)^{-\sigma_1}, \dots, z_r x^{\rho_r} (x^\nu + \xi)^{-\sigma_r} \end{matrix} \right] \right\}$$

$$= \frac{\Gamma(1+k)}{\Gamma(1+k-\mu)} \xi^\lambda x^{k-\mu} F \left[\begin{matrix} A+2:B'; \dots; B^{(r)}, 0 \\ C+2:D'; \dots; D^{(r)}, 0 \end{matrix} \left(\begin{matrix} \left[(a): \theta', \dots, \theta^{(r)}, 0 \right], \\ \left[(c): \Psi', \dots, \Psi^{(r)}, 0 \right] \end{matrix} \right) \right]$$

$$\left[-\lambda: \sigma_1, \dots, \sigma_r, 1 \right], \left[1+k: \rho_1, \dots, \rho_r, \nu \right]; \left[(b'): \Phi' \right]; \dots; \left[(b^{(r)}): \Phi^{(r)} \right]; -;$$

$$\left[-\lambda: \sigma_1, \dots, \sigma_r, 0 \right], \left[1+k-\mu: \rho_1, \dots, \rho_r, \nu \right]; \left[(d'): \delta' \right]; \dots; \left[(d^{(r)}): \delta^{(r)} \right]; -;$$

$\operatorname{Re}(k - \mu) > -1$, $\operatorname{Re}(k' - \mu') > -1$, x, y are independent

$\min(1, 1', \rho_i, \sigma_i, \lambda_i, \nu_i) > 0$ and

$$1 + \sum_{j=1}^C \Psi_j^{(i)} + \sum_{j=1}^{D^{(i)}} \delta_j^{(i)} - \sum_{j=1}^A \theta_j^{(i)} - \sum_{j=1}^{B^{(i)}} \phi_j^{(i)} > 0,$$

$i = 1, \dots, r$.

Proof of (7.2.1) In the left hand side first, we expand multiple hypergeometric function and collect the powers of $(x^\nu + \xi)$, then by

binomial expansion, we collect the powers of x and finally we apply the formula [15, p.67]

$$(7.2.3) \quad D_x^\lambda \{ x^\lambda \} = \frac{\Gamma(\lambda+1)}{\Gamma(\lambda-\mu+1)} x^{\lambda-\mu}, \quad \text{Re}(\lambda) > -1.$$

and rearrange the series to get (7.2.1).

Proof of (7.2.2) Here x and y are independent therefore by making same techniques of (7.2.1) separately w. r. t. x and y , we can derive (7.2.2).

7.3. SPECIAL CASES OF (7.2.1)

Use of one fractional derivative operator. In this section, we derive the following relations as the special cases of (7.2.1):

For $\lambda=0$, $\sigma_1=\dots=\sigma_r=0$, $\nu = \rho_1, \dots, \rho_r = 1$,

replacing μ by $\lambda-\mu$ and k by $\lambda-1$, (7.2.1) reduces to

$$(7.3.1) \quad D_x^{\lambda-\mu} \{ x^{\lambda-1} \cdot F_{\substack{A:B'; \dots; B^{(r)} \\ C:D'; \dots; D^{(r)}}} \left(\begin{array}{l} \Gamma(a):e', \dots, e^{(r)} \Gamma; \Gamma(b'): \Phi' \Gamma; \\ \Gamma(c): \Phi', \dots, \Phi^{(r)} \Gamma; \Gamma(d'): \delta' \Gamma; \\ \dots; \Gamma(b^{(r)}): \Phi^{(r)} \Gamma; \\ \dots; \Gamma(d^{(r)}): \delta^{(r)} \Gamma; \end{array} \right)_{z_1 x, \dots, z_r x}$$

$$= \frac{\Gamma(\lambda) x^{\mu-1}}{\Gamma(\mu)} \cdot F_{\substack{A+1:B'; \dots; B^{(r)} \\ C+1:D'; \dots; D^{(r)}}} \left(\begin{array}{l} \Gamma(a): e' \dots, e^{(r)} \Gamma, \Gamma\lambda: 1, \dots, 1 \Gamma; \\ \Gamma(c): \Phi', \dots, \Phi^{(r)} \Gamma, \Gamma\mu: 1, \dots, 1 \Gamma; \\ \Gamma(b'): \Phi' \Gamma; \dots; \Gamma(b^{(r)}): \Phi^{(r)} \Gamma; \\ \Gamma(d'): \delta' \Gamma; \dots; \Gamma(d^{(r)}): \delta^{(r)} \Gamma; \end{array} \right)_{z_1 x, \dots, z_n x}$$

$\operatorname{Re}(\lambda) > 0$ and series involved is convergent .

$$\begin{aligned}
 (7.3.2) \quad & D_x^{\lambda-\mu} \left\{ x^{\lambda-1} F_A^{(n)} \left[\mu, b_1, \dots, b_n; c_1, \dots, c_n; z_1 x, \dots, z_n x \right] \right\} \\
 &= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} F_A^{(n)} \left[\lambda, b_1, \dots, b_n; c_1, \dots, c_n; z_1 x, \dots, z_n x \right] , \\
 &\operatorname{Re}(\lambda) > 0 , \quad |z_1 x| + \dots + |z_n x| < 1 .
 \end{aligned}$$

$$\begin{aligned}
 (7.3.3) \quad & D_x^{\lambda-\mu} \left\{ x^{\lambda-1} F_B^{(n)} \left[a_1, \dots, a_n, b_1, \dots, b_n; \lambda; z_1 x, \dots, z_n x \right] \right\} \\
 &= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} F_B^{(n)} \left[a_1, \dots, a_n, b_1, \dots, b_n; \mu; z_1 x, \dots, z_n x \right] , \\
 &\operatorname{Re}(\lambda) > 0 , \quad \max(|z_1 x|, \dots, |z_n x|) < 1 .
 \end{aligned}$$

$$\begin{aligned}
 (7.3.4) \quad & D_x^{\lambda-\mu} \left\{ x^{\lambda-1} F_C^{(n)} \left[\mu, b; c_1, \dots, c_n; xz_1, \dots, xz_n \right] \right\} \\
 &= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} F_C^{(n)} \left[\lambda, b; c_1, \dots, c_n; z_1 x, \dots, z_n x \right] , \\
 &\operatorname{Re}(\lambda) > 0 , \quad |z_1 x|^{\frac{1}{2}} + \dots + |z_n x|^{\frac{1}{2}} < 1 .
 \end{aligned}$$

$$\begin{aligned}
 (7.3.5) \quad & D_x^{\lambda-\mu} \left\{ x^{\lambda-1} F_D^{(n)} \left[\mu, b_1, \dots, b_n; c; z_1 x, \dots, z_n x \right] \right\} \\
 &= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} F_D^{(n)} \left[\lambda, b_1, \dots, b_n; c; z_1 x, \dots, z_n x \right] , \\
 &\operatorname{Re}(\lambda) > 0 , \quad \max(|z_1 x|, \dots, |z_n x|) < 1 .
 \end{aligned}$$

Particularly for $c=\mu$, (7.3.5) reduces to the result due to Srivastava and Goyal [27, (7.3.6)] .

$$(7.3.6) \quad D_x^{\lambda-\mu} \left\{ x^{\lambda-1} F_D^{(n)} [a, b_1, \dots, b_n; \lambda; z_1 x, \dots, z_n x] \right\}$$

$$= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} F_D^{(n)} [a, b_1, \dots, b_n; \mu; z_1 x, \dots, z_n x],$$

$$\operatorname{Re}(\lambda) > 0, \quad \max(|z_1 x|, \dots, |z_n x|) < 1.$$

For $a = \lambda$, (7.3.6) reduces to the result due to Srivastava and Goyal [27, (7.3.6)]:

$$(7.3.7) \quad D_x^{\lambda-\mu} \left\{ x^{\lambda-1} \prod_{i=1}^n (1 - z_i x)^{-b_i} \right\} = x^{\mu-1} \frac{\Gamma(\lambda)}{\Gamma(\mu)} F_D^{(n)} [\lambda, b_1, \dots, b_n; z_1 x, \dots, z_n x],$$

$\operatorname{Re}(\lambda) > 0$; $\max\{|z_1 x|, \dots, |z_n x|\} < 1$, which for $n = 2$, was given by earlier by Lavoie et al. [11, p.260].

On the other hand (7.3.5) when $a = \lambda$ or (7.3.6) when $a = \mu$, would similarly yield the following companion of (7.3.7):

$$(7.3.8) \quad D_x^{\lambda-\mu} \left\{ x^{\lambda-1} F_D^{(n)} [\mu, b_1, \dots, b_n; \lambda; z_1 x, \dots, z_n x] \right\}$$

$$= x^{\mu-1} \frac{\Gamma(\lambda)}{\Gamma(\mu)} \prod_{i=1}^n (1 - z_i x)^{-b_i}, \quad \operatorname{Re}(\lambda) > 0,$$

$$\max\{|z_1 x|, \dots, |z_n x|\} < 1,$$

which does not seem to have been recorded earlier.

Here $F_A^{(n)}$, $F_B^{(n)}$, $F_C^{(n)}$ and $F_D^{(n)}$ are Lauricella's multiple hypergeometric function [10].

$$(7.3.9) \quad D_x^{\lambda-\mu} \left\{ x^{\lambda-1} \Phi_2^{(n)} [b_1, \dots, b_n; \lambda; z_1 x, \dots, z_n x] \right\}$$

$$= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} \Phi_2^{(n)} [b_1, \dots, b_n; \mu; z_1 x, \dots, z_n x], \quad \operatorname{Re}(\lambda) > 0.$$

$$\begin{aligned}
 (7.3.10) \quad & D_x^{\lambda-\mu} \left\{ x^{\lambda-1} \Phi_2^{(n)} \left[\mu; c_1, \dots, c_n; z_1 x, \dots, z_n x \right] \right\} \\
 &= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} \Phi_2^{(n)} \left[\lambda; c_1, \dots, c_n; z_1 x, \dots, z_n x \right], \operatorname{Re}(\lambda) > 0.
 \end{aligned}$$

$$\begin{aligned}
 (7.3.11) \quad & D_x^{\lambda-\mu} \left\{ x^{\lambda-1} \Phi_D^{(n)} \left[\mu, b_1, \dots, b_{n-1}; c; z_1 x, \dots, z_n x \right] \right\} \\
 &= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} \Phi_D^{(n)} \left[\lambda, b_1, \dots, b_{n-1}; c; z_1 x, \dots, z_n x \right], \operatorname{Re}(\lambda) > 0
 \end{aligned}$$

$$\begin{aligned}
 (7.3.12) \quad & D_x^{\lambda-\mu} \left\{ x^{\lambda-1} \Xi_1^{(n)} \left[a_1, \dots, a_n, b_1, \dots, b_{n-1}; \lambda; z_1 x, \dots, z_n x \right] \right\} \\
 &= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} \Xi_1^{(n)} \left[a_1, \dots, a_n, b_1, \dots, b_{n-1}; \mu; z_1 x, \dots, z_n x \right],
 \end{aligned}$$

$\operatorname{Re}(\lambda) > 0$.

$$\begin{aligned}
 (7.3.13) \quad & D_x^{\lambda-\mu} \left\{ x^{\lambda-1} \Phi_3^{(n)} \left[b_1, \dots, b_{n-1}; \lambda; z_1 x, \dots, z_n x \right] \right\} \\
 &= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} \Phi_3^{(n)} \left[b_1, \dots, b_{n-1}; \mu; z_1 x, \dots, z_n x \right], \operatorname{Re}(\lambda) > 0.
 \end{aligned}$$

where $\Phi_2^{(n)}$, $\Phi_D^{(n)}$, $\Xi_1^{(n)}$ and $\Phi_3^{(n)}$ are confluent

forms of Lauricella's multiple hypergeometric functions [10].

$$\begin{aligned}
 (7.3.14) \quad & D_x^{\lambda-\mu} \left\{ x^{\lambda-1} {}_{(1)D}^{(k)} E^{(n)} \left[\mu, b_1, \dots, b_n; c, c'; z_1 x, \dots, z_n x \right] \right\} \\
 &= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} {}_{(1)D}^{(k)} E^{(n)} \left[\lambda, b_1, \dots, b_n; c, c'; z_1 x, \dots, z_n x \right], \operatorname{Re}(\lambda) > 0 \\
 &\quad r_1 = \dots = r_k, \quad r_{k+1} = \dots = r_n, \quad r_k + r_n = 1, \quad \text{where } |z_i x| < r_i, \quad i=1, \dots, n.
 \end{aligned}$$

$$(7.3.15) \quad D_x^{\lambda-\mu} \left\{ x^{\lambda-1} {}_{(2)D}^{(k)} G^{(n)} \left[a, a', b_1, \dots, b_n; \lambda; z_1 x, \dots, z_n x \right] \right\}$$

$$= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} \frac{(k)E^{(n)}_{(2)D}}{\Gamma(a, a', b_1, \dots, b_n; \mu; z_1 x, \dots, z_n x)} ,$$

$$\operatorname{Re}(\lambda) > 0, \quad r_1 = \dots = r_k, \quad r_{k+1} = \dots = r_n, \quad r_k \cdot r_n = r_k + r_n,$$

$$|z_i x| < r_i, \quad i=1, \dots, n.$$

$$(7.3.16) \quad D_x^{\lambda-\mu} \left\{ x^{\lambda-1} \frac{(k)E^{(n)}_{(1)C}}{\Gamma(a, a', \mu; c_1, \dots, c_n; z_1 x, \dots, z_n x)} \right\}$$

$$= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} \frac{(k)E^{(n)}_{(1)C}}{\Gamma(a, a', \lambda; c_1, \dots, c_n; z_1 x, \dots, z_n x)},$$

$$\operatorname{Re}(\lambda) > 0, \quad (\sqrt{r_1} + \dots + \sqrt{r_k})^2 + (\sqrt{r_{k+1}} + \dots + \sqrt{r_n})^2 = 1,$$

$$|z_i x| < r_i, \quad i=1, \dots, n.$$

Here $\frac{(k)E^{(n)}_{(1)D}}$ and $\frac{(k)E^{(n)}_{(2)D}}$ are Exton's multiple hypergeometric functions $\Gamma_{6,7}$ related to Lauricella's $F^{(n)}_D$, while $\frac{(k)E^{(n)}_{(1)C}}$ is Chandel's multiple hypergeometric function Γ_1 related to Lauricella's $F^{(n)}_C$.

$$(7.3.17) \quad D_x^{\lambda-\mu} \left\{ x^{\lambda-1} \frac{(k)F^{(n)}_{AC}}{\Gamma(\mu, b, b_{k+1}, \dots, b_n; c_1, \dots, c_n; z_1 x, \dots, z_n x)} \right\}$$

$$= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} \frac{(k)F^{(n)}_{AC}}{\Gamma(\lambda, b, b_{k+1}, \dots, b_n; c_1, \dots, c_n; z_1 x, \dots, z_n x)},$$

$$\operatorname{Re}(\lambda) > 0, \quad (|z_1 x|^{\frac{1}{2}} + \dots + |z_k x|^{\frac{1}{2}})^2 + |z_{k+1} x| + \dots + |z_n x| < 1,$$

$$(7.3.18) \quad D_x^{\lambda-\mu} \left\{ x^{\lambda-1} \frac{(k)F^{(n)}_{BD}}{\Gamma(a, a_{k+1}, \dots, a_n, b_1, \dots, b_n; \lambda; z_1 x, \dots, z_n x)} \right\}$$

$$= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} \frac{(k)F^{(n)}_{BD}}{\Gamma(a, a_{k+1}, \dots, a_n, b_1, \dots, b_n; \mu; z_1 x, \dots, z_n x)}, \quad \operatorname{Re}(\lambda) > 0.$$

$$\max(|z_1 x|, \dots, |z_n x|) < 1.$$

while $(k)\phi^{(n)}_{(1)AC}$, $(k)\phi^{(n)}_{(2)AC}$, $(k)\phi^{(n)}_{(1)AD}$, $(k)\phi^{(n)}_{(1)BD}$, $(k)\phi^{(n)}_{(2)BD}$ are

their confluent forms introduced by Chandel and Gupta [2].

$$(7.3.25) \quad D_x^{\lambda-\mu} \left\{ x^{\lambda-1} \frac{(k)E^{(n)}_{(1)D} [a, b_1, \dots, b_n; \lambda, c'; z_1 x, \dots, z_k x, z_{k+1}, \dots, z_n]}{(1)D} \right\}$$

$$= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} \frac{(k) \Phi^{(n)}(z)}{(3) \mathbb{I}_{BD}} \left[\lambda, a_{k+1}, \dots, a_n, b_1, \dots, b_k; c; z_1 x, \dots, z_k x, z_{k+1}, \dots, z_n \right],$$

$$\operatorname{Re}(\lambda) > 0.$$

$$(7.3.56) \quad D_x^{\lambda-\mu} \left\{ x^{\lambda-1} \frac{(k) \Phi^{(n)}(z)}{(3) \mathbb{I}_{BD}} \left[a, a_{k+1}, \dots, a_n, b_1, \dots, b_k; \lambda; z_1 x, \dots, z_n x \right] \right\}$$

$$= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} \frac{(k) \Phi^{(n)}(z)}{(3) \mathbb{I}_{BD}} \left[a, a_{k+1}, \dots, a_n, b_1, \dots, b_k; \mu; z_1 x, \dots, z_n x \right], \operatorname{Re}(\lambda) > 0.$$

$$(7.3.57) \quad D_x^{\lambda-\mu} \left\{ x^{\lambda-1} \frac{(k) \Phi^{(n)}(z)}{(1) \mathbb{I}_D} \left[\mu, b_1, \dots, b_n; c; z_1 x, \dots, z_n x \right] \right\}$$

$$= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} \frac{(k) \Phi^{(n)}(z)}{(1) \mathbb{I}_D} \left[\lambda, b_1, \dots, b_n; c; z_1 x, \dots, z_n x \right], \operatorname{Re}(\lambda) > 0.$$

$$(7.3.58) \quad D_x^{\lambda-\mu} \left\{ x^{\lambda-1} \frac{(k) \Phi^{(n)}(z)}{(1) \mathbb{I}_D} \left[a, b_1, \dots, b_n; \lambda; z_1 x, \dots, z_n x \right] \right\}$$

$$= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} \frac{(k) \Phi^{(n)}(z)}{(1) \mathbb{I}_D} \left[a, b_1, \dots, b_n; \mu; z_1 x, \dots, z_k x, z_{k+1}, \dots, z_n \right], \operatorname{Re}(\lambda) > 0$$

$$(7.3.59) \quad D_x^{\lambda-\mu} \left\{ x^{\lambda-1} \frac{(k) \Phi^{(n)}(z)}{(2) \mathbb{I}_D} \left[\mu, b_1, \dots, b_n; c; z_1 x, \dots, z_k x, z_{k+1}, \dots, z_n \right] \right\}$$

$$= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} \frac{(k) \Phi^{(n)}(z)}{(2) \mathbb{I}_D} \left[\lambda, b_1, \dots, b_n; c; z_1 x, \dots, z_k x, z_{k+1}, \dots, z_n \right], \operatorname{Re}(\lambda) > 0$$

$$(7.3.60) \quad D_x^{\lambda-\mu} \left\{ x^{\lambda-1} \frac{(k) \Phi^{(n)}(z)}{(2) \mathbb{I}_D} \left[a, b_1, \dots, b_n; \lambda; z_1 x, \dots, z_n x \right] \right\}$$

$$= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} \frac{(k) \Phi^{(n)}(z)}{(2) \mathbb{I}_D} \left[a, b_1, \dots, b_n; \mu; z_1 x, \dots, z_n x \right], \operatorname{Re}(\lambda) > 0.$$

$$(7.3.61) \quad D_x^{\lambda-\mu} \left\{ x^{\lambda-1} \frac{(k)\Phi^{(n)}(z)}{(1)\Gamma_C} \left[\mu, b; c_1, \dots, c_n; z_1^x, \dots, z_k^x, z_{k+1}, \dots, z_n \right] \right\}$$

$$= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} \frac{(k)\Phi^{(n)}(z)}{(1)\Gamma_C} \left[\lambda, b; c_1, \dots, c_n; z_1^x, \dots, z_k^x, z_{k+1}, \dots, z_n \right], \operatorname{Re}(\lambda) > 0.$$

$$(7.3.62) \quad D_x^{\lambda-\mu} \left\{ x^{\lambda-1} \frac{(k)\Phi^{(n)}(z)}{(1)\Gamma_C} \left[a, \mu; c_1, \dots, c_n; z_1^x, \dots, z_n^x \right] \right\},$$

$$= \frac{\Gamma(\lambda)}{\Gamma(\mu)} x^{\mu-1} \frac{(k)\Phi^{(n)}(z)}{(1)\Gamma_C} \left[a, \lambda; c_1, \dots, c_n; z_1^x, \dots, z_n^x \right], \operatorname{Re}(\lambda) > 0.$$

Here $\frac{(k)\Phi^{(n)}(z)}{(2)\Gamma_{AD}}$ and $\frac{(k)\Phi^{(n)}(z)}{(3)\Gamma_{BD}}$ are confluent forms of Lauricella intermediate functions $\frac{(k)F^{(n)}(z)}{AD}$ and $\frac{(k)F^{(n)}(z)}{BD}$ of Chandel and Gupta [2] while $\frac{(k)\Phi^{(n)}(z)}{(1)\Gamma_D}$, $\frac{(k)\Phi^{(n)}(z)}{(2)\Gamma_D}$ are new confluent forms of Exton's multiple hypergeometric functions $\frac{(k)E^{(n)}(z)}{(1)D}$, $\frac{(k)E^{(n)}(z)}{(2)D}$ [6,7] and $\frac{(k)\Phi^{(n)}(z)}{(1)\Gamma_C}$ is confluent forms of Chandel's $\frac{(k)E^{(n)}(z)}{(1)C}$. These are all new confluent multiple hypergeometric functions, introduced in chapter V.

7.4. SPECIAL CASES OF (7.2.2)

Use of two fractional derivative operators. Specializing the parameters in (7.2.2), we obtain the following results:

$$(7.4.1) \quad D_x^{\lambda-\mu} D_y^{\lambda'-\mu'} \left\{ x^{\lambda-1} y^{\lambda'-1} \frac{(k)F^{(n)}(z)}{AC} \left[\mu, \mu'; b_{k+1}, \dots, b_n; c_1, \dots, c_n; z_1^{xy}, \right. \right.$$

$$\left. \left. z_k^{xy}, z_{k+1}^x, \dots, z_n^x \right] \right\}$$

$$= \frac{\Gamma(\lambda) \Gamma(\lambda')}{\Gamma(\mu) \Gamma(\mu')} x^{\mu-1} y^{\mu'-1} (k)_{F(n)} \int_{AC} \lambda, \lambda', b_{k+1}, \dots, b_n; c_1, \dots, c_n; z_1 xy, \dots, z_k xy, \\ z_{k+1}^x, \dots, z_n^x \rceil,$$

$$\operatorname{Re}(\lambda) > 0, \operatorname{Re}(\lambda') > 0, (|z_1 xy|^{\frac{1}{2}} + \dots + |z_k xy|^{\frac{1}{2}})^2 + |z_{k+1}^x| + \dots + |z_n^x| < 1.$$

$$(7.4.2) \quad D_x^{\lambda-\mu} D_y^{\lambda'-\mu'} \{ x^{\lambda-1} y^{\lambda'-1} (k)_{F(n)} \int_{AD} \mu, b_1, \dots, b_n; \lambda', c_{k+1}, \dots, c_n; z_1 xy, \\ \dots, z_k xy, z_{k+1}^x, \dots, z_n^x \rceil \}$$

$$= \frac{\Gamma(\lambda) \Gamma(\lambda')}{\Gamma(\mu) \Gamma(\mu')} x^{\mu-1} y^{\mu'-1} (k)_{F(n)} \int_{AD} \lambda, b_1, \dots, b_n; \mu', c_{k+1}, \dots, c_n; z_1 xy, \dots, z_k xy, \\ z_{k+1}^x, \dots, z_n^x \rceil,$$

$$\operatorname{Re}(\lambda) > 0, \operatorname{Re}(\lambda') > 0, \max(|z_1 xy|, \dots, |z_k xy| \cdot |z_{k+1}^x|, \dots, |z_n^x|) < 1.$$

$$(7.4.3) \quad D_x^{\lambda-\mu} D_y^{\lambda'-\mu'} \{ x^{\lambda-1} y^{\lambda'-1} (k)_{F(n)} \int_{BD} \mu', a_{k+1}, \dots, a_n, b_1, \dots, b_n; \lambda; \\ z_1 xy, \dots, z_k xy, z_{k+1}^x, \dots, z_n^x \rceil \}$$

$$= \frac{\Gamma(\lambda) \Gamma(\lambda')}{\Gamma(\mu) \Gamma(\mu')} x^{\mu-1} y^{\mu'-1} (k)_{F(n)} \int_{BD} \lambda', a_{k+1}, \dots, a_n, b_1, \dots, b_n; \mu; z_1 xy, \dots, z_k xy, \\ z_{k+1}^x, \dots, z_n^x \rceil,$$

$$\operatorname{Re}(\lambda) > 0, \operatorname{Re}(\lambda') > 0, \max(|z_1 xy|, \dots, |z_k xy|, |z_{k+1}^x| \dots |z_n^x|) < 1.$$

7.6 MULTIDIMENSIONAL FRACTIONAL DERIVATIVES

In this section, we derive the following multidimensional fractional derivatives involving the above multiple hypergeometric functions :

$$(7.6.1) \quad D_{x_1}^{\lambda_1 - \mu_1} \dots D_{x_n}^{\lambda_n - \mu_n} \left\{ \prod_{j=1}^n x_j^{\lambda_j - 1} F_A^{(n)}[a, \mu_1, \dots, \mu_n; c_1, \dots, c_n; z_1 x_1, \dots, z_n x_n] \right\}$$

$$= \prod_{j=1}^n \frac{\Gamma(\lambda_j)}{\Gamma(\mu_j)} x_j^{\mu_j - 1} F_A^{(n)}[a, \lambda_1, \dots, \lambda_n; c_1, \dots, c_n; z_1 x_1, \dots, z_n x_n],$$

$$\operatorname{Re}(\lambda_i) > 0, \quad i=1, \dots, n, \quad |z_1 x_1| + \dots + |z_n x_n| < 1.$$

$$(7.6.2) \quad D_{x_1}^{\lambda_1 - \mu_1} \dots D_{x_n}^{\lambda_n - \mu_n} \left\{ \prod_{j=1}^n x_j^{\lambda_j - 1} \right.$$

$$\left. F_A^{(n)}[a, b_1, \dots, b_n; \lambda_1, \dots, \lambda_n; z_1 x_1, \dots, z_n x_n] \right\}$$

$$= \prod_{j=1}^n \frac{\Gamma(\lambda_j)}{\Gamma(\mu_j)} x_j^{\mu_j - 1} F_A^{(n)}[a, b_1, \dots, b_n; \mu_1, \dots, \mu_n; z_1 x_1, \dots, z_n x_n],$$

$$|z_1 x_1| + \dots + |z_n x_n| < 1, \quad \operatorname{Re}(\lambda_j) > 0, \quad i=1, \dots, n.$$

$$(7.6.3) \quad D_{x_1}^{\lambda_1 - \mu_1} \dots D_{x_n}^{\lambda_n - \mu_n} \left\{ \prod_{j=1}^n x_j^{\lambda_j - 1} \right\}.$$

$$F_B^{(n)} \left[\mu_1, \dots, \mu_n, b_1, \dots, b_n; c; z_1 x_1, \dots, z_n x_n \right]$$

$$= \prod_{j=1}^n \frac{\Gamma(\lambda_j)}{\Gamma(\mu_j)} x_j^{\mu_j - 1} F_B^{(n)} \left[\lambda_1, \dots, \lambda_n; b_1, \dots, b_n; c; z_1 x_1, \dots, z_n x_n \right],$$

$$\max \{ |z_1 x_1|, \dots, |z_n x_n| \} < 1, \quad \operatorname{Re}(\lambda_j) > 0, \quad j=1, \dots, n.$$

$$(7.6.4) \quad D_{x_1}^{\lambda_1 - \mu_1} \dots D_{x_n}^{\lambda_n - \mu_n} \left\{ \prod_{j=1}^n x_j^{\lambda_j - 1} F_B^{(n)} \left[a_1, \dots, a_n, \mu_1, \dots, \mu_n; c; z_1 x_1, \dots, z_n x_n \right] \right\}$$

$$= \prod_{j=1}^n \frac{\Gamma(\lambda_j)}{\Gamma(\mu_j)} x_j^{\mu_j - 1} F_B^{(n)} \left[a_1, \dots, a_n, \lambda_1, \dots, \lambda_n; c; z_1 x_1, \dots, z_n x_n \right],$$

*
*APPLICATIONS OF MULTIPLE HYPERGEOMETRIC FUNCTION
OF SRIVASTAVA AND DAOUST IN STATISTICS8.1 Introduction Different distributions have

been discussed by various authors Block and Rao [1], Carlsson [2], Daley [4], Datt [5], Kabe [7], Kaufman, Mathai and Saxena [8], Kendall [9], Khatri and Pillai [10,11], Khatri and Srivastava [12], Littler and Fackere [14], Lukacs and Naha [15], Lukacs [16], Mathai ([17] to [28]) Mathai and Rathie ([29] to [34]), Mathai and Saxena ([35] to [41]), Miller [42], Pillai, Al-Ani and Jouris [43], Pillai and Jouris [44], Pillai and Nagarsenker [45], Robbins and Pitman [46], Strawderman [51], Thaung [52] and Wilks [53]. Srivastava and Singhal [49] studied many of the classical statistical distributions, which were associated with the beta and gamma distributions. Further Exton [6] discussed generalized beta and gamma distributions with other special multivariate distributions like Dirichlet distributions and multivariate normal distributions.

He also discussed the expectations of some functions involving Lauricella's multiple hypergeometric functions [13].

In the present chapter, we extend the above work and establish some probability density functions associated with the multivariate beta and gamma distributions and make their applications to obtain some expectations involving the most generalized multiple hypergeometric function of Srivastava and Daoust [47] (see also Srivastava and Manocha [50], p.64). Finally, we also derive the moments for these multivariate beta and gamma distributions and discuss their special cases.

8.2 FORMULAE REQUIRED

For ready stock, in this section, we write the following results which will be used in our investigations:

The Liouville's theorem (Also see Chandel [3, p.83(3.1)])

$$(8.2.1) \quad \int_0^\infty \dots \int_0^\infty f(x_1 + \dots + x_n) x_1^{\mu_1 - 1} \dots x_n^{\mu_n - 1} dx_1 \dots dx_n \\ = \frac{\Gamma(\mu_1) \dots \Gamma(\mu_n)}{\Gamma(\mu_1 + \dots + \mu_n)} \int_0^\infty f(t) t^{\mu_1 + \dots + \mu_n - 1} dt,$$

provided that $(x_1 + \dots + x_n) \geq 0$, for all positive values of x_1, \dots, x_n .

Euler's definition for gamma function

$$(8.2.2) \quad \Gamma(z) = \int_0^{\infty} t^{z-1} e^{-t} dt, \quad \text{Re}(z) > 0.$$

The definition of beta function (see, Srivastava and Manocha [50, p.26 eq. (46)])

$$(8.2.3) \quad B(\alpha, \beta) = \int_0^{\infty} \frac{u^{\alpha-1}}{(1+u)^{\alpha+\beta}} du, \quad \text{Re}(\alpha) > 0, \quad \text{Re}(\beta) > 0.$$

8.3 Multivariate Gamma Distribution

Consider the function

$$(8.3.1) \quad f(x_1, \dots, x_n) = \frac{\Gamma(\mu_1 + \dots + \mu_n) \lambda^{\mu_1 + \dots + \mu_n}}{\Gamma(\mu_1) \dots \Gamma(\mu_n) \Gamma(\mu_1 + \dots + \mu_n)} e^{-(x_1 + \dots + x_n)\lambda} \\ (x_1 + \dots + x_n)^{\mu} x_1^{\mu_1-1} \dots x_n^{\mu_n-1},$$

provided that $\text{Re}(\lambda) > 0$, $(x_1 + \dots + x_n) \geq 0$, $x_i \geq 0$,

$\text{Re}(\mu_i) > 0$, $i = 1, \dots, n$, and $f(x_1, \dots, x_n) = 0$ else where.

Making an appeal to (8.2.1) and (8.2.2), the value of multiple integral of $f(x_1, \dots, x_n)$ over the region defined above in (8.3.1) becomes unity. Hence $f(x_1, \dots, x_n)$ is a probability density function for multivariate gamma distribution.

8.4 Expectation Associated with Multivariate Gamma Distribution

The expectation value of the function $g(x_1, \dots, x_n)$

is defined as

$$(8.4.1) \quad \langle g(x_1, \dots, x_n) \rangle = \int_{-\infty}^{\infty} \dots \int_{-\infty}^{\infty} g(x_1, \dots, x_n) f(x_1, \dots, x_n) dx_1 \dots dx_n.$$

Corresponding to density function $f(x_1, \dots, x_n)$ defined by

(8.3.1), consider the function

$$(8.4.2) \quad g_1(x_1, \dots, x_n) = F_{A:B'; \dots; B^{(n)}; C:D'; \dots; D^{(n)}} \left(\begin{matrix} \angle(a): \theta', \dots, \theta^{(n)}; \\ \angle(c): \phi, \dots, \phi^{(n)}; \end{matrix} \right.$$

$$\left. \begin{matrix} \angle(b'): \xi', \dots; \angle(b^{(n)}): \xi^{(n)}; \\ \angle(d'): \delta', \dots; \angle(d^{(n)}): \delta^{(n)}; \end{matrix} \right) z_1(x_1 + \dots + x_n)^{\nu_1}, \dots, z_n(x_1 + \dots + x_n)^{\nu_n}$$

where $F_{A:B'; \dots; B^{(n)}; C:D'; \dots; D^{(n)}}$ is most generalized multiple hypergeometric

function of Srivastava and Daoust [41] (Also see Srivastava and Manocha [50, (18), (19), (20), p.64]) .

Now making an appeal to (8.2.1) and (8.2.2), the expectation of $g_1(x_1, \dots, x_n)$ having density function $f(x_1, \dots, x_n)$ is given by

$$(8.4.3) \quad \langle g_1(x_1, \dots, x_n) \rangle = F \begin{pmatrix} A+1 : B'; \dots; B^{(n)} \\ C : D' ; \dots; D^{(n)} \end{pmatrix} \begin{pmatrix} \Gamma(a): \theta', \dots, \theta^{(n)} \\ \Gamma(c): \phi', \dots, \phi^{(n)} \end{pmatrix} ;$$

$$\Gamma(\rho + \rho_1 + \dots + \rho_n : \nu_1, \dots, \nu_n) ; \Gamma(b') : \phi' ; \dots ; \Gamma(b^{(n)}) : \phi^{(n)} ;$$

$$\Gamma(d') : \delta' ; \dots ; \Gamma(d^{(n)}) : \delta^{(n)} ; \left(\frac{z_1}{\lambda_1^{\nu_1}}, \dots, \frac{z_n}{\lambda_n^{\nu_n}} \right)$$

provided that

$$1 + \sum_{j=1}^C \phi_j^{(i)} + \sum_{j=1}^{D^{(i)}} \delta_j^{(i)} - \sum_{j=1}^A \theta_j^{(i)} - \sum_{j=1}^{B^{(i)}} \phi_j^{(i)} - \nu_i > 0,$$

$i=1, \dots, n$.

Corresponding to density function $f(x_1, \dots, x_n)$ defined by (8.3.1),

if we consider the function

$$(8.4.4) \quad g_2(x_1, \dots, x_n) = F^{A:B'; \dots; B^{(n)}; C:D'; \dots; D^{(n)}} \left(\begin{array}{l} \lceil (a): \theta', \dots, \theta^{(n)} \rceil; \\ \lceil (c): \phi', \dots, \phi^{(n)} \rceil; \end{array} \right)$$

$$\lceil (b'): \Phi' \rceil; \dots; \lceil (b^{(n)}): \Phi^{(n)} \rceil; \quad z_1^{\alpha_1} x_1^{\nu_1} (x_1 + \dots + x_n)^{\nu_1}, \dots, z_n^{\alpha_n} x_n^{\nu_n} (x_1 + \dots + x_n)^{\nu_n}$$

$$\lceil (d'): \delta' \rceil; \dots; \lceil (d^{(n)}): \delta^{(n)} \rceil;$$

Then the expectation of g_2 is given by

$$(8.4.5) \quad \langle g_2(x_1, \dots, x_n) \rangle = F^{A+1:B'+1; \dots; B^{(n)}+1; C+1:D'+1; \dots; D^{(n)}+1} \left(\begin{array}{l} \lceil (a): \theta', \dots, \theta^{(n)} \rceil; \\ \lceil (c): \phi', \dots, \phi^{(n)} \rceil; \end{array} \right)$$

$$\lceil \mu + \mu_1 + \dots + \mu_n; \alpha_1 + \nu_1, \dots, \alpha_n + \nu_n \rceil; \lceil (b'): \Phi' \rceil, \lceil \mu_1: \alpha_1 \rceil; \dots;$$

$$\lceil \mu_1 + \dots + \mu_n; \alpha_1 + \dots + \alpha_n \rceil; \lceil (d'): \delta' \rceil; \dots;$$

$$\lceil (b^{(n)}): \Phi^{(n)} \rceil, \lceil (\mu_n): \alpha_n \rceil; \quad \frac{z_1}{\lambda^{\alpha_1 + \nu_1}}, \dots, \frac{z_n}{\lambda^{\alpha_n + \nu_n}}$$

$$\lceil (d^{(n)}): \delta^{(n)} \rceil;$$

valid if

$$1 + \sum_{j=1}^C \alpha_j^{(i)} + \sum_{j=1}^{D(i)} \delta_j^{(i)} - \sum_{j=1}^A \theta_j^{(i)} - \sum_{j=1}^{B(i)} \eta_j^{(i)} - \nu_i - \alpha_i > 0 ,$$

$i=1, \dots, n$.

8.5 The Multivariate Beta Distribution

Consider the function $F(x_1, \dots, x_n)$ defined by

$$(8.5.1) \quad F(x_1, \dots, x_n) = \frac{\Gamma(\mu_1 + \dots + \mu_n) \Gamma(\alpha + \lambda + \mu_1 + \dots + \mu_n) (x_1 + \dots + x_n)^\alpha}{\Gamma(\mu_1) \dots \Gamma(\mu_n) \Gamma(\lambda) \Gamma(\alpha + \mu_1 + \dots + \mu_n) (1 + x_1 + \dots + x_n)^{\alpha + \lambda + \mu_1 + \dots + \mu_n}} \cdot x_1^{\mu_1 - 1} \dots x_n^{\mu_n - 1} ,$$

$\text{Re}(\alpha) > 0$, $\text{Re}(\mu_i) > 0$, $x_i > 0$, $i=1, \dots, n$ and $F(x_1, \dots, x_n) = 0$

else where .

Now making an appeal to (8.2.1) and (8.2.3), the value of multiple integral of $F(x_1, \dots, x_n)$ over the region defined above in (8.5.1), becomes unity . Hence $F(x_1, \dots, x_n)$ is probability density function for multivariate beta distribution .

8.6 Expectation Associated with Multivariate
Beta Distribution

Corresponding to density function $F(x_1, \dots, x_n)$ defined by (8.5.1)

Consider the function

$$(8.6.1) \quad G_1(x_1, \dots, x_n) = F \left(\begin{array}{l} A:B'; \dots; B^{(n)} \\ C:D'; \dots; D^{(n)} \end{array} \left(\begin{array}{l} \lceil (a): \theta', \dots, \theta^{(n)} \rceil; \\ \lceil (c): \phi', \dots, \phi^{(n)} \rceil; \\ \lceil (b'): \psi' \rceil; \dots; \lceil (b^{(n)}): \psi^{(n)} \rceil; \\ \lceil (d'): \delta' \rceil; \dots; \lceil (d^{(n)}): \delta^{(n)} \rceil; \end{array} \right) \right)$$

$$\frac{z_1 x_1^{\xi_1} (x_1 + \dots + x_n)^{\eta_1}}{(1+x_1+\dots+x_n)^{\xi_1+\eta_1}}, \dots, \frac{z_n x_n^{\xi_n} (x_1 + \dots + x_n)^{\eta_n}}{(1+x_1+\dots+x_n)^{\xi_n+\eta_n}}$$

Then the expectation of $G(x_1, \dots, x_n)$ is given by

$$(8.6.2) \quad \langle G(x_1, \dots, x_n) \rangle = F \left(\begin{array}{l} A+1: B'+1; \dots; B^{(n)}+1 \\ C+2: D'; \dots; D^{(n)} \end{array} \left(\begin{array}{l} \lceil (a): \theta', \dots, \theta^{(n)} \rceil; \\ \lceil (c): \phi', \dots, \phi^{(n)} \rceil; \\ \lceil \mu_1 + \dots + \mu_n : \eta_1 + \xi_1, \dots, \eta_n + \xi_n \rceil; \lceil (b'): \psi' \rceil, \lceil \mu_1 : \xi_1 \rceil; \dots; \lceil (b^{(n)}): \psi^{(n)} \rceil; \\ \lceil \mu_1 + \dots + \mu_n : \xi_1, \dots, \xi_n \rceil, \lceil \mu_1 + \dots + \mu_n : \eta_1 + \xi_1, \dots, \eta_n + \xi_n \rceil; \lceil (d'): \delta' \rceil; \\ \lceil \mu_n : \xi_n \rceil; \\ \dots; \lceil (d^{(n)}): \delta^{(n)} \rceil; \end{array} \right) \right)$$

z_1, \dots, z_n

where

$$1 + \sum_{j=1}^C \frac{\alpha_j^{(i)}}{j} + \sum_{j=1}^{D(i)} \frac{s_j^{(i)}}{j} - \sum_{j=1}^A \frac{\theta_j^{(i)}}{j} - \sum_{j=1}^{B(i)} \frac{\phi_j^{(i)}}{j} + \gamma_1 - \gamma_i > 0,$$

$i=1, \dots, n$.

8.7 Moment Generating Function (M.G.F.)

For Gamma Distribution

The m.g.f. is defined as

$$(8.7.1) \quad M(t_1, \dots, t_n) = \int_{-\infty}^{\infty} \dots \int_{-\infty}^{\infty} e^{x_1 t_1 + \dots + x_n t_n} f(x_1, \dots, x_n) dx_1 \dots dx_n,$$

provided that the integral is a function of the parameters t_1, \dots, t_n only.

Thus m.g.f. for multivariate gamma distribution (8.3.1) is given by

$$(8.7.2) \quad M(t_1, \dots, t_n) = \frac{\Gamma(\mu_1 + \dots + \mu_n) \lambda^{\mu_1 + \dots + \mu_n}}{\Gamma(\mu_1) \dots \Gamma(\mu_n) \Gamma(\mu_1 + \dots + \mu_n)}.$$

$$\int_0^{\infty} \dots \int_0^{\infty} e^{x_1 t_1 + \dots + x_n t_n} \cdot e^{-(x_1 + \dots + x_n)} (x_1 + \dots + x_n)^{\mu_1 + \dots + \mu_n - 1} x_1^{\mu_1 - 1} \dots x_n^{\mu_n - 1} dx_1 \dots dx_n.$$

Now making an appeal to (8.2.1) and the result due to Srivastava

[48, p.4 (12)]

$$\sum_{m_1, \dots, m_n=0}^{\infty} f(m_1 + \dots + m_n) \frac{x_1^{m_1}}{m_1!} \dots \frac{x_n^{m_n}}{m_n!} = \sum_{M=0}^{\infty} f(M) \frac{(x_1 + \dots + x_n)^M}{M!}, \quad n \geq 1$$

We finally derive

$$(8.7.3) \quad M(t_1, \dots, t_n) = F_D^{(n)} \left[\mu + \mu_1 + \dots + \mu_n, \mu_1, \dots, \mu_n; \mu_1 + \dots + \mu_n; -\frac{t_1}{\lambda} \dots -\frac{t_n}{\lambda} \right],$$

where $F_D^{(n)}$ is Lauricella's fourth multiple hypergeometric

function of several variables [13].

As a special case for $\mu=0$, (8.7.3) gives

$$(8.7.4) \quad M(t_1, \dots, t_n) = \prod_{i=1}^n \left(1 - \frac{t_i}{\lambda} \right)^{-\mu_i}.$$

8.8 Moments for Gamma Distribution

The moment μ_{r_1, \dots, r_n}^1 for gamma distribution about

$(0, 0, \dots, 0)$ of order r_1, \dots, r_n is defined as the coefficient of

$\frac{t_1^{r_1}}{r_1!} \dots \frac{t_n^{r_n}}{r_n!}$ in $M(t_1, \dots, t_n)$ when it is expanded in

powers of t_1, \dots, t_n .

Thus an appeal to (8.2.1) gives

$$(8.8.1) \quad \mu_{r_1, \dots, r_n}^i = \frac{(\mu_1)_{r_1} \dots (\mu_n)_{r_n} (\mu + \mu_1 + \dots + \mu_n)_{r_1 + \dots + r_n}}{(\mu_1 + \dots + \mu_n)_{r_1 + \dots + r_n} \lambda^{r_1 + \dots + r_n}}$$

8.9 Moment For Beta Distribution

The moment μ_{r_1, \dots, r_n}^i of density function $F(x_1, \dots, x_n)$ about $(0, \dots, 0)$ for beta distribution is defined as

$$(8.9.1) \quad \mu_{r_1, \dots, r_n}^i = \int_{-\infty}^{\infty} \dots \int_{-\infty}^{\infty} x_1^{r_1} \dots x_n^{r_n} F(x_1, \dots, x_n) dx_1 \dots dx_n$$

Now substituting the value of $F(x_1, \dots, x_n)$ from (8.5.1) in

(8.9.1) and making an appeal to (8.2.1) and (8.2.3), we

finally derive

$$(8.9.2) \quad \mu_{r_1, \dots, r_n}^i = \frac{\Gamma(\alpha + \lambda - (r_1 + \dots + r_n))}{\Gamma(\lambda) \Gamma(\alpha + \mu_1 + \dots + \mu_n)} \frac{(\mu_1)_{r_1} \dots (\mu_n)_{r_n}}{(\mu_1 + \dots + \mu_n)_{r_1 + \dots + r_n}}$$

8.10 Special Cases

For $n=1$, from (8.7.3), we derive the following

m.g.f. for gamma distribution :

$$(8.10.1) \quad M(t_1) = \left(1 - \frac{t_1}{\lambda}\right)^{-\mu + \mu_1}$$

For $n=1$, from (8.9.1), we obtain following moment of r_1 th order about origin for gamma distribution :

$$(8.10.2) \quad \mu'_{r_1} = \frac{(\mu + \mu_1)_{r_1}}{\lambda^{r_1}} .$$

Also for $n=1$, (8.9.2) gives following moment of r_1 th order for beta distribution

$$(8.10.3) \quad \mu'_{r_1} = \frac{\Gamma(\alpha + \lambda - r_1)}{\Gamma(\lambda) \Gamma(\alpha + \mu_1)} .$$

Now for special interest, we shall discuss the applications of other multiple hypergeometric functions of several variables in Statistics in next chapter .

APPLICATIONS OF OTHER MULTIPLE HYPERGEOMETRIC
FUNCTIONS OF SEVERAL VARIABLES IN STATISTICS

9.1 Introduction . Exton [7, p.222] studied many special multivariate distributions having expectations in terms of Lauricella's multiple hypergeometric functions [10]. In the previous chapter VIII, we obtained some density functions associated with the multivariate gamma and beta distributions and made their applications to derive the expectations involving multiple hypergeometric functions of Srivastava and Daoust [11].

Motivated by the above work for special interest, here in the present chapter, we discuss some multivariate beta and gamma distributions and make their applications to derive some expectations of different functions in terms of multiple hypergeometric functions $(k)_{E(n)}^{(1) D}$, $(k)_{E(n)}^{(2) D}$ of Exton [5,7], $(k)_{E(n)}^{(1) C}$ of Chandel [1], $(k)_{F(n)}^{AD}$, $(k)_{F(n)}^{BD}$ of Chandel and Gupta [3] and $(k)_{F(n)}^{CD}$ of Karlsson [9] and their confluent forms introduced by Chandel and Gupta [3] (Also see Gupta [3] and Chandel and Vishwakarma [4]).

9.2 Expectations of different functions related to multivariate beta distributions

The expectation for the function $g(x_1, \dots, x_n)$ having multivariate density function $f(x_1, \dots, x_n)$ is defined as

$$(9.2.1) \quad \langle g(x_1, \dots, x_n) \rangle = \int_{-\infty}^{\infty} \dots \int_{-\infty}^{\infty} f(x_1, \dots, x_n) \cdot g(x_1, \dots, x_n) \cdot dx_1 \dots dx_n$$

We consider the density function

$$(9.2.2) \quad f_1(x_1, \dots, x_n) = x_1^{b_1-1} \dots x_n^{b_n-1} (1-x_1-\dots-x_k)^{c-b_1-\dots-b_k-1} \cdot (1-x_{k+1}-\dots-x_n)^{c'-b_{k+1}-\dots-b_n-1} \frac{\Gamma(c) \Gamma(c')}{\Gamma(b_1) \dots \Gamma(b_n) \Gamma(c-b_1-\dots-b_k) \Gamma(c'-b_{k+1}-\dots-b_n)}$$

provided that $0 \leq x_1, \dots, 0 \leq x_n$, $x_1 + \dots + x_k \leq 1$, $x_{k+1} + \dots + x_n \leq 1$

and real parts of c , c' , $c-b_1-\dots-b_k$ and $c'-b_{k+1}-\dots-b_n$ are

positive and $f_1=0$ elsewhere;

and another density function

$$(9.2.3) \quad f_2(x_1, \dots, x_n) = x_1^{b_1-1} \dots x_n^{b_n-1} (1-x_1-\dots-x_k)^{c-b_1-\dots-b_k-1} \cdot (1-x_{k+1})^{c_{k+1}-b_{k+1}-1} \dots (1-x_n)^{c_n-b_n-1} \frac{\Gamma(c) \Gamma(c_{k+1}) \dots \Gamma(c_n)}{\Gamma(b_1) \dots \Gamma(b_n) \Gamma(c-b_1-\dots-b_k)} \cdot \frac{1}{\Gamma(c_{k+1}-b_{k+1}) \dots \Gamma(c_n-b_n)}$$

where $x_1 + \dots + x_k \leq 1$, $0 \leq x_r \leq 1$, $r = 1, \dots, n$.

$\operatorname{Re}(c) > \operatorname{Re}(b_1 + \dots + b_k)$, $\operatorname{Re}(b_j) > 0$, $j = 1, \dots, k$,

$\operatorname{Re}(c_i) > \operatorname{Re}(b_i) > 0$, $i \in \{k+1, \dots, n\}$, and $f_2 = 0$, else where .

Corresponding to density function f_1 defined by (9.2.2),

consider the function

$$(9.2.4) \quad g_1(x_1, \dots, x_n) = (1 - x_1 \alpha_1 - \dots - x_n \alpha_n)^{-a} .$$

Now putting the value of f_1 and g_1 from (9.2.2) and (9.2.4)

respectively in (9.2.1) and making an appeal to the result due

to Exton [7, p. 93, (3.4.2.4)] we obtain the expectation

for $g_1(x_1, \dots, x_n)$ having density function $f_1(x_1, \dots, x_n)$

$$(9.2.5) \quad \langle g_1(x_1, \dots, x_n) \rangle = \frac{(k)_E(n)}{(1)_D} [a, b_1, \dots, b_n; c, c'; x_1, \dots, x_n]$$

where $\frac{(k)_E(n)}{(1)_D}$ is multiple hypergeometric function related to

Lauricella's $F_D^{(n)}$ introduced by Exton [5] .

Further putting the values of f_2 and g_1 from (9.2.3)

and (9.2.4) respectively in (9.2.1) and making an appeal to the

result due to Karlsson [9, (3.2)] , we derive the following

expectation value of g_1 corresponding to density function f_2 ;

$$(9.2.6) \quad \langle g_1(x_1, \dots, x_n) \rangle = \frac{(k)_{F(n)}}{AD} \left[a, b_1, \dots, b_n; c, c_{k+1}, \dots, c_n; \alpha_1, \dots, \alpha_n \right]$$

where $\frac{(k)_{F(n)}}{AD}$ is one of the intermediate Lauricella's multiple hypergeometric function introduced by Chandel and Gupta [3].

We now consider the density function

$$(9.2.7) \quad f_3(x_1, \dots, x_n) = x_1^{b_1-1} \dots x_n^{b_n-1} (1-x_1-\dots-x_n)^{c-b_1-\dots-b_n-1} \cdot \frac{\Gamma(c)}{\Gamma(b_1) \dots \Gamma(b_n) \Gamma(c-b_1-\dots-b_n)}$$

provided that $0 \leq x_1, \dots, 0 \leq x_n$, $x_1 + \dots + x_n \leq 1$ and all the real parts of c and $c-b_1-\dots-b_n$ are positive, and $f_3=0$ elsewhere.

Consider

$$(9.2.8) \quad g_2(x_1, \dots, x_n) = (1-\alpha_1 x_1 - \dots - \alpha_k x_k)^{-a} (1-\alpha_{k+1} x_{k+1} - \dots - \alpha_n x_n)^{-a'}$$

Then putting these values of f_3 and g_2 from (9.2.7) and (9.2.8) respectively in (9.2.1) and making an appeal to the result due to **Exton** [7, p. 93, (3.4.2.5)],

we derive the following expectation of g_2 corresponding to

density function f_3

$$(9.2.9) \quad \langle g_2(x_1, \dots, x_n) \rangle = \frac{(k)_{E(n)}}{(2)_{D}} \left[a, a', b_1, \dots, b_n; c; \alpha_1, \dots, \alpha_n \right]$$

where $\frac{(k)_{E(n)}}{(2)_{D}}$ is another multiple hypergeometric function related to Lauricella's $F_D^{(n)}$, introduced by Exton [5]

Consider the function

$$(9.2.10) \quad g_3(x_1, \dots, x_n) = (1 - \alpha_1 x_1 - \dots - \alpha_k x_k)^{-a} (1 - \alpha_{k+1} x_{k+1})^{-a_{k+1}} \dots (1 - \alpha_n x_n)^{-a_n}$$

Now putting the values of f_3 and g_3 from (9.2.7) and (9.2.10) respectively in (9.2.1) and making an appeal to the result due to Karlsson [9, (3.1)], we get the expectation values of g_3 corresponding to the function f_3

$$(9.2.11) \quad \langle g_3(x_1, \dots, x_n) \rangle = \frac{(k)_{F(n)}}{BD} \left[a, a_{k+1}, \dots, a_n, b_1, \dots, b_n; c; \alpha_1, \dots, \alpha_n \right]$$

where $\frac{(k)_{F(n)}}{BD}$ is one of intermediate Lauricella's multiple hypergeometric functions due to Chandel and Gupta [3].

9.3 Expectations of different multiple hypergeometric functions related to Multivariate gamma distribution

In this section, we discuss some density functions

associated with gamma distributions and derive some expectations in involving multiple hypergeometric function.

We consider the density function

$$(9.3.1) \quad f(x, y, z) = \frac{1}{\Gamma(a) \Gamma(a') \Gamma(b)} e^{-x-y-z} x^{a-1} y^{a'-1} z^{b-1}$$

provided that $0 \leq x, y, z < \infty$, $\operatorname{Re}(a), \operatorname{Re}(a') > 0$, $\operatorname{Re}(b) > 0$, and $f(x, y, z) = 0$, else where.

Consider another function

$$(9.3.2) \quad g(x, y, z) = {}_0F_1 \left[-; c_1; x_1 xz \right] \dots {}_0F_1 \left[-; c_k; x_k xz \right] \cdot {}_0F_1 \left[-; c_{k+1}; x_{k+1} yz \right] \dots {}_0F_1 \left[-; c_n; x_n yz \right].$$

Now making an appeal to the result due to Exton [7, p. 96(3.4.(4.6))], we derive the following expectation value of $g(x, y, z)$ corresponding to the function $f(x, y, z)$

$$(9.3.3) \quad \langle g(x, y, z) \rangle = \frac{(k)_E^{(n)}}{(1)_C} (a, a', b; c_1, \dots, c_n; x_1, \dots, x_n),$$

where $\frac{(k)_E^{(n)}}{(1)_C}$ is multiple hypergeometric function related to

Lauricella's $F_C^{(n)}$ introduced by Chandel [1].

Now consider the density function

$$(9.3.4) \quad f(y, x_1, \dots, x_n) = \frac{1}{\Gamma(a) \Gamma(b_1) \dots \Gamma(b_n)} e^{-y-x_1-\dots-x_n} y^{a-1} x_1^{b_1-1} \dots x_n^{b_n-1}$$

provided that $0 \leq y, x_1, \dots, x_n < \infty$ and $\operatorname{Re}(a) > 0$, $\operatorname{Re}(b_i) > 0$, $i=1, \dots, n$ and $f=0$ else where.

Take

$$(9.3.5) \quad g(y, x_1, \dots, x_n) = {}_0F_1 \left[-; c; \alpha_1 x_1 y + \dots + \alpha_k x_k y \right],$$

$${}_0F_1 \left[-; c; \alpha_{k+1} y + \dots + \alpha_n x_n y \right].$$

Now putting the values of f and g from (9.3.4) and (9.3.5) respectively in (9.2.1) and making an appeal to the result due to Chandel and Gupta [2, (2.2)],

we obtain the following expectation:

$$(9.3.6) \quad \langle g(y, x_1, \dots, x_n) \rangle = \frac{{}_k E^{(n)}(1)}{(1) D} \left[a, b_1, \dots, b_n; c, c'; \alpha_1, \dots, \alpha_n \right].$$

Now we consider the density function

$$(9.3.7) \quad f(z, y, x_1, \dots, x_n) = \frac{1}{\Gamma(a) \Gamma(a') \Gamma(b_1) \dots \Gamma(b_n)} e^{-z-y-x_1-\dots-x_n} z^{a-1} y^{a'-1} x_1^{b_1-1} \dots x_n^{b_n-1},$$

where $0 \leq z, y, x_1, \dots, x_n < \infty$ and all $\operatorname{Re}(a)$, $\operatorname{Re}(a')$,

$\operatorname{Re}(b_1)$, \dots , $\operatorname{Re}(b_n) > 0$; and $f=0$ else where.

Consider the function

$$(9.3.8) \quad g(z, y, x_1, \dots, x_n) = {}_0F_1 \left[-; c; (\alpha_1 x_1 + \dots + \alpha_k x_k) z + (\alpha_{k+1} x_{k+1} + \dots + \alpha_n x_n) y \right].$$

Now putting the values of f and g from (9.3.7) and (9.3.8) respectively in (9.2.1) and then making an appeal to the result due to Chandel and Gupta [2, (2.3)], we get the following expectation of g corresponding to the function f :

$$(9.3.9) \quad \langle g(z, y, x_1, \dots, x_n) \rangle = \frac{(k)_E(n)}{(2)_D} \left[a, a', b_1, \dots, b_n; c; \alpha_1, \dots, \alpha_n \right]$$

Consider the density function

$$(9.3.10) \quad f(x, x_{k+1}, \dots, x_n, y_1, \dots, y_n)$$

$$= \frac{1}{\Gamma(a) \Gamma(a_{k+1}) \dots \Gamma(a_n) \Gamma(b_1) \dots \Gamma(b_n)} x^{a-1} x_{k+1}^{a_{k+1}-1} \dots x_n^{a_n-1} y_1^{b_1-1} \dots y_n^{b_n-1} e^{-(x+x_{k+1} + \dots + x_n + y_1 + \dots + y_n)},$$

where $0 \leq x, x_{k+1}, \dots, x_n, y_1, \dots, y_n < \infty$ and $\text{Re}(a) > 0, \text{Re}(a_i) > 0, i = k+1, \dots, n; \text{Re}(b_j) > 0, j = 1, \dots, n$ and $f = 0$ else where.

Consider another function

$$(9.3.11) \quad g(x, x_{k+1}, \dots, x_n, y_1, \dots, y_n) = {}_0F_1 \left[-; c; \alpha_1 x y + \dots + \alpha_k y_k x + \alpha_{k+1} x_{k+1} y_{k+1} + \dots + \alpha_n x_n y_n \right]$$

Now putting the values of f and g from (9.3.10) and (9.3.11) respectively in (9.2.1) and making an appeal to the result due to Chandel and Gupta [3(5.5)], we obtain the following expectation of g having density function f

$$(9.3.12) \quad \langle g(x, x_{k+1}, \dots, x_n, y_1, \dots, y_n) \rangle = {}^{(k)}_{BD} F^{(n)} \left[a, a_{k+1}, \dots, a_n, b_1, \dots, b_n; c; \alpha_1, \dots, \alpha_n \right]$$

We consider another density function

$$(9.3.13) \quad f(z, y, x_1, \dots, x_k) = \frac{1}{\Gamma(a) \Gamma(b) \Gamma(b_1) \dots \Gamma(b_k)} e^{-z-y-x_1-\dots-x_k} z^{a-1} y^{b-1} x_1^{b_1-1} \dots x_k^{b_k-1},$$

provided that $0 \leq z, y, x_1, \dots, x_k < \infty$ and $\operatorname{Re}(a) > 0$, $\operatorname{Re}(b) > 0$, $\operatorname{Re}(b_i) > 0$, $i = 1, \dots, k$ also $f = 0$, else where.

Further consider the function

$$(9.3.14) \quad g(z, y, x_1, \dots, x_k) = {}_0F_1 \left[-; c; zx_1\alpha_1 + \dots + zx_k\alpha_k \right] {}_0F_1 \left[-; c_{k+1}; zy\alpha_{k+1} \right] \dots {}_0F_1 \left[-; c_n; zy\alpha_n \right]$$

Now putting the values of f and g from (9.3.13) and (9.3.14) respectively in (9.2.1) and applying the result due to Chandel and Vishwakarma [4, p.178(3.9)], we derive corresponding Expectation of g

$$(9.3.15) \quad \langle g(z, v, x_1, \dots, x_n) \rangle = {}_{CD}^{(k)}F_{(n)}^{(n)} \left[\begin{matrix} a, b, b_1, \dots, b_k; c, c_{k+1}, \dots, c_n; \\ \alpha_1, \dots, \alpha_n \end{matrix} \right]$$

where ${}_{CD}^{(k)}F_{(n)}^{(n)}$ is fourth possible intermediate Lauricella's multiple hypergeometric function due to Karlsson [9].

9.4 Expectations involving Confluent multiple hypergeometric functions related to multivariate Gamma distribution

Consider the density function

$$(9.4.1) \quad f(y, z) = \frac{1}{\Gamma(a) \Gamma(b)} y^{a-1} z^{b-1} e^{-(y+z)},$$

$\operatorname{Re}(a) > 0$, $\operatorname{Re}(b) > 0$, $0 \leq y, z < \infty$ and $f(y, z) = 0$, else where.

Further consider

$$(9.4.2) \quad g(y, z) = {}_0F_1 \left[\begin{matrix} -; c; y\alpha_1 + \dots + y\alpha_k \end{matrix} \right] {}_0F_1 \left[\begin{matrix} -; c_{k+1}; yz\alpha_{k+1} \end{matrix} \right] \dots \\ {}_0F_1 \left[\begin{matrix} -; c_n; yz\alpha_n \end{matrix} \right].$$

The expectation for $g(y, z)$ corresponding to the function $f(y, z)$ is given by

$$(9.4.3) \quad \langle g(y, z) \rangle = {}_{(1)}^{(k)}\hat{F}_{CD}^{(n)} \left[\begin{matrix} a, b; c, c_{k+1}, \dots, c_n; \alpha_1, \dots, \alpha_n \end{matrix} \right].$$

Consider the density function

$$(9.4.4) \quad f_1(y, x_1, \dots, x_n) = \frac{1}{\Gamma(a) \Gamma(b_1) \dots \Gamma(b_k)} e^{-(y+x_1+\dots+x_k)} y^{a-1} x_1^{b_1-1} \dots x_k^{b_k-1},$$

$\operatorname{Re}(a) > 0$, $\operatorname{Re}(b_i) > 0$, $i=1, \dots, k$.

All $0 \leq y, x_1, \dots, x_k < \infty$ and $f_1(y, x_1, \dots, x_k) = 0$, else where .

Further consider

$$(9.4.5) \quad \langle g(y, x_1, \dots, x_k) \rangle = {}_0F_1 \left[-; c; \alpha_1 x_1 y + \dots + \alpha_k x_k y \right] {}_0F_1 \left[-; c_{k+1}; y^{\alpha_{k+1}} \right] \dots {}_0F_1 \left[-; c_n; y^{\alpha_n} \right],$$

$0 \leq y < \infty$, $\alpha_{k+1}, \dots, \alpha_n$ are any real numbers , c, c_{k+1}, \dots, c_n are neither zero nor negative integers .

Now making an appeal to the result due to Chandel and Vishwakarma

[4 (3.11)] ,

we derive the expectation

$$(9.4.6) \quad \langle g(y, x_1, \dots, x_k) \rangle = \frac{(k)_{\phi}^{(n)}}{(2)_{CD}} \left[a, b_1, \dots, b_k; c, c_{k+1}, \dots, c_n; \alpha_1, \dots, \alpha_n \right]$$

Now consider the density function

$$(9.4.7) \quad f_2(y, x_1, \dots, x_k) = \frac{1}{\Gamma(a) \Gamma(b_1) \dots \Gamma(b_k)} \cdot e^{-(y+x_1+\dots+x_k)} \cdot y^{a-1} x_1^{b_1-1} \dots x_k^{b_k-1}, \quad 233$$

$$\operatorname{Re}(a) > 0, \quad \operatorname{Re}(b_i) > 0, \quad i=1, \dots, k; \quad 0 \leq y, x_1, \dots, x_k < \infty$$

$$f_2(y, x_1, \dots, x_k) = 0, \quad \text{else where.}$$

Take

$$(9.4.8) \quad g(y, x_1, \dots, x_k) = {}_0F_1 \left[-; c; \alpha_1 x_1 + \dots + \alpha_k x_k \right] {}_0F_1 \left[-; c_{k+1}; \alpha_{k+1} y \right] \dots {}_0F_1 \left[-; c_n; \alpha_n y \right],$$

Now making an appeal to the result due to Chandel and Vishwakarma

[4, (3.12)], we derive the expectation

$$(9.4.9) \quad \langle g(y, x_1, \dots, x_n) \rangle = \frac{(k)! \Gamma(n)}{(3)! \Gamma(n)} \left[a, b, b_1, \dots, b_k; c; c_{k+1}, \dots, c_n; \alpha_1, \dots, \alpha_n \right].$$

Consider the density function

$$(9.4.10) \quad f(y, z, x_1, \dots, x_k) = \frac{1}{\Gamma(a) \Gamma(b) \Gamma(b_1) \dots \Gamma(b_k)} \cdot e^{-(y+z+x_1+\dots+x_k)} \cdot y^{a-1} z^{b-1} x_1^{b_1-1} \dots x_k^{b_k-1},$$

$$0 \leq y, z, x_1, \dots, x_k < \infty, \quad \operatorname{Re}(a) > 0, \quad \operatorname{Re}(b) > 0, \quad \operatorname{Re}(b_i) > 0,$$

$$i = 1, \dots, k \text{ and } f(z, y, x_1, \dots, x_k) = 0, \quad \text{else where}$$

and take corresponding function

$$(9.4.11) \quad g(y, z, x_1, \dots, x_k) = e^{yz(\alpha_{k+1} + \dots + \alpha_n)} {}_0F_1 \left[\begin{matrix} - \\ -; c \end{matrix}; y\alpha_1 x_1 + \dots + y\alpha_k x_k \right]$$

where all $\alpha_i, (i=1, \dots, n)$ are any real numbers.

Then the expectation for the function g with density function f is given by

$$(9.4.12) \quad \langle g(y, z, x_1, \dots, x_k) \rangle = \frac{(k)! \Gamma(n)}{(4)!_{CD}} \left[\begin{matrix} a, b, b_1, \dots, b_k; c; \alpha_1, \dots, \alpha_n \end{matrix} \right]$$

Consider the density function

$$(9.4.13) \quad f(y, z) = \frac{1}{\Gamma(a) \Gamma(b)} e^{-(y+z)} y^{a-1} z^{b-1},$$

$\operatorname{Re}(a) > 0$, $\operatorname{Re}(b) > 0$, $0 \leq y, z < \infty$ and $f(y, z) = 0$, elsewhere.

and another function

$$(9.4.14) \quad g(y, z) = {}_0F_1 \left[\begin{matrix} - \\ -; c_1 \end{matrix}; \alpha_1 yz \right] \dots {}_0F_1 \left[\begin{matrix} - \\ -; c_k \end{matrix}; \alpha_k yz \right] \cdot {}_0F_1 \left[\begin{matrix} - \\ -; c_{k+1} \end{matrix}; \alpha_{k+1} y \right] \dots {}_0F_1 \left[\begin{matrix} - \\ -; c_n \end{matrix}; \alpha_n y \right],$$

$\alpha_1, \dots, \alpha_n$ are any real numbers and c_1, \dots, c_n are neither zero nor negative integers.

Thus the expectation of $g(y, z)$ having density function $f(y, z)$ is given by

$$(9.4.15) \quad \langle g(y, z) \rangle = \frac{(k)! \Gamma(n)}{(1)!_{AC}} \left[\begin{matrix} a, b; c_1, \dots, c_n; \alpha_1, \dots, \alpha_n \end{matrix} \right]$$

Consider the density function

$$(9.4.16) \quad f(y) = \frac{1}{\Gamma(a)} \cdot e^{-y} y^{a-1},$$

$\operatorname{Re}(a) \geq 0$, $0 \leq y < \infty$, and $f(y) = 0$, else where.

Take another function

$$(9.4.17) \quad g(y) = {}_0F_1 \left[-; c_1; \alpha_1 y \right] \cdots {}_0F_1 \left[-; c_k; \alpha_k y \right] \cdot {}_1F_1 \left[b_{k+1}; c_{k+1}; \alpha_{k+1} y \right] \cdots {}_1F_1 \left[b_n; c_n; \alpha_n y \right],$$

$0 \leq y < \infty$, $\alpha_1, \dots, \alpha_n$ are any real numbers and c_1, \dots, c_n are neither zero nor negative integers,

Then the expectation of $g(y)$ having density function $f(y)$ is given by

$$(9.4.18) \quad \langle g(y) \rangle = \frac{(k)! \Gamma^{(n)}(n)}{(2)! \Gamma_{AC}} \left[a, b_{k+1}, \dots, b_n; c_1, \dots, c_n; \alpha_1, \dots, \alpha_n \right]$$

Consider the probability density function

$$(9.4.19) \quad f(y, z) = \frac{\Gamma(c)}{2\pi i \Gamma(a)} \cdot e^{-y+z} y^{a-1} z^{-c},$$

$\operatorname{Re}(a) > 0$, $\operatorname{Re}(c) > 0$, b_1, \dots, b_k are negative integers

$0 \leq y < \infty$, $-\infty \leq z \leq 0$ and $f(y, z) = 0$, else where.

Consider another function

$$(9.4.20) \quad g(y, z) = \left(1 - \frac{\alpha_1 y}{z}\right)^{-b_1} \dots \left(1 - \frac{\alpha_k y}{z}\right)^{-b_k} \left(1 - \alpha_{k+1} z\right)^{-b_{k+1}} \dots \left(1 - \alpha_n z\right)^{-b_n},$$

$\alpha_1, \dots, \alpha_n$ are real numbers, b_{k+1}, \dots, b_n are negative integers.

Then the expectation for $g(y, z)$ having density function $f(y, z)$ is given by

$$(9.4.21) \quad \langle g(y, z) \rangle = \frac{(k) \Gamma(n)}{(1) \Gamma_{AD}} \left[a, b_1, \dots, b_n; c; \alpha_1, \dots, \alpha_n \right].$$

Consider the density function

$$(9.4.22) \quad f(y, z_1, \dots, z_n) = \frac{1}{\Gamma(a) \Gamma(b_1) \dots \Gamma(b_n)} \cdot e^{-(y+z_1+\dots+z_n)} \cdot y^{a-1} z_1^{b_1-1} \dots z_n^{b_n-1},$$

$\operatorname{Re}(a) > 0$, $\operatorname{Re}(b_i) > 0$, $i = 1, \dots, n$; $0 \leq y, z_1, \dots, z_n < \infty$ and $f(y, z_1, \dots, z_n) = 0$, else where.

Take

$$(9.4.23) \quad g(y, z_1, \dots, z_n) = {}_0F_1 \left[-; c; \alpha_1 z_1 y + \dots + \alpha_k z_k y + \alpha_{k+1} z_{k+1} + \dots + \alpha_n z_n \right].$$

Thus the expectation for $f(y, z_1, \dots, z_n)$ having density function $g(y, z_1, \dots, z_n)$ is given by

$$(9.4.24) \langle g(y, z_1, \dots, z_n) \rangle = \frac{(k) \phi^{(n)}}{(1) \text{BD}} \int a, b_1, \dots, b_n; c; \alpha_1, \dots, \alpha_n \int .$$

Consider the density function

$$(9.4.25) \quad f(z_1, \dots, z_n, y_{k+1}, \dots, y_n) = \frac{1}{\Gamma(a_{k+1}) \dots \Gamma(a_n) \Gamma(b_1) \dots \Gamma(b_n)} \cdot \\ \exp \int -(z_1 + \dots + z_n + y_{k+1} + \dots + y_n) \int y_{k+1}^{a_{k+1}-1} \dots y_n^{a_n-1} \cdot z_1^{b_1-1} \dots z_n^{b_n-1} ,$$

$$\operatorname{Re}(a_i) > 0, \quad \operatorname{Re}(b_j) > 0, \quad i = k+1, \dots, n; \quad j = 1, \dots, n;$$

$$0 \leq z_1, \dots, z_n, y_{k+1}, \dots, y_n < \infty \quad \text{and} \quad f(z_1, \dots, z_n, y_{k+1}, \dots, y_n) = 0$$

else where .

Take

$$(9.4.26) \quad g(z_1, \dots, z_n, y_{k+1}, \dots, y_n) = {}_0F_1 \int -; c; \alpha_1 z_1 + \dots + \alpha_k z_k + \alpha_{k+1} y_{k+1} z_{k+1} + \\ \dots + \alpha_n y_n z_n \int .$$

Thus the expectation for $f(z_1, \dots, z_n, y_{k+1}, \dots, y_n)$ having density function $g(z_1, \dots, z_n, y_{k+1}, \dots, y_n)$ is given by

$$(9.4.27) \quad \langle g(z_1, \dots, z_n, y_{k+1}, \dots, y_n) \rangle = \frac{(k) \phi^{(n)}}{(2) \text{BD}} \int a_{k+1}, \dots, a_n, b_1, \dots, b_n; c; \alpha_1, \dots, \alpha_n \int$$

Consider the density function

$$(9.4.28) \quad f(x, y) = \frac{1}{\Gamma(a) \Gamma(b)} \cdot e^{-(x+y)} x^{a-1} y^{b-1} ,$$

$\operatorname{Re}(a) > 0$, $\operatorname{Re}(b) > 0$, $0 \leq x, y, < \infty$ and $f(x, y) = 0$, else where.

Take

$$(9.4.29) \quad u(x, y) = (1 - \alpha_1 x)^{-b_1} \dots (1 - \alpha_k x)^{-b_k} {}_0F_1 \left[-; c_{k+1}; \alpha_k xy \right] \\ \dots {}_0F_1 \left[-; c_n; \alpha_n xy \right]$$

$0 \leq x, y < \infty$, $\alpha_1, \dots, \alpha_n$ are any real numbers and c_{k+1}, \dots, c_n are neither zero nor negative integers.

Thus the expectation for the function $g(x, y)$ having density function $f(x, y)$ is given by

$$(9.4.30) \quad \langle g(x, y) \rangle = \frac{(k)}{(5)} \int_{CD}^{(n)} \left[a, b, b_1, \dots, b_k; c_{k+1}, \dots, c_n; \alpha_1, \dots, \alpha_n \right].$$

Consider the density function

$$(9.4.31) \quad f(x, y, y_1, \dots, y_k) = e^{-(x+y+y_1+\dots+y_k)} \cdot x^{a-1} \cdot y^{b-1} \cdot y_1^{b_1-1} \dots y_k^{b_k-1},$$

$\operatorname{Re}(a) > 0$, $\operatorname{Re}(b) > 0$, $\operatorname{Re}(b_j) > 0$, $j = 1, \dots, k$; $0 \leq x, y, y_1, \dots, y_k < \infty$

and $f(x, y, y_1, \dots, y_k) = 0$ else where .

Take

$$(9.4.32) \quad g(x, y, y_1, \dots, y_k) = e^{x(y_1 \alpha_1 + \dots + y_k \alpha_k)} \cdot {}_0F_1 \left[-; c_{k+1}; xy \alpha_{k+1} \right] \\ \dots {}_0F_1 \left[-; c_n; xy \alpha_n \right],$$

$0 \leq x, y \leq \infty$, c_{k+1}, \dots, c_n are neither zero nor negative integers while $\alpha_1, \dots, \alpha_n$ are any real numbers.

Thus the expectation for the function $g(x, y)$ having density function $f(x, y, y_1, \dots, y_k)$ is given by

$$(9.1.33) \quad \langle g(x, y) \rangle = \frac{(k)!}{(5)!} \frac{(n)!}{CD} \left[a, b, b_1, \dots, b_k; c_{k+1}, \dots, c_n; \alpha_1, \dots, \alpha_n \right],$$

Consider the density function $f(x)$

$$(9.1.34) \quad f(x) = \frac{1}{\Gamma(a)} \cdot e^{-x} x^{a-1}, \quad \operatorname{Re}(a) > 0, \quad 0 \leq x \leq \infty.$$

Further consider

$$(9.4.35) \quad g(x) = (1 - \alpha_1 x)^{-b_1} \dots (1 - \alpha_k x)^{-b_k} {}_0F_1 \left[-; c_{k+1}; x^{\alpha_{k+1}} \right] \dots {}_0F_1 \left[-; c_n; x^{\alpha_n} \right],$$

c_{k+1}, \dots, c_n are neither zero nor negative integers and $\alpha_1, \dots, \alpha_n$ are any real numbers.

Thus the expectation for the function $g(x)$ having density function $f(x)$ is given by

$$(9.4.36) \quad \langle g(x) \rangle = \frac{(k)!}{(6)!} \frac{(n)!}{CD} \left[a, b_1, \dots, b_k; c_{k+1}, \dots, c_n; \alpha_1, \dots, \alpha_n \right],$$

Consider the density function

$$(9.4.37) \quad f(x, y_1, \dots, y_k) = \frac{1}{\Gamma(a) \Gamma(b_1) \dots \Gamma(b_k)} x^{a-1} y_1^{b_1-1} \dots y_k^{b_k-1}$$

$\operatorname{Re}(a) > 0$, $\operatorname{Re}(b_j) > 0$, $j = 1, \dots, k$, $0 \leq x, y_1, \dots, y_k < \infty$

and $f(x, y_1, \dots, y_k) = 0$, else where .

Take

$$(9.4.38) \quad g(x, y_1, \dots, y_k) = \exp[-x(y_1 \alpha_1 + \dots + y_k \alpha_k)] \cdot {}_0F_1[-; c_{k+1}; \alpha_{k+1} x] \dots {}_0F_1[-; c_n; \alpha_n x] ,$$

c_{k+1}, \dots, c_n are neither zero nor negative integers, while $\alpha_1, \dots, \alpha_n$ are any real numbers.

Thus the expectation for the function $g(x, y_1, \dots, y_k)$ having density function $f(x, y_1, \dots, y_k)$ is given by

$$(9.4.39) \quad \langle g(x, y_1, \dots, y_k) \rangle = \frac{(k)! \Gamma(n)}{(6)!_{CD}} [a, b_1, \dots, b_k; c_{k+1}, \dots, c_n; \alpha_1, \dots, \alpha_n] .$$

Consider the density function

$$(9.4.40) \quad f(x) = \frac{1}{\Gamma(a)} e^{-x} x^{a-1} ,$$

$\operatorname{Re}(a) > 0$, $0 \leq x < \infty$ and $f(x) = 0$, else where .

Further Consider

$$(9.4.41) \quad g(x) = \prod_{j=1}^k (1 - \alpha_j x)^{-b_j} {}_1F_1[b_{k+1}; c_{k+1}; \alpha_{k+1} x] \dots {}_1F_1[b_n; c_n; \alpha_n x]$$

$b_i, \alpha_i, \{i=1, \dots, n\}$ are any real numbers and c_{k+1}, \dots, c_n are neither zero nor negative integers

Then the expectation for $g(x)$ having density function $f(x)$ is given by

$$(9.4.42) \quad \langle g(x) \rangle = \frac{\binom{k}{2} \Gamma(n)}{\Gamma(a) \Gamma(b_1) \dots \Gamma(b_n)} \int_a^\infty \int_{b_1}^\infty \dots \int_{b_n}^\infty g(x) f(x, y_1, \dots, y_n) dx dy_1 \dots dy_n.$$

Consider the density function

$$(9.4.43) \quad f(x, y_1, \dots, y_n) = \frac{1}{\Gamma(a) \Gamma(b_1) \dots \Gamma(b_n)} e^{-(x+y_1+\dots+y_n)} x^{a-1} y_1^{b_1-1} \dots y_n^{b_n-1},$$

$\operatorname{Re}(a) > 0$, $\operatorname{Re}(b_j) > 0$; $j = 1, \dots, n$, $0 \leq x, y_1, \dots, y_n < \infty$,

$\alpha_1, \dots, \alpha_k$ are any real numbers and $f(x, y_1, \dots, y_n) = 0$, else where.

$$(9.4.44) \quad g(x, y_1, \dots, y_n) = e^{x(\alpha_1 y_1 + \dots + \alpha_k y_k)} {}_0F_1 \left[-; c_{k+1}; \alpha_{k+1} y_{k+1} x \right] \dots {}_0F_1 \left[-; c_n; \alpha_n y_n x \right]$$

where $c_j (j=k+1, \dots, n)$ are neither zero nor negative integers while $c_j (j=1, \dots, k)$ are any real numbers.

Then the expectation for $g(x, y_1, \dots, y_n)$ having density function $f(x, y_1, \dots, y_n)$ is given by

$$(9.4.45) \quad \langle g(x, y_{k+1}, \dots, y_n) \rangle = \frac{(k) \tilde{\phi}^{(n)}}{(2) I_{AD}} \left[a, b_1, \dots, b_n; c_{k+1}, \dots, c_n; \alpha_1, \dots, \alpha_n \right]$$

Consider the density function

$$(9.4.46) \quad f(x, y_1, \dots, y_k, x_{k+1}, \dots, x_n) = \frac{1}{\Gamma(a) \Gamma(b_1) \dots \Gamma(b_k) \Gamma(a_{k+1}) \dots \Gamma(a_n)} \cdot e^{-(x+y_1+\dots+y_k+x_{k+1}+\dots+x_n)} \cdot x^{a-1} \cdot \prod_{i=1}^k y_i^{b_i-1} \cdot \prod_{j=k+1}^n x_j^{a_j-1},$$

$$\operatorname{Re}(a) > 0, \quad \operatorname{Re}(b_i) > 0, \quad i = 1, \dots, k, \quad \operatorname{Re}(a_j) > 0, \quad j = k+1, \dots, n.$$

$$0 \leq x, y_1, \dots, y_k, x_{k+1}, \dots, x_n < \infty \text{ and } f(x, y_1, \dots, y_k, x_{k+1}, \dots, x_n) = 0,$$

else where.

Take

$$(9.4.47) \quad g(x, y_1, \dots, y_k, x_{k+1}, \dots, x_n) = {}_0F_1 \left[\begin{matrix} - \\ c; \end{matrix} \alpha_1 x y_1 + \dots + \alpha_k x y_k + \alpha_{k+1} x_{k+1} + \dots + \alpha_n x_n \right],$$

$$0 \leq x, y_1, \dots, y_k, x_{k+1}, \dots, x_n < \infty, \quad \alpha_1, \dots, \alpha_n \text{ are any real numbers}$$

where c is neither zero nor negative integers.

Then the expectation for $g(x, y_1, \dots, y_k, x_{k+1}, \dots, x_n)$ having density function $f(x, y_1, \dots, y_k, x_{k+1}, \dots, x_n)$ is given by

$$(9.4.48) \quad \langle g(x, y_1, \dots, y_k, x_{k+1}, \dots, x_n) \rangle =$$

$$\frac{(k) \tilde{\phi}^{(n)}}{(3) I_{BD}} \left[a, a_{k+1}, \dots, a_n, b_1, \dots, b_k; c; \alpha_1, \dots, \alpha_n \right].$$

Consider the density function

$$(9.1.49) \quad f(x, y_1, \dots, y_n) = x^{a-1} y_1^{b_1-1} \dots y_n^{b_n-1} e^{-(y_1 + \dots + y_n + x)}$$

$\operatorname{Re}(a) > 0$, $\operatorname{Re}(b_i) > 0$, $i = 1, \dots, n$, $0 \leq x, y_1, \dots, y_n < \infty$ and

$f(x, y_1, \dots, y_n) = 0$, else where.

Take

$$(9.1.50) \quad g(x, y_1, \dots, y_n) = e^{x(\alpha_{k+1} y_{k+1} + \dots + \alpha_n y_n)} {}_0F_1 \left[-; c; \alpha_1 y_1^x, \dots, \alpha_k y_k^x \right],$$

where $\alpha_1, \dots, \alpha_n$ are any real numbers while c is neither zero nor negative integer.

Then the expectation for the function $g(x, y_1, \dots, y_n)$ having density function $f(x, y_1, \dots, y_n)$ is given by

$$(9.4.51) \quad \langle g(x, y_1, \dots, y_n) \rangle = \frac{(k)_n}{(1)_n} {}_1F_1^{(n)} \left[a, b_1, \dots, b_n; c; \alpha_1, \dots, \alpha_n \right]$$

Consider the density function

$$(9.4.52) \quad f(x, y) = \frac{1}{\Gamma(a) \Gamma(b)} e^{-(x+y)} x^{a-1} y^{b-1},$$

$\operatorname{Re}(a) > 0$, $\operatorname{Re}(b) > 0$, $0 \leq x, y < \infty$, and $f(x, y) = 0$, else where.

Take

$$(9.4.53) \quad g(x, y) = {}_0F_1 \left[-; c_1; xy \alpha_1 \right] \dots {}_0F_1 \left[-; c_k; xy \alpha_k \right] \cdot {}_0F_1 \left[-; c_{k+1}; y \alpha_{k+1} \right] \dots {}_0F_1 \left[-; c_n; y \alpha_n \right],$$

$\alpha_1, \dots, \alpha_n$ are any real numbers while c_1, \dots, c_n are neither zero nor negative integers.

Then the expectation for the function $g(x, y)$ having density function $f(x, y)$ is given by

$$(9.4.54) \quad \langle g(x, y) \rangle = \frac{(k) \mathcal{I}^{(n)}_{\phi}}{(1) \mathcal{I}_C} \left[a, b; c_1, \dots, c_n; x_1, \dots, x_n \right].$$

Consider the density function

$$(9.4.55) \quad f(x, y_1, \dots, y_n) = \frac{1}{\Gamma(a) \Gamma(b_1) \dots \Gamma(b_n)} e^{-(x+y_1+\dots+y_n)} x^{a-1} y_1^{b_1-1} \dots y_n^{b_n-1},$$

$\operatorname{Re}(a) > 0$, $\operatorname{Re}(b_j) > 0$, $(j=1, \dots, n)$; $0 \leq x, y_1, \dots, y_n < \infty$ and

$f(x, y_1, \dots, y_n) = 0$, else where.

Take

$$(9.4.56) \quad g(x, y_1, \dots, y_n) = {}_0F_1 \left[-; c; xy_1^{\alpha_1} + \dots + xy_k^{\alpha_k} + y_{k+1}^{\alpha_{k+1}} + \dots + y_n^{\alpha_n} \right],$$

where c is neither zero ^{nor} negative integer.

Then the expectation for the function $g(x, y_1, \dots, y_n)$ having density function $f(x, y_1, \dots, y_n)$ is given by

$$(9.4.57) \quad \langle g(x, y_1, \dots, y_n) \rangle = \frac{(k) \mathcal{I}^{(n)}_{\phi}}{(2) \mathcal{I}_D} \left[a, b_1, \dots, b_n; c; x_1, \dots, x_n \right].$$

9.5 Special Cases

(9.5.1) For $k=0$, from (9.2.5) and (9.2.9), we deduce separately the result due to Exton $\left[7, (7.2.1.5)\right]$.

(9.5.2) For $k=0$, from (9.2.6), we derive the result due to Exton $\left[7, (7.2.3.1)\right]$,

while

(9.5.3) For $k=n$, from (9.2.6), we obtain the result due to Exton $\left[7, (7.2.1.5)\right]$.

(9.5.4) For $k=0$, (9.2.11) gives the result due to Exton $\left[7, (2.2.1.6)\right]$,

while

(9.5.5) For $k=n$, (9.2.11) gives the result due to Exton $\left[7, (7.2.1.5)\right]$.

(9.5.6) Further for $k=0$, from (9.3.6) and (9.3.9), we deduce the result due to Exton $\left[7, (7.2.3.2)\right]$.

Also

(9.5.7) For $k=n$, from (9.3.12) and (9.3.15), we derive the result due to Exton $\left[7, (7.2.3.2)\right]$.

For further special interest, we have also obtained expectations in terms of hypergeometric functions of four variables of Exton $\left[6\right]$ and Sharma and Parihar $\left[12\right]$, but due to lack of space, we do not produce them here.
